I applied myself more closely to the study of heating greenhouses and the best mode of arranging the pipes to secure the most perfect radiation; the result was, I found myself becoming a convert to the overhead system of heating and after reading an article in the FLORIST on steam heating and overhead radiation (page 323, No. 62), I resolved to experiment on it in a small way. Taking out the pipes from under the middle bench in the rose house I placed one pipe over the bench about five feet above it; I started the pipe from the feed pipe where one running under had been taken out and dropped into the same return pipe at the further end of the house—a valve was placed at each end of the high pipe so that the steam could be let on or cut off at pleasure. I soon found that the one pipe gave more heat and a more perfect radiation than the two pipes that had passed under the bench. The result was so satisfactory that I determined to make the change before another winter. In September last I had an entire change made in all three of the houses. The feed pipe was placed above the upper joist in shop nine feet from the floor and connected with the boiler with a 1½-inch pipe. Two parallel pipes two and a half feet apart were carried over the middle bench from the feed pipe to the extreme end of the house, there each divided into two and returned one along the wall behind and above the side benches a few inches below the glass, the other on a line above the outer edge of the middle bench about two feet below the glass. The 10-foot house has one line of pipe running overhead through the house dividing into two returning along the walls back of and above the benches a few inches below the glass. Each house has a separate pipe to return water to the boiler, which are connected and enter the boiler near the bottom. This arrangement gives the two large houses six pipes each and the small one three. Valves were placed in the pipes so that steam may be put on or cut off as the state of the weather or temperature of the houses may require.

For fuel I use natural gas, the greatest boon a kind providence has ever bestowed

on a florist, not only for its convenience, cleanliness and regularity of heating, but for its cheapness. I do not suppose there is another florist in the United States, perhaps in the world, that is warming over 6,000 feet of glass at a cost of \$10 a year. I use an automatic regulator that controls the supply of gas and can be set for any pressure that is required for a certain temperature and it will maintain that temperature until it is changed. Should the weather change the pressure can be increased or decreased as required. When the weather is regular it can be left in the evening and found all right in the morning, doing away with night stoking, which is no small item. The pressure this winter has not exceeded one pound thus far, although there has been no severe weather, yet I feel safe in saying that one more pound will carry the houses through any weather we are likely to have.

After an experience extending this far into the winter I am more fully convinced than ever that overhead radiation is the correct mode of warming houses for the growing of flowering plants. I have never had as healthy and vigorous a growth in plants as this winter; my carnations are far ahead of any I have ever before raised in healthy vigor and profusion of bloom. Roses are in a good healthy condition with less trouble from insects and mildew than ever before. I find that my houses maintain a more uniform temperature as this distribution of the pipes encourages a better circulation of air throughout the entire house so that the temperature of the floor is but little lower than that of the benches, the hottest place being near the glass, and as all cold must come from the roof, in passing through the strata of hot air that it meets in its descent it becomes warmed before it strikes the plants, so that it carries health and vigor to them instead of a chill.

For bottom heat for a cutting bench I attach a $\frac{3}{4}$ -inch pipe to the nearest hot pipe overhead and carry it under a side bench into a $1\frac{1}{2}$ -inch pipe running under the bench the required distance, then return to starting point from where the water is carried to the boilers through a $\frac{1}{2}$ -inch pipe. This plan of piping a house may not be perfect, it may be susceptible of many improvements, but I feel that it is a step towards that perfection that may ultimately be attained and undoubtedly will be as we have in this country many florists who possess a good share of mechanical genius together with practical ideas of cause and effect who will experiment on it until its many advantages are more fully demonstrated; then I think there will be a revolution in the mode of warming houses for the purpose of growing plants.

Findlay, O. M. B. PATTERSON.

A Square Issue.

Mr. Titus' admirable article upon the heating of greenhouses deserves the careful attention of every progressive florist. But there is one point in regard to which I think he is in error, and that is the proper position of the pipes. In deciding the location of the pipes it is necessary to consider the manner in which the air circulates in a greenhouse, a subject that does not seem to be well understood. If a vessel of water is put over a fire, circulation at once commences, the heated water rising up in the center and as it cools sinking down again at the sides

and so on. If instead of placing the vessel over the fire you put a cake of ice in the water circulation will take place in the same manner and will continue as long as the ice remains.

In a greenhouse, which we will suppose to be without heating apparatus or benches, we have, during the forcing season, the coldest air at the top, often the ice itself. We have therefore all the elements of a perfect circulation, which takes place as follows: When two currents of air of different temperatures meet they do not at once mingle but slide over each other, mingling a little at the point of contact; drop a window a little on a cold day and two currents at once commence,

BASKET TRIMMED WITH THE NATIONAL COLORS.

a cold one entering at the bottom of the opening and dropping down inside the sash, and a warm one sliding out over the cold one at the top of the opening.

Suppose the temperature of the greenhouse in the neighborhood of the plants to be 70° with frost forming on the glass; the air in contact with the glass will be cooled at once nearly to frost point, sliding down the glass, passing behind the side benches and spreading out over the floor of the house where it becomes warmed a little by contact with the air just above it and rises slowly as it is forced up by the never ceasing current of cold air. As the air in the upper part of the house becomes cooled and slides down under the glass the warm air in the middle of the house is forced up to take its place. Thus we have a natural and ideally perfect circulation which will be more or less rapid according to the difference in temperature between the outside and inside of the house. This circulation will be even and regular without currents or eddies, except to a small extent next to the glass, and no particle of air can possibly reach the plants without first having acquired the temperature of the surrounding air and that is the one object we all wish to attain.

In placing pipes in a greenhouse it seems clear beyond debate that they should be placed where they cannot interfere with this natural and perfect circulation, and the only place where they can be so placed is overhead; if placed under the benches the circulation is at once broken up. The idea that if the pipes are placed overhead the heat will all remain in the upper part of the house is of course a mistake. It will always be warmer at the top of the house than at

the bottom no matter where the pipes are placed, but as long as it is colder outside than in, the circulation of the entire body of air is assured. The objections to putting pipes under benches are too well known to need repeating; it is the worst place in the house for them. If they must be below they should be in the passageways.

Overhead heating is no longer a mere theoretical device, it is an accomplished fact. Successful cases have been reported in these columns. It not only proves to be better than the old system, but it surpasses the expectations of those who try it. Its advantages are eminently practical. Where the boiler is placed in a cellar it gives a great increase of vertical rise and fall with consequent rapidity of circulation; where no cellar is possible the boiler can be placed on the level of greenhouse floor with a certainty of good circulation; the temperature about the plants will always be even and regular with no currents of superheated air rising from under the benches; the ventilation can be perfectly controlled in all weathers; the cold air entering from the ventilators will have the chill taken off before reaching the plants; the heat radiated downward from the pipes strikes the upper side of the leaves in a natural manner as the heat from the sun does. At least I used to think so, but my ideas upon the subject of radiation received a severe shock from the announcement at the New York meeting of a new and startling discovery in physics. It seems that the heat no longer comes through the glass but is "generated" by the sun at the lowest point that it strikes inside the house. Just how the sun does its generating without coming through the glass was not mentioned, but that is an unimportant detail. I was pleased to notice that the announcement of this brilliant discovery was received with applause—it should have been.

When overhead heating is combined with the open-pressure system, with a water-tube boiler, we have a very perfect arrangement. Steam has no appreciable advantage over it except for long distance heating in large establishments. With 2-inch pipes we can get heat nearly as quick as with steam; steam will develop its full power a little quicker than the water, that is all the difference. On warm days the superfluous heat from overhead pipes can be allowed to escape from the ventilators before it has had a chance to affect the temperature of the air below it.

The question of economy of fuel does not receive the attention it deserves. It ought to be generally understood that any system of heating that depends upon forcing of fires in cold weather for its efficiency is a bad system. Heavy forcing means an enormous waste of fuel. True economy requires that boilers should be run as power boilers are, under fixed conditions. This requires the use of more than one boiler under all circumstances, and the additional heat required by colder weather should be obtained by firing a second boiler and not by forcing the first, which should always be run at the point of greatest economy regardless of weather; and rather than force the second boiler a third should be added.

Water tube boilers of great efficiency, such as have been described in former numbers, can be put together by any steam-fitter, and they are so inexpensive that several can be furnished for the cost of one of the large cast iron boilers. The relative value of steam and hot water is

by no means settled yet and will not be until the improved methods of using the latter come into more general use. It is a curious fact that just as florists are beginning to abandon water for steam, architects are beginning to abandon steam for water. L. W.

Framingham, Mass.

Postage Rates and Cost of Building.

Please publish the postal rates on roots, cuttings, etc. mentioned in a recent issue. Also the probable cost of one such rose house complete as described in January 1 issue, built by Mr. Price, of Lansdowne, Pa. I think a fuller description of the houses in question as to the roof and the way the space inside is divided up, would be useful to many.

Ithaca, N. Y. C. W. WHEELER.

[The postal rate on seeds, bulbs, roots, cuttings and cions is now 8 cents per pound.]

Cost of Building.

Will you kindly inform me through the columns of your valuable paper what would be the cost of a greenhouse made of wood, 300 feet long by 18 feet wide, with sashbars for glass 16x24? Also the probable cost of steam heating apparatus for such a house and oblige.

Boston, Mass. SUBSCRIBER.

[Cost of construction varies so in different parts of the country that only those who have built such houses in the vicinity of Boston could give a reliable answer. Will some Boston man supply the desired information?—ED.]

Crude Petroleum as a Preservative of Wood.

In the FLORIST of October 1, J. G. Burrow stated that petroleum (crude) is a good preserver of wood. I would like to ask through your paper if any one has used it for bottom of benches in greenhouses, and if it has been found satisfactory. J. I.

[It has been so used and we understand that it accomplished the desired object without any injury to plants.—ED.]

Inch Pipes for Heating.

Will those who are using hot water in inch pipes for heating state through the FLORIST what success they have had and how pipes are laid? This system seems to be gaining ground and the experience of those who have tried it will interest many. NEW YORK.

THOS. W. WEATHERED'S SONS, New York, have added a new department to the business. They now undertake the erection of greenhouses complete in any part of the country, as well as supplying heating apparatus for the same. They have on exhibition at their store, at 46 and 48 Marion street, New York, a sample portable greenhouse, also a section of a three quarter span 18-foot rose house with benches and everything complete, for the inspection of intending builders.

TEN-WEEKS STOCKS.—Can these be forced in winter and what temperature is required to bring them to perfection at that season. D. H., JR.

FORCING BULBS.—Will some one kindly inform me through the FLORIST which of the bulbs, after being forced, are worth keeping? A. S. Glenville, Ohio.

News Notes.

NORFOLK, VA.—The Brambleton Floral Co. has made an assignment to M. Metcalf.

HAMILTON, ONT.—Holiday trade larger than last year, quality of flowers and prices realized were about the same. There was an increased call for roses.

COUNCIL BLUFFS, IA.—Holiday trade was very good, Christmas trade in excess of last year, but a considerable falling off in New Year's business. The demand at Christmas was largely in excess of supply.

NEW ORLEANS, LA.—Holiday trade larger than last year, quality of flowers a little inferior, prices trifle lower, supply sufficient to meet demand, loose bunches more in demand than baskets, an increased call for roses.

PEORIA, ILL.—Holiday trade larger than last year, quality of flowers not so good, prices higher, supply sufficient to supply the demand at prices asked. Principal call was for loose flowers. Sales of holly wreaths and green were more than double those of last year.

OAKLAND, CAL.—Holiday trade about equal to last year; quality of flowers better, out-door flowers were more plentiful on account of our mild winter. Good flowers brought better prices, especially roses. The supply was equal to the demand except in good roses. An increased demand was noted for good ornamental and flowering plants. Less demand for baskets and more for loose flowers, and a greater demand for Christmas greens.

JANESVILLE, WIS.—Holiday trade was good; I think full better than last year; flowers were in good supply and brought good prices. Trade in holly larger than ever. Have had more than an average of sunshine this winter, and very little cold weather—first snow to-day. Trade in roses was somewhat restricted owing to the high prices. Four funerals and numerous weddings made the florists busy during Christmas week. January 9.

DETROIT.—Preparations for the flower show to be given April 2-5 are going forward. The daily Journal, under whose auspices the show will be held, is vigorously pushing the project. Twenty-four of the city florists have expressed their intention to compete. The premium list has not yet been issued but will be liberal. Special exhibits from florists in other cities will be solicited, and from the manner in which the exhibition is being advertised it will undoubtedly pay well those who can show novelties or well grown specimens of any plant or flowers at that date, to avail themselves of this opportunity.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED.—As florist; long experience; single. Address W. J. BAILEY, 44 North Third Street, Harrisburg, Pa.

SITUATION WANTED.—By a practical rose grower, also by an assistant. Good references. Address D. A. C. Allegheny P. O. Pa.

SITUATION WANTED.—By a first class rose grower and propagator; best of references given. Address H. M., care American Florist.

SITUATION WANTED.—By thoroughly experienced man; best references; private place preferred. Address BERNARD HOPPE, 55 Law Ave., Chicago.

SITUATION WANTED.—As seedsmen; have a general knowledge of the nursery and floral business. Address T. & F., care American Florist.

SITUATION WANTED.—With a reliable florist. I desire to learn the business thoroughly. Address Miss D. R. BURT, 53 Dearborn St., Chicago, Ill.

SITUATION WANTED.—Either private or commercial place; 12 years' experience in all branches of the business. Address WM. HELLMAN, 308 Maxwell St., Chicago.

SITUATION WANTED.—Commercial or private by a single man, 28 years old; 7 years with Henry A. Dreer, Riverton, to whom he refers. FRANK EBNER, Riverton, N. J.

SITUATION WANTED.—By young man at once, with some good florist to learn the business. Best of references. South preferred. E. V. GOODMAN, 45 N. Front St., Columbus, O.

SITUATION WANTED.—Practical florist of ability and long experience on all the requisites of the business. Private or commercial. For particulars address A. B., care American Florist, Chicago.

SITUATION WANTED.—By a gardener; married; thorough practical knowledge of his profession. Can give very best of reference. Private or commercial. A. T. PETERSON, Riverside, Cook Co., Ill.

SITUATION WANTED.—Florist's foreman or gentleman's gardener; 17 years' experience; best of references; married; temperate man. Address VANDERMEULEN, Wright St., Rochester, N. Y.

SITUATION WANTED.—By assistant gardener; single; 5 years' experience; good references, reliable and willing. Only first-class private place wanted, where able to get a full knowledge of the business. Address F. G. W., East Orange, N. J.

SITUATION WANTED.—A florist and gardener; age 30, with small family who are coming over from Holland, wants a position about the middle of February; is fully acquainted with the business in all its branches. Address H. H. APPELDORN, 133 Cedar St., Norwich, Conn.

SITUATION WANTED.—By a gardener and florist with 18 years' experience, competent in all its branches. Have full charge there now employed 5 years. Can furnish first class recommendations; German, married, small child; private place preferred. Address D 4, care American Florist.

SITUATION WANTED.—By Practical gardener; French; single; age 38; has devoted all his life-time to cultivate the loving nature of plants principally in rose culture can't be beat. Commercial or private. Best of references. Any person wishing such a man, address E. L., care American Florist.

WANTED.—Wholesale price lists of roses, plants, etc. BAKER BROTHERS, Fort Worth, Texas.

WANTED.—Catalogues and nursery trade lists. Address MEYER & KRONENBERG, Florists and Nurserymen, Washington, Ind.

WANTED.—To buy apple and pear seedlings, cions, etc., also scamora trees. Send wholesale price lists. BAKER BROTHERS, Fort Worth, Texas.

WANTED.—A gardener; a single man to go to Nebraska, that understands greenhouse and vegetable garden. Address J. D. HORTON, care Carrier 330, S. W. Postoffice, Chicago.

WANTED.—A florist and gardener, sober, honest, and competent, to take an established place on shares. Equidistant from New York and Phila. Good home market. CHARLES DAVIS, Easton, Pa.

WANTED.—Cash buyer or equal partner; just established; good trade and great chance for rapid development. Booming capital city with fine shipping facilities. Address RIVERSIDE GREENHOUSES, Lansing, Mich.

WANTED.—A young man of good habits; must be intelligent and neat, to begin work in Feb'y. Must have had a practical experience of several years in growing roses for cut flowers. No others need apply. Address, stating wages expected, E. W. BREED, Clinton, Mass.

WANTED TO RENT.—A good paying florist's business near a flourishing town, or to run a place on shares or salary. Understands the business thoroughly. Can refer to the leading growers in vicinity of New York City. Address FLORA, care I. W. Carter, Yonkers, New York.

WANTED.—A good, thorough florist acquainted with the business in all its branches; single. A German-American or German preferred. A man not afraid to work will have a permanent position—and only such need apply. HENRY EHRENFORT, 1918 to 1920 South 11th St., Omaha, Neb.

WANTED.—A thoroughly practical cut flower grower as first assistant; must be well up in roses. Permanent place to right man. References required. Address, stating age and salary required, etc. ROSE-GROWER, care Welch Bros., 165 Tremont St., Boston, Mass.

FOR SALE OR RENT.—Florist business of the late H. F. Crowell; established 15 years. First-class opening for an energetic man. For particulars, address EDITH M. CROWELL, 1512 Pacific Ave., Atlantic City, N. J.

FOR SALE OR EXCHANGE.—Four greenhouses almost new, 6,000 feet of glass, heated with hot water, located in central Illinois. Plant and cut flower trade well established. Will take land or other property in exchange. Satisfactory reasons for selling. Address CHANDLER, care Am. Florist.

FOR SALE.—Eighty acres of land excellently situated for nursery, fruit, or gardening purposes, two miles from Danville, Illinois, a city of 16,000 inhabitants, and a railroad center. Small nursery established on place and doing a good business. This is also a good speculative investment, as land

could be sold in small tracts for building purposes.
Address PETER BEYER, JR.,
503 W. North Street, Danville, Ill.

FOR SALE—In a large western city—good settled country. For the right man with some capital to connect nursery business with it. Located on Main street—street car line—7 greenhouses heated with steam; good stock of plants, 200 hotbed sash, garden tools, wagon, horses, all in good order; plenty water; 4 years more lease on 50 acres of ground; cheap rent; large house; stable. Ground for sale any time. Some good business for 6 years in flowers and early vegetables. Cause poor health. Address A. F. S. care American Florist, Chicago.

A FINE OPENING FOR A FLORIST.
I offer for sale the following property in the thriving city of Rochester: Four greenhouses 62 ft. long, one 24 ft. wide, three 14 ft. wide; heated by Hitchings & Co.'s hot water boiler; all in good running order. Also large 12-room dwelling house heated by furnace. The above is located on six building lots and can be purchased at a great bargain before April 1st, 1889. A good trade already established and can be increased by a competent man. Address C. H. POLLEY, 33 Elwood Bldg., Rochester, N. Y.

TO FLORISTS AND OTHERS. FOR RENT.

A pleasantly located house ten miles from Boston, on two lines of railroad, with three first-class greenhouses with steam power, and all modern appliances.

Choice Stock and Tools if wanted, at fair value. Rare opportunity. Apply to

WILLIAM W. LOWE, or WILLIAM R. GRAY,

Box 105, KENTON, OHIO.

New Pure White Tea Rose The "QUEEN."

This splendid new Rose originated with us two years ago, and having proved valuable, is now placed on sale. It is

A PURE WHITE SPORT FROM SOUVENIR D'UN AMI.

A vigorous, healthy grower and continuous bloomer, producing a great abundance of Buds and Flowers all through the season. Flowers are PURE WHITE, showing no trace of Pink, makes good finely formed Buds and is moderately full. Petals are thick and of good substance, opens well, is a good keeper and very sweet. We believe it will prove especially VALUABLE FOR EARLY WINTER FORCING AS WELL AS FOR OPEN GROUND PLANTING, and recommend it for extended trial with the belief that it will be found a valuable acquisition to our list of Pure White Tea Roses.

PRICE: Strong well matured plants from 2½-inch pots, \$3.50 per doz.; \$25.00 per hundred. Two year plants from 5-inch pots, \$9.00 per dozen.

ADDRESS:

THE DINGEE & CONARD CO.,

ROSE GROWERS,

WEST GROVE, PA.

Mention American Florist.

ROSES. ROSES.

We have a very fine stock of Roses in four and five inch pots suitable for forcing, consisting of BON SILENE, BRIDE, LA FRANCE, MALMAISON, MERMET, NIPHETOS, PAPA GONTIER, PERLES, SAFRANO, SUNSET, and many other choice varieties. PRICE, \$10.00 to \$12.00 per hundred.

ELLVANGER & BARRY,
MOUNT HOPE NURSERIES. ROCHESTER, N. Y.

IMPORTED DWARF BUDDED AND TREE ROSES.

Hydrangeas, Lilacs, Snowballs, Azaleas, Rhododendrons, etc., etc. ALL STRONG PLANTS from the BOSKOOP, HOLLAND, NURSERY ASSOCIATION. ORDERS FOR SPRING IMPORTATION SHOULD NOW be forwarded to

NYACK, NEW YORK.

JOHN CURWEN, Jr.,
GENERAL
GREENHOUSE STOCK AND ROSES.
Villa Nova P. O., Delaware Co. Pa.
Money Order Office: Bryn Mawr, Pa.

1,076.

The Rural New Yorker's seedling potato No. 2, will be sent to all yearly subscribers without charge. It yielded in the late celebrated "Potato Contest" at the rate of 1,076 bushels to the acre, the report being sworn to by six well-known judges. This seedling is thought to be the nearest approach to a perfect potato yet produced. The price of the Rural New Yorker is \$2.00 a year. It will be sent on a trial trip of 10 weeks for 25 cents in order to show progressive farmers, who do not now read it, that it is the best farm weekly in the world. "It has done more to promote the interests of agriculture in its experiment grounds than all the experiment stations put together." So say the editors of the New York Times, Tribune, World, Farm Journal, Inter Ocean, etc.; so say all who read it and know. It is pure, sparkling and original. Its illustrations are from nature. It commands the best writers in the world. Subscribe at once. Address the Rural New Yorker, 34 Park Row, New York.

A. C. TUCKER,

ROSE GROWER,

P. O. BOX 190.

NYACK, N. Y.

I would like to give my prices for the following varieties in 2½, 3, or 4-inch pots to any parties desiring the same, for Spring delivery:

PERLE DES JARDIN, SOUV. D'UN AMI,
LA FRANCE, NIPHETOS,
MERMET, BRIDE,
AMERICAN BEAUTY, PAPA GONTIER.

IMPORTED H. P. ROSES.

Worked low on the Manetti Stock, offer the best results to the florist, blooming freely and giving plenty of cuttings for propagating quickly. Fine plants for sale by the 100 or 1000, at low rates.

Price Lists to applicants. Address

WILLIAM H. SPOONER,
JAMAICA PLAIN, (Boston), MASS.

NOVELTIES IN ROSES.

Also the leading forcing varieties Teas, Hybrid Teas, and Hybrid Perpetuals, and novelties in Chrysanthemums. Also Tabernaemontana, Bouvardias, Carnations, and general greenhouse stock.

Trade List mailed on application.

JACOB SCHULZ,
LOUISVILLE, KY.

ROSES FOR SALE.

In first-class condition, from vigorous plants:
MERMETS, BRIDES, PERLES, GONTIERS,
BENNETTS, BON SILENES AND NIPHETOS.

In 2½-inch pots, \$5.00 per 100.
MERMETS, BRIDES and BONS, in 4-inch pots, from \$10.00 to \$12.00.

GOODING & LEITCH, Cleveland, O.

HERMOSA ROSES.

2000 strong plants from open ground, \$8.00 per 100.

J. H. CAMPBELL & SONS,
3601 Germantown Ave., Philadelphia, Pa.

February Floral Styles.

The styles have never been more taking than at present. Klunder is leading in the forcing of hardy shrubs, producing unusual varieties for this season of the year. His stock is of the choicest and the plants are beautifully grown. His forsythia is selling for one dollar a spray; he is also selling small bunches of beautiful apple blossoms for the same price, and the lovely *Desmodium penduliflorum* which has not been produced here before this season, may now be bought at his establishment. The novel forcing of these hardy shrubs has been accomplished by Mr. Bird, and has proven a very successful undertaking. The primroses brought in from Mr. Pitcher's and shown in Klunder's window in a bridal bouquet are most beautifully arranged. The bouquet is made loose and the monogram of both parties stamped on a delicately tinted pink sash with which it is tied; the effect is unique and striking, as it is exhibited in the window on a pillow of white velvet, surrounded by choice varieties of ferns. The cyclamen plants also from Mr. Pitcher's shown in deep pink, pale pink and white, are cultivated to a most unusual extent, each in bloom with from three to five flowers and two to three buds; their extra size and delicacy of marking almost surpasses belief.

At the late Astor and Vanderbilt balls the decorations were exceedingly choice; Japanese primroses which are now being cultivated to so marked a degree were abundant and prominent. One room in the Vanderbilt mansion was entirely decorated with Magna Charta roses; much attention has been given of late to the cultivation of these roses. A second room was embellished with apple blossoms, a third with orange trees and still another with a combination of blue Roman hyacinths and yellow jonquils; the excessive beauty of this latter arrangement has been rarely seen, as neither time, pains nor expense has been spared in the cultivation of these flowers. At Mrs. Webb's ball, which happened about the same time, the favors used at the German were crumb trays, upon which Mermet roses, intermingled with white and green ivy were daintily placed—the trays being trimmed with pink ribbon.

Alexander McConnell has opened a new store on Fifth avenue opposite the Church of the Divine Paternity, his business having increased to such an extent that this was rendered necessary in order to be within easy distance of his numerous and wealthy customers. He has in charge the decoration of the Old Guard Ball, which is elite and fashionable, no expense being spared in making it the affair of the season. The back of the stage of the Metropolitan Opera House is to be transformed into a natural forest scene, with baskets of flowers and ele-

gantly bunched bouquets placed at intermediate distances.

The Souvenir de la Malmaison rose is occasionally seen, it is now at its best, and is always valued by its numerous admirers. The phenomenal French fish basket which has never been superseded, is still the leader in expensive flower baskets. It is always the choice of those who desire anything in gorgeous flower belongings.

FANNIE A. BENSON.

New York.

Boston.

Roses are scarce. The long continued spell of warm weather extending over the first three weeks of January forced into bloom everything in the shape of a bud and with the advent of more seasonable weather we find that there is but little left to come out.

Prices are not high, however, considering the circumstances. A few Jacqs and some good hybrids are now coming in, but in limited quantities as yet. Carnations are plenty, and there is also an abundant supply of violets. "Bulbous" flowers are also in full supply, including freesia which has now become as staple a supply as are tulips or Roman hyacinths. The single yellow narcissus is in good demand; also mignonette, forget-me-not and cyclamens.

Primula obconica is quite fashionable for corsage bunches.

Joseph Tailby, the originator of the Grace Wilder carnation, has a number of sports from that popular variety. One of these, a white one, is particularly good as the blooms come singly on long stems.

The sensation of the day is the recent assignment of E. M. Wood & Co., of the Waban Conservatories at Natick. This establishment is widely known for its magnificent houses, where very fine roses have been grown, but at frightful expense. The failure is a heavy one and will be felt severely by some of the employes of the establishment, whose salaries are in arrears.

Some of the Boston florists are getting dangerous. A pair of shears was the weapon adopted by one belligerent individual to clear his store of unwelcome visitors. He is minus the shears now, as one of the party more courageous than the rest tackled him and now holds the shears as contraband of war.

The two delegates from Boston to the executive committee meeting at Buffalo, returned with an overpowering appreciation of the hearty hospitality and kindness received there. The fame of the Buffalo brethren will spread all over the country and a great attendance may be counted upon for the August meeting. Buffalo is not so large a city in population as those where previous conventions have been held, but the hearts of her florists are evidently as big as the biggest

W. J. S.

WASHINGTON, D. C.—Trade in cut flowers and plants exceptionally dull for the season, owing to the depressed condition of society people immediately preceding the incoming of a new administration. Another and additional cause may be the action of certain so-called club leaders in taboos bouquets at balls. The latter to say the least is very ungenerous to ladies, with whom flowers are an important factor to produce fine effects and will always serve as the most pleasing giving mementos of such occasions. A reaction is sure to follow and florists may depend upon a "boom" before spring sets in, invariably the effect of such unnatural and illadvised temporary suppression of "inborn delight." The florists in the Central Market have carried their point and they will be allowed to keep their stands on the ground floor as heretofore. The contract for the floral decorations of the inaugural ball has been awarded to Neal, the Bowery florist of New York, for \$2,700, a mere pittance of what should have been expended for this purpose. A third rate job will of course result as is evidenced by the large order already given by the contractor to a certain manufacturer of tissue paper flowers in this city. A sad commentary on the judgment and taste of the committee having this important educational and æsthetic feature of the inauguration festivities in hand.

Postage on Cut Flowers.

Our postmaster has received a letter of instructions from Third Assistant Postmaster General H. R. Harris which says:

"The law reducing the rate of postage on seeds, cuttings, etc. does not apply to cut flowers. They are still subject to the fourth class rate of postage."

I suppose we shall have to organize a rebellion, and the above formal ruling of the department seems a sufficient *casus belli*.

L. WIGHT.

Framingham, Mass.

CHICAGO.—The Florist Club's ball occurs February 12. The floral decorations will be the principal feature of the affair, for which large quantities of flowers will be required. All growers for this market are expected to contribute liberally. Flowers so contributed should be addressed to the Chicago Florist Club, care of any of the commission houses, to reach the city the morning of Monday, Feb. 11.

KALAMAZOO, MICH.—Holiday trade larger than last year, quality of flowers better, prices about the same, call being almost entirely for loose flowers. W. Kirkham has built a house for roses and bedding plants. Pres. De Graw is the best white carnation here this winter. Trade brisk at present.

SEEDS.

My Annual PRICED CATALOGUE is now ready and mailed free to all applicants. It contains all the leading and most popular sorts of

VEGETABLE, FARM, AND FLOWER SEEDS,

Besides all the desirable novelties of last season, and nearly everything else in my line of business.

ALFRED BRIDGEMAN,

37 East 19th Street, New York City.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

Second Edition.

GEO. A. SOLLY & SON'S BOOK OF PLANS

For

Carpet and Ornamental Flower Beds.

With many it is a difficult task to lay out a carpet bed, or fancy design on the lawn, and perhaps more difficult to choose the proper plants to harmonize, so as to give the best effects. The object of these drawings is to assist gardeners and amateurs, and to enable them to choose the proper plants for their work. It is expected that this book will supply a long felt want, as it is the first and only publication entirely devoted to Fancy Flower Bed Designs.

This, our SECOND EDITION, consists of over 100 designs, finely engraved, on good paper, neatly bound, sent pre-paid to any address on receipt of Price, \$3. GEO. A. SOLLY & SON, SPRINGFIELD, MASS

ELLWANGER & BARRY, ROCHESTER, NEW YORK.

Come, Fellow Farmers!

It is the good things and the new things you want. Here is a Catalogue full of them! Do you want tested seed, raised from stock selected with extra care, grown from the best strains, got from the originators? I aim to have mine just such. Do you want new varieties that are really good, and not merely novelties? I aim to have mine such. Do you want seed that the dealer himself has faith enough in to warrant? I warrant mine, as see Catalogue. Do you want an exceptionally large collection to select from? Mine is such. Do you want them directly from the grower? I grow a large portion of mine—few seedsmen grow any! My Vegetable and Flower Seed Catalogue for 1889 FREE to everybody. JAMES J. H. GREGORY, Marblehead, Mass.

WE OFFER TO THE TRADE PLUM SEEDLINGS

Faxon's Flower Seed Specialties.

ROYAL MIXED ASTER.—This mixture includes three varieties: Truffaut's Peony-Flowered Perfection, Victoria, and Pompon, in twenty-five distinct colors. For private gardens this seed is unsurpassed, giving a great variety for a little money. My Asters received all the first prizes the Massachusetts Horticultural Society offered for this flower last season.

Per large packet, 25 cents.

SUPERB PRIZE PANSY.

Kindly note that these are not novelties, but standard flowers grown to perfection.

SUPERB PRIZE PANSY.—The flowers of this variety (see illustration) are of most rich and brilliant shades, as well as large and heavy. Plant this strain and have good, heavy, velvety pansies. All colors.

Per packet, 50 cents.

FAXON'S BOSTON MIXTURE SWEET-PEAS.—This mixture contains all the best colors, both new and old. It is not necessary for me to say that the Sweet-Pea is the most popular annual in cultivation: you know it!

Per large packet, 5 cents.

CHAMPION MIXED NASTURTIUMS.—These mixtures contain all the desirable colors in cultivation. I offer two mixtures, — Tall or Running, and Dwarf.

One packet of each sort, 10 cents.

ESSAYS.—Having received many applications for the essays I have delivered before the Massachusetts Horticultural Society, I offer them as follows:

"ANNUALS AND THEIR CULTIVATION." *Price 10 cents.*

"GARDEN VEGETABLES." *Price 10 cents.*

M. B. Faxon
Boston Mass.

INTRODUCTION OFFER.—The above superb collection of Flower Seeds amounts to 90 cents; the Essays to 20 cents; a total of \$1.10. To introduce my seeds to thousands of new customers, I will send, prepaid by mail, both Seeds and Essays, together with my Seed Catalogue, for 50 cents; provided, that those ordering will state where this advertisement was seen. Send postal note or 5 ten-cent pieces (securely pasted to your letter). This advertisement will appear but once; take advantage of it now.

THE HELP FOR CUT FLOWER WORKERS AND FLORISTS
 FLORAL DESIGNS.

PUBLISHED BY A. BLANC AND J. HORACE MCFARLAND,

Has been kindly received, although out but a few weeks. It hits a weak spot, and helps those who sell floral work in many ways. 162 royal octavo pages, including 50 plates of designs, printed in soft tints and rich tones, and a complete treatise on floral work. Send for it, or send for a prospectus if you want to know more about it first. The extracts below show how it has impressed subscribers:

"Cheap at \$5 per copy; to florists in small towns must be very valuable," H. H. HUNTRESS, N. H.
 "A book that no local florist ought to be without. * * * Will save me time in selling set pieces." J. FULLER, Mass.

"Well pleased; * * * admire plain English hints upon design work." HUNTS, Pa.
 "I find it most satisfactory to show my customers to select from. It is the proper thing in the proper place." J. G. EISELE, Phila.

"Highly creditable to the floral art." J. BREITMEYER & SONS, Detroit.
 "For the florist doing a retail cut flower business is almost indispensable, since it illustrates that which cannot well be described. It will help to improve the taste, and give the average florist a source for ideas." E. A. SEIDEWITZ, Maryland.

PRICE, substantially bound in cloth, \$3.50, on receipt of which it will be mailed promptly by

"SNOWFLAKE" STOCK.

In habit this stock closely resembles the Dwarf Pyramidal; it produces a vigorous main spike of uncommonly large and very double snow white flowers and, when fully developed, numerous flowering side shoots. Its glossy dark green foliage renders the dazzling whiteness of the flowers more conspicuous. It is one of the earliest of the Dwarf Ten Week Stocks, and is admirably adapted for forcing. Seed produces about 60 per cent of dbl flowers. Trade pkt. 50c.

Verbenas New Mammoth, grown from original stock. Trade pkt. 50c. \$4.00

Scale on English Ivy.

I would like to ask through the AM. FLORIST what is best to do with scale on ivy leaves? I have tried syringing with whale oil soap, kerosene, tobacco water, etc., with no result. Is there anything that will kill these creatures except clearing them off by brush or sponge? If so I would be thankful for information.

"ACME WATER HEATERS."

The most efficient and economical apparatus on the market for heating by Hot Water. Florists will do well to study up the system of Hot Water Heating, and thus enable them to select their Boilers by practical knowledge. We claim the largest heating surface exposed to the fire and the greatest results from the least fuel. The Acme will heat more 4-inch pipe than any other Boiler made of the same size grate. We offer the means to economize in your most expensive department.

"STANDARD" POTS

Ours is the only firm that has, up to this date, February 1st, 1889, made pots which conform IN EVERY PARTICULAR to the requirements of the Committee of S. A. F.

THE

Whilldin Pottery Co.

NEW YORK, December 17th, 1888.

THE WHILLDIN POTTERY CO.,
713 & 715 Wharton St., Philadelphia, Pa.

Gentlemen:—Please send me for the present,
Forty thousand (40,000) 2-inch pots,
Ten thousand (10,000) 3 inch pots.
I am in no particular hurry but would like them by the middle of January, the 3-inch a little sooner, if you could. Again let me tell you that we are delighted with the large pots. We have just finished potting 15,000 Roses in 5 and 6-inch pots, and from your lot hardly a pot was broken in the process of potting.

Very truly yours,

PETER HENDERSON.

For price list of the "STANDARD" POTS, address

THE WHILLDIN POTTERY COMPANY,
No. 713 & 715 Wharton St., PHILADELPHIA, PA.

SYRACUSE POTTERY CO.

Will not "get left" in the race for the New "Standard" Rim Pots. We have "hustled" and got the latest improved patent machinery and new revolving power presses to make them at once at an immense outlay of ready cash. Don't be humbugged any longer by the lofty claims and high prices of potters who have made Rim Pots. We have the precise and exact New "Standard" Pots as adopted by the S. A. F. committee, including the raised bottom and inside slope for drainage. We will mail sample for 6 cents postage. We have no traveling men, no high expenses of salaries and no bad debts. We sell on mail orders only and for cash or good notes, and we are not afraid to publish our net prices to the world. We treat all alike. We deliver free on board and no charge for crates or barrels. Our frt. rates are the lowest and the breakage of the rim pots is little or nothing. Now see our prices per 1,000 of any sizes packed to order.

PRICES OF "STANDARD" POTS,

1 1/4-in., \$2.80; 2-in., \$3.20; 2 1/4-in., \$3.60; 2 1/2-in., \$4.00; 3-in., \$5.00; 3 1/2-in., \$7.00; 4-in., \$8.50; 5-in., \$14.00; 6-in., \$24.00.

Size.	Price of 1000.	Crate No.	Price No. of Crates.
2 1/4-inch	\$3.60	1875	\$3.75
2 1/2 "	4.50	1150	5.20
3 1/4 "	6.30	875	5.50
4 "	7.91	600	4.75
4 1/4 "	11.10	300	4.00
5 "	14.00	320	4.50
6 "	22.00	160	3.50
No. 1 Rose	4.33	1500	6.50
No. 2 "	4.00	1600	6.40
No. 3 "	3.70	1900	7.00
Per 100.			
7-inch	\$3.75	108	4.00
8-inch	6.67	60	4.00

The first five sizes, including 3-inch, we have all ready for orders, but the machines for 3 1/2 to 6 inch are not yet in. Look for our "ad." in next issue.

Now our stock of smooth pots must be sacrificed at once, and we offer immense bargains to all buyers. All sizes are inside measure, and we quote here the prices by 1000 and by the crate. Order quick from these and write for our new circular and frt. rates.

Reduce your Coal Bills THE FURMAN STEAM HEATER

ESPECIALLY ADAPTED FOR
WARMING GREENHOUSES.

Gives a most uniform heat night and day. Can be run with less attention, and a SAVING of fully 20 to 25 Per Cent. in Fuel over any other method. Burns HARD or SOFT COAL. Endorsed by leading florists. Send for full Illustrated Catalogue, showing how to pipe and heat a house by steam.

Address HERENDEN MANUFACTURING CO., GENEVA, N. Y.

HALES' MOLE TRAP

For destroying ground moles in lawns, parks, gardens and cemeteries. The only PERFECT mole trap in existence. Guaranteed to catch moles where all other traps fail. Sold by seedsmen, Agricultural Implement and Hardware dealers, or sent by express on receipt of \$2.00 by H. W. HALES, RIDGEWOOD N. J.

Ives' Putty Machine.

Patented Jan. 8, 1887.

The best device ever invented for laying putty. With this you can make old leaky sash perfectly tight without removing the glass. It will do the work of five men in bedding glass.

Sent by Express on receipt of price, \$3.00.

J. H. IVES, DANBURY, CONN.

TWENTY-EIGHT PAGES this issue.

OF OUR NEXT ISSUE we shall publish 8,000 copies, sending sample copies to all in the trade who are not already on our subscription list. Thus a copy of next issue will be placed in the hands of every florist in the United States and Canada and some 300 leading houses in Europe. A feature of this issue will be a supplement containing the spring price lists of many in the trade, which we believe will be a great convenience to both seller and buyer—to the first in circulating his price list to the *whole trade at much less cost* than he could print and mail his list to half the number himself, and to the latter in having the lists *all bound together* in uniform size and in a manner *very convenient for reference*. If you desire your price list to appear in this supplement send order and copy at once.

New York Notes and Comments.

"Souvenir de S. A. Prince" (terrible monthful to get off in a hurry), is the name given to the white sport from Souv. d'un Ami offered by an English firm. A sport from the same variety, originating in this country, has been sent out under another name, "The Queen," and it seems as if the American flower had got here first, too. If they are both white sports from the same rose the only difference 'twixt tweedledum and tweedledee must be in the name—a matter for the committee on nomenclature to investigate. It may lead to a good deal of confusion. The English flower seems a little more high priced at present, but that will not be a permanent difference.

Easter stuff is the chief thing out at Bay Ridge, judging from Messrs. Dean's Kellar's and Weir & Sons'.

At Jas. Dean's the houses are full of genista, hydrangeas, lilies, etc., which will not require such rapid forcing as last year, Easter being so late. The genista, which is greatly increasing in favor, is struck from cuttings and grown cool. The European practice is to keep it well stopped back, so that it makes neat compact little bushes, and this is certainly the best plan when the plants are to be retailed in pots. They are as round and symmetrical as imported azaleas and covered with flowers. For general florists' use they are allowed to throw up their long shoots; a four year old plant left to its natural form makes a very large bush, while a plant of the same age stopped back each year may be barely eighteen inches high. A good many of these plants are imported, though they do not always travel well. Many of the big plants at Mr. Dean's are forced for some years, being hired each Easter to the florists for church decoration. Plenty of hydrangeas here, Thos. Hogg and Otaksa; this is one of the most useful flowers for decorating, because it stands well and easily revives when it does show signs of wear and tear.

Azaleas—Mr. Dean will have plenty of these with the rest of his Easter stuff. It is worth noticing that if a newly imported azalea is dry at the roots when first potted it never really recovers afterwards. The balls are usually as hard as bricks when they get here, being a mixture of leaf mold and sand; the most practical plan is to soak them in a tub of water for about 24 hours before potting, and even then the balls are often quite dry at the heart.

Lilium Harrisii is to be seen in profusion at Bay Ridge, but there is little long-florum; in fact, the latter promises to be very much in the minority. Peter Henderson says that Harrisii gives much larger returns than any other lily, according to his experience; of course it has the advantage of being in so early. Pity it

has not a little more substance; it could then be handled better. Roses are grown but little at this place, the soil being a little too light, though some good flowers were seen.

At J. M. Kellar's like the preceding place, a good deal is done with Easter stuff. Mr. Kellar bought a lot of the foreign-grown genista when in Europe last year, in addition to his own stock. Among decorating plants he has a batch of very good Pandanus utilis and a lot of nice palms. Arecas and other similar palms are to be seen three or four in a pot, a large one in the center and smaller ones around it, giving a bushy effect very desirable. A bed of heliotrope here was planted in the upper bed of a rose house, high up near the glass, a light soil being used. The result was remarkably fine. Eucharis was planted out in a bed here, a very satisfactory method when possible. A bed of Mrs. John Laing seemed very satisfactory; color and perfume all one could wish. Mr. Wadley says they have been much pleased with this rose since the holidays; they are growing it in pots and find it very prolific.

At Weir & Sons one of the first things noted was a house containing about 1,500 callas, a fine sight, as most of them were in bloom. Another house contained about 2,000 Lilium Harrisii. Some rhododendrons here were preparing for Easter; these plants make handsome decorations, though they hardly pay as cut flowers, because the plant must be slashed up so much to provide long stems. By the way, Mr. Weir says that he did a good deal towards subduing the smilax caterpillar by the application of Lyons' insect powder, and he found the same insecticide fatal to the tiny flea-like creature that destroys the leaves of the Paris daisy. These daisies seem rather liable to disease in many places now; there seems no reason for it, and the only remedy known is to destroy the plants and get a new stock.

The decorations arranged by Siel recht & Wadley for the recent Zedlitz-Roosevelt wedding are generally considered the handsomest of the season, and it is worth noting that there were scarcely any cut flowers used, except in the bouquets. At the church a row of lilies in pots were put along the chancel rails, with banks of palms down the sides. At the Hotel Bristol the reception rooms were entirely decorated in yellow, chiefly genista and acacia. The bride and groom stood under an archway formed by two big specimen palms, with a bank of palms, genista and other plants filling out the sides and forming a semi-circle. The mirrors had curtains of smilax, looped back with acacia, and the same decorations prevailed throughout the rooms. The mantels were banked with plants, adiantum, genista, small palms,

etc. Most of the plants used were grand specimens. No ribbon was used except on the high square basket which stood on the supper table; this had a sash of yellow and pink to match the flowers filling it, jonquils and Mrs. John Laing roses. The prevailing tints of yellow and pink were chosen to harmonize with the Uhlan uniform worn by the groom.

The floral artist of the New York *World* has been giving us a lot of information again, this time relative to the enterprise of growing flowers in Florida for the New York market—"There's millions in it,"—according to the *World*. However, the prospect does not seem to scare our growers very much.

EMILY LOUISE TAPLIN.

Business Methods.

The nature of the complaints frequently made to us by subscribers as to the manner in which they have been treated by others in the trade with whom they have had dealings strongly emphasizes the fact that florists in general are very lax in their business methods. The state of affairs most frequently developed indicates an entire absence of method and it is really remarkable that disputes and misunderstandings do not arise more frequently though they are certainly common enough.

When a member of the craft is approached on the subject of business methods he almost invariably states with some impatience that he hasn't the time nor facilities to keep such a record of his business as do other business men, but it isn't long before he will be wasting much time and considerable money in a law suit, which could have been avoided if a proper record had been kept, or else pocket a loss which would have covered the cost of keeping a good record for several years.

One subscriber relates that he ordered baskets to the value of \$45 from a supply house and when the goods were received there was included a lot of stuff which he did not order and the invoice called for \$75. He admits that he made no move to return the goods, but allowed the matter to drag along, ignoring the statements sent him and drafts made on him until six months had elapsed when he was sued for the amount, neglected to defend the suit, judgment was rendered against him and he had to pay the bill and costs. Had any one but the gentleman himself told us this story we should have refused to believe it, for he is a man of intelligence in most things, and we are surprised that he didn't keep to himself the fact that he was such a fool as to permit such a game to be played on him.

How much loss he would have saved had he on receipt of the goods at once repacked those which he did not order and shipped them back with a bill for packing and cartage on same, deducting this from the \$45 actually due and remitting the balance. That would undoubtedly have ended the matter at once.

We have had several similar, though less aggravated cases brought to our attention which would indicate that there are quite a number in the trade who are at a loss how to proceed when goods are shipped them which they did not order. There is only one thing to do and that is to refuse to receive them, or if included with other stuff which you did order, return at once any which you did not order. If there be any expense incidental to such return, charge it to the shippers. But first be sure that you did not order them. Keep an accurate copy

of your order which shall be conclusive proof in case of dispute. Don't forget that one man's assertion is just as good as another's, and make no assertions that you are not prepared to back up by conclusive proof.

There is a class of men who are very particular to see that all charges are made on their books, but who fail to keep any record whatever of goods purchased, and when a statement is presented never give it any attention. They permit accounts to drag along in this manner, and then when they are pushed for payment dispute the bill because they don't recollect having received all of the goods. The time for such disputes is when the bill is first presented, not months afterwards. When a bill and goods are received check it up at once; if correct give proper credit without delay, if not correct advise the sender of the fact then and there. Adjustment is easy while all the details are fresh in mind, but the seller can not be blamed for looking with suspicion upon complaints made several months afterwards.

A man who does not properly attend to his correspondence can never make a success of his business, especially if he aims to do a shipping trade. The number of complaints we have received at times against reliable firms on this score is really remarkable. And permit us to remark parenthetically that these complaints very rarely refer to firms who do the largest business, but almost entirely to smaller houses which are endeavoring to build themselves up, and who can least afford to give cause for adverse criticism in their dealings. The houses which have reached a prominent position in the trade have done so by careful and considerate attention to their correspondence as much as anything else, and in the maintenance of their position the same policy is an important factor. It is more than probable that the reason the business of these smaller houses does not grow more rapidly is simply lack of proper attention to their correspondence.

Plants in 2½-inch Pots.

The most frequent cause of disputes in our business is as to quality of plants sent, and with the present very crude manner of describing stock they are very difficult of adjustment. It is remarkable that some better system than the present one has not yet been devised.

A dozen different concerns will offer "Mermet roses in 2½ inch pots, first class condition," and an order sent to each of them will be filled with plants varying as widely in quality as can possibly be imagined. The description is so indefinite that it is practically valueless. We have seen plants sold from 2½-inch pots that should have been offered as rooted cuttings, and others which were superior to some from 4 inch pots.

One man offers his plants from 2½-inch pots at \$5 a hundred, while another one asks \$8. The buyer is puzzled. If he divides his order between the two he may get nearly the same quality from each, but the chances are vastly in favor of his getting some nearly worthless rooted cuttings from one and plants from the other that are really worth four or five times those received from the first one. Again the situation may be reversed; he may get good plants at the lower price and miserable stuff at the higher price. In any event he doesn't know what he will get until they are delivered, and whatever they are he can't well complain for that the plants all came from 2½-inch pots may be quite true.

Again because he received first class plants from Mr. A one time it is no certain sign that he will be as well treated next time for the best of A's stock may have been all picked out, or he may not have had as good success in growing this season as last. In the meantime A's description of his stock is the same—"Mermet roses in 2½-inch pots, first class condition." Isn't this a very ridiculous state of affairs?

We are sadly in need of a standard classification for the merchandise we deal in, based upon the same principle as those now in use in other trades. The determination of the quality of grains is fully as difficult as determining the quality of plants and bulbs. We believe that a reliable classification could in the case of plants be based upon the number of healthy leaves the plant possessed, it being an accepted fact that the number of roots and vigor of the plant must be in proportion to the quantity of healthy foliage. Bulb classification could we think be quite accurately based upon weight; solidity could be covered by taking both weight and size into consideration. Classification of a No. 1 Roman hyacinth might be as follows: Weight not less than — ounces, size not more than — inches in circumference. That for a No. 1 rose plant: Number of perfectly healthy leaves —, plant in not less than — inch pot.

A little thought and investigation would undoubtedly develop a classification which would be a tolerably accurate description of the plant or bulb, certainly far more accurate than the present exceedingly vague terms employed. Such a classification, universally recognized by the trade would be a great blessing to both buyer and seller.

Catalogue Illustrations.

The action of the executive committee of the S. A. F. at its recent meeting in regard to catalogue illustrations is unquestionably a step in the right direction. It can not be expected that the society can at once crush out the practice of using exaggerated illustrations, but that it can by wise measures lessen their use is not to be questioned. It has been stated that "the society has no right to interfere with the business of individuals, and that it can not force any one to use accurate engravings." Very true, but it can give honest men a chance to prove themselves so, and it can place matters in such a light that the dishonest ones shall be unerringly pointed out, and when a swindler is published to the world his ability to deceive is gone, or at least greatly lessened.

We use the word swindler advisedly. A man who publishes an illustration of a plant or flower which represents that plant or flower several times better than it really is must be designated by the same name as he who sells goods from an extra good sample and then fills his orders with fourth class stock. We can not object to any one representing the best actual development that can be made of the plant or flower illustrated, but when that boundary is overstepped he who does it is dishonest and a swindler, for he is attempting to obtain money under false pretenses.

The remedy proposed is to have a standing committee of the S. A. F. appointed to whom may be submitted by any one so desiring, proofs of illustrations with actual specimens of the subjects they represent. If in the judgment

CONSERVATORY AT FOREST HILL CEMETERY, UTICA, N. Y.

of the committee the illustration is accurate, they shall issue a certificate to that effect and the words "True to Nature" or "Certified correct," to be followed by the letters "S. A. F.," may be used upon the illustration itself. Buyers from catalogues will soon learn to know what this signifies and increased confidence in illustrations so certified will at once follow.

In justice to the honest catalogue men some means should be taken to remedy the present state of affairs. It is unjust to them that swindlers should be permitted to bring obloquy upon the whole profession and lower it in the eyes of the public. We believe that the plan suggested is the one most practicable as a measure to separate the black sheep from the white. No honest man can possibly object to the method proposed.

Condemnation of trade abuses are well enough in their way, but decisive action only is what accomplishes results, and such action the society can easily take in this matter at its next convention.

Catalogue Spelling.

After all the talk we have had in regard to the correct spelling of the name of the carnation *Hinze's White* we note that several of the spring catalogues have it incorrectly. Even our very particular friend Mr. Hill has it spelled "*Hinzey's White*," Mr. Henderson has it "*Hintze's White*," and other catalogues have it spelled in a variety of ways as of yore. We must give Messrs. Hunt and Dreer credit for having the name spelled correctly.

Synonyms.

If you know of any plant which is parading around your locality under more than one name please report the same to us and we will see that the matter is properly brought before the S. A. F. committee on nomenclature. It will be next to impossible for the committee to thoroughly cover the ground without assistance of this kind. As every one is interested in having present lists cor-

rected aim to do your share. Don't put it off. Do it now while you have the matter in mind.

Packing Plants.

Shippers of plants should not forget that it is the condition of stock upon arrival at destination that their reputations depend upon. No matter how excellent the plants may be when shipped, if they are all smashed to pieces when received by the consignee they are poor stock and probably almost valueless to him. It is the appearance plants present on arrival that the buyer judges you by, therefore you can not expend too much care and attention on packing for it is fully as important as the proper growing of the plants.

Standard Pots.

This is a subject which should receive at once the careful consideration of every one who has the interests of the trade at heart. The necessity for a standard, in size at least, has been so long recognized that it needs no discussion here, and now that the S. A. F. has adopted one it only remains for us to rise up in a body and declare that we will buy only "standards" in future. It will be a long time at best before we can dispose of the stock now on hand and it will be greatly to our interest to hasten this reform in every possible way.

I don't know what measures have been taken by potters in the east towards supplying these pots, but our western potters seem to be in a state of blissful ignorance on the subject. One very prominent concern in answer to our inquiry, "Do you make standard pots?" say, "What is the standard? we have never heard of it," and when explained said they made a good pot, but should not change their pattern because the S. A. F. chose to adopt one. Another said "We have made no standard pots yet and yours is only the second call we have had for them," and proceeded to tell us that they were heavier and tipped over easier

than did his make. Another said that they did not make the standard and informed us that Chicago and Milwaukee florists did not intend to use them as they were not deep enough, etc.

It is out of the question for us to pay freight on pots from the east and we must combine to bring these gentlemen over to our view of the matter. Let every one who thinks the standard pot will do him or the trade generally, good—drop a postal card to the AMERICAN FLORIST saying so and the pottery men will instantly respond in the way we desire. *Write it now.* IOWA.

[We heartily endorse the sentiments expressed by our correspondent. Now that a satisfactory standard has been adopted the florist who will not assist in its immediate universal use by insisting on buying only standard pots is certainly not alive to his own best interests. As regards the slow-going western potters they can either begin making standard pots or lose a large share of their business. Western florists need have no fear that they will have difficulty in securing standard pots at the same cost as other styles of pots. Nothing would suit the enterprising eastern potters better than to have their western competitors persist in a refusal to supply the demand, for it would be a simple matter for them to establish distributing agencies at the large western cities to which they could ship in car lots which would bring the freight down to an inconsiderable item, and by supplying what the trade wanted, easily command the bulk of the western trade. Two of the potters who advertise in this paper are making the standard pot, one making all sizes, the other several of the smaller sizes and is making changes in machinery as rapidly as possible to supply all the sizes. Florists should endeavor to buy all their pots of these potters who have conformed to the wishes of the trade (see their ads. on next to the last page). A sudden diminution of their trade will bring the other potters to their senses quicker than anything else.—ED.]

Mme. Andre Duron.

I noticed in looking over former numbers of the FLORIST that there seems to be some misunderstanding in regard to the hybrid tea rose Mme. Andre Duron, sent out by Bonnaire in December, 1887, (at least that is the date at which we received them). Thinking that perhaps I can throw some light on the subject, I will state what I know about this variety.

In the first place it is a distinct variety different from any in our collection. It was fully described by Ex-President Hill in No. 79, page 154, of AM. FLORIST. This description is in general correct after making the usual allowance for the use of the words "very large" in describing the flowers. That is a form used by nearly all the raisers of new roses, but then some persons see every new rose "large" or "very large," probably their eyes magnify; the disease seems to be very common among the French rose growers and has spread badly over this country.

The eternal fitness of things in the description of flowers in our modern catalogues has become a lost art; for example, if we describe a rose two or two and a half inches in diameter as large, or very large, how should one four or four and a half inches in diameter be described? or we say a rose containing twenty or twenty-five petals is "double" or "very double" what words in our language have we left to describe a rose containing from 100 to 120 petals?

But I am getting off the subject I started to write about, namely, how came the hybrid tea rose Mme. Andre Duron to be compared with the old Bourbon rose Appoline. I will try to explain. At the same time Mme. Andre Duron was sent out there was also issued a new Bourbon rose called Mlle. Marie Drivon; this rose I think was sent out by the widow of Joseph Schwartz (Lyons, France). The rose resembles the old Bourbon Appoline very closely in habit of growth and bloom, in fact the resemblance is as close as that between Queen's Scarlet and Agrippina.

It is a puzzle to me how our English friends came to compare Mme. Andre Duron with the rose Sir Joseph Paxton, an old Bourbon (sent out in 1852 by L'affay), which is a deep red in color, while the old Bourbon rose Appoline (sent out in 1848 by V. Verdier) is a deep pink and a different formed flower, in fact one of our most distinct varieties. For description of above roses see H. B. Ellwanger's book, "The Rose," pages 205 and 281, from which the above dates have been taken.

We have grown the above named varieties the past 23 years on our grounds and find Mr. Ellwanger's description correct. If agreeable I will mail a small plant to the AM. FLORIST of Mme. Andre Duron, Appoline and Mlle. Marie Drivon and let any interested florist grow and compare the three varieties and I am sure he will soon see the difference between Mme. Andre Duron and the others.

ANTOINE WINTZER.

West Grove, Pa.

Three New French Roses.

I send descriptions of three new French roses sent out in December, 1888. The descriptions are of the plants as blooming in our houses.

New Tea Rose Mme. Amelie Vloeberghs: Habit of plant robust, shoots covered with straight thorns, flowers medium, color lemon yellow shaded with light rose, quite double and a free bloomer.

New Polyantha Rose Flora: Plant a neat moderate grower, foliage light green, flowers small, color white with pale yellow center, a promising variety.

New Polyantha Rose Blanche Rebatel: Habit of plant dwarf, foliage a rich deep green, often producing seven leaflets, flowers small, growing in clusters of 20 to 25 or more, color a pleasing violet red, delightfully fragrant; the plant is a very free bloomer and is one of the most promising and distinct of this family.

West Grove, Pa. ANTOINE WINTZER.

Wood Lice in Rose Beds.

On my rose beds in the greenhouse at night wood lice are swarming by thousands. So far I have not noticed any damage done, are they likely to do any? What will kill them or drive them away?

E. D.

Propagating Ficus Elastica.

Do you grow any rubber plants in your place, or are you among those who think they would not sell readily and you would have them on your hands for several years? Then let me assure you that you will sell them if you can offer a few good plants, or even a large quantity may be disposed of by advertising at a reasonable price. Or perhaps you think you have no proper conveniences for their propagation, or have even tried to strike a few cuttings and failed to root them; you think perhaps that your bench had not enough bottom heat for that class of plants.

To all those I would say that they can be grown very easily in most any greenhouse or frame to perfection, the cuttings may be rooted without any bottom heat and with less bother than in a regular propagating house and I am inclined to think good plants will find ready sale quick enough in any place, for this is one of the very best house plants in existence, as it will stand rough usage and neglect to an astonishing degree. It is a favorite with nearly everybody who is in the habit of keeping house plants and deserves to be, for the noble erect appearance and the vigorous habit of the tree. Whether large or small a rubber tree will find admirers. I do not claim this to be a new way of striking the cuttings, but I am sure it is but little known among plantmen.

All we want is a house where you can grow successfully a lot of ferns, palms, or anything of that description, the house being kept moist, close and shaded. About July 1 cut off the top cuttings of your rubber stock plants six to eight inches long, insert them in flats filled with sand, pressing very firm around the cutting and place them in that house between the palms or other plants. About four or five weeks later, when the eyes on the stock plants have swelled out, cut all available wood as far as there are any leaves and cut them to single eyes. We certainly could have cut them before, at the same time we cut the top cuttings, but, as the majority of eyes were dormant then, it would take almost a year for some of them to start out and it is safer

and quicker to force them out on the old plant than to take chances. When all are cut and put in flats same as the tops, place them in the house under the shade of the other plants and leave them there until middle or end of September when all will be rooted. They require no care, not even watering, for in such a house as I have described frequent syringing is necessary and the sand will be kept constantly moist enough by that process alone. I should have said also that three or four year old wood and too thick to be cut with a knife, may also be used by slicing off a chip, with leaf attached, about an inch or two long and about one quarter inch thick, it will root as freely as any cutting and make a good plant.

Pot your plants now singly in 3-inch pots and keep them over winter in a temperature of 50 or 60 degrees; when spring comes give them a liberal repotting, a close and warm atmosphere with plenty of moisture and by fall you will have a lot of good healthy stock in 6-inch pots, from fifteen to twenty inches high, which will most surely find purchasers during the fall and following winter.

Such a grand old plant should be found in every establishment, no matter how small, and wherever plants of any description are offered for sale *Ficus elastica* certainly ought to be one of the first in the list. JOHN B. KELLER.

Rochester, N. Y.

Ipomœa Pandurata.

(Wild Potato Vine, or Man-of-the-Earth.)

This is a tuberous rooted native species of very great merit. It is now being pushed by a southern firm who say about it: "We do not know that the beautiful Florida species here offered has ever been introduced to northern flower cultivators," etc. This is true so far as I know, for Woolson, Gillett, Elliott and some other northern florists who deal in hardy plants do not catalogue it, but the Reasoner Brothers, of Florida, advertise it. But it isn't strictly a southern plant at all. In Gray's manual it is given as indigenous to "sandy fields and banks, from Connecticut to Illinois and southward." It abounds in New Jersey. Twelve years ago last September I was visiting Mr. Taplin at South Amboy, N. J., and in the morning went down into the woods and alongside a ditch in an open clearing I found this *ipomœa* in quantity spreading over the bushes and blooming beautifully. But such mosquitoes!

The firm referred to above also say, "they are as easily grown as potatoes, and in the fall after the vines have been killed back by the frost, the tubers can be lifted and stored away over winter with the dahlias, gladioluses, etc." No, no, this isn't at all necessary, the plant is as hardy as a dandelion. I had it for years as an outdoor hardy plant at Boston and never knew it to suffer in the least in winter. The root forms an immense tuber, according to Gray, ten to twenty pounds, but oftener in the form of long, straight down, thick, fleshy tubers or tuberous sticks, that penetrate three to four feet deep into the ground.

Now this is one of the good things as yet asleep and it grows and blooms better here at home than it does abroad, but to show you how much it is appreciated in Europe let me quote from an article in the London *Garden* Sept. 2, 1882, and which was written by the Rev. Henry Ewbank, who has at Rhyde, Isle of Wight, one of the fullest and loveliest

THE HALF MOON.

gardens in England. "Of good things

* * in bloom now with me I place at the head of the list this (*Ipomæa pandurata*) North American plant. * If the summer be hot it is an exceptionally beautiful plant, and it is at its best in August and September. * * In a dry and hot summer it is a glorious sight. It was sent to me by Mr. Falconer, U. S. A., and its arrival marked a red letter day in my calendar. Its large bells, of the purest white, have an eye of deep purple, which serves to accentuate the whiteness in which it lies embedded. For years I have thought that a large white convolvulus which covers the porch of my house and runs riot over an arbor, festooning it everywhere, was quite unapproachable. In its own line it was king * * but you would not look upon the convolvulus when the *Ipomæa* had its way. * * I never knew anything to be so completely put out of count before, and I almost grieve over the de-thronement of a very old favorite. This *ipomæa* has a large tough root which very much increases through age; it year by year becomes stronger."

WM. FALCONER.

Chrysanthemum No. 27.

In regard to this chrysanthemum known under the two names, Snowball and Mrs. S. Humphreys, Mr. Henderson sends us a letter recently received by him which we give below:

DEAR MR. HENDERSON:—My confidence in your practical sagacity has a fatal blow. You neglected that opportunity to make the greatest trade surprise ever presented to a chrysanthemum grower when you let "Mrs. Humphreys" out as if she belonged only to the common crowd of this family. Did it not occur to you that the æsthetic preferences which are immortal are those that are founded on symmetry and grace while those that are based on eccentricity are transitory? A Yorkshire terrier or a frowzy Topsy may astonish but the grotesque always fades before that which goes to the heart for its intrinsic elements of beauty.

"Mrs. Humphreys" has three lives and in each she is supreme, 1st, as an intensely white and imbricated shield with a pale apple green eye, soft as that of an antelope, consisting of the still unblown petals in its center, sitting on its snowy face like an emerald on the bosom of beauty and its uniqueness is something seen in nothing else; so harmonious, so very beautiful

in its soft contrast. 2nd, when this pale green gem fades by fullness of bloom what a dazzling aspect it presents. It takes nearly a full month to reach this phase of expansion and during both stages it is startlingly beautiful. The last stage, of almost another month, it becomes a glittering and perfect sphere which makes the things we have called snowballs seem unpolished and indifferent. To call the thing pictured as "Snowball" identical with this blooming sphere is preposterous. That is what I write to you for. (See FLORIST of Jan. 15 page 254, and in Jan. 1.) Just how long we may have this plant in bloom I cannot say as the big plant from you began first of October, and the cutting from it bloomed in a 5-inch pot has now, January 21, been 10th of its early expansions, still with their emerald centers. Still I think the snowball phase might be shown in perfect condition nearer to first of March than of February. Looking at this plant in all its aspects it is without a rival among known chrysanthemums and to make this "identical" with a commoner variety inclines one to be profane. Hoping that you will be able to recognize the supreme achievement next time one occurs, I am faithfully yours,

Jan. 21.

CONNECTICUT.

[Our illustration of the flower did not do full justice to it we admit, still we are inclined to think that it showed the general appearance of the flower more accurately than any of the engravings in the spring catalogues. As to there being any difference between Mrs. Humphreys and Snowball, they are now admitted by all interested to be identical, hence any further controversy on this point would seem superfluous. That it—whatever its name—will prove a very desirable addition to our list of white chrysanthemums there can be but little doubt, unless next season's experience with it should prove very different from that of the past season.—ED.]

Black Rust on Verbenas—A Few Words of Caution.

One of your contributors in a recent issue writes concerning the so-called rust on verbenas and says that the microscopic insect causing it does not seem to be affected by any of the insecticides in common use. He advises throwing out the plants attacked as the only effectual way to fight it. Plant growers have been much too careless in this matter and have sent plants over all the land with the published assurance that they were healthy, but which have carried the pest to stocks previously free from it.

If your stock is really healthy and you get plants from another grower keep them entirely separate from your own until you know it is safe to join them; even though it requires a year to decide. Do not use the pots they grow in for your own plants; nor set your plants in boxes that have been used to move the others until pots and boxes have been subjected to some treatment that will destroy all animal life about them. Grow the two stocks in different houses, on different grounds in summer, and propagate them separately. In short, quarantine the new plants perfectly until you know they are free from disease.

Another caution: beware of verbenas seed not of your own saving. Some advise growing verbenas from seed and in this way escape the trouble; but—although I have not actually proved it yet—I feel certain that the insect in some stage of its existence can be and is carried on the seed and unless destroyed is ready to attack the new plant as soon as it germinates. Although the insect producing this disease may sometimes be seen on the surface of the leaves it probably burrows in their substance to some extent and is thus less affected by any remedies that are tried in the usual way; but if applied properly and persistently it will certainly yield to them.

Franklin, Pa.

W. T. BELL.

The "Half Moon."

The illustration shows a design arranged for a reception of a society known as "The Hollands." It was between five and six feet in length and represented a ship of the time of Hudson.

The hull was made of dark red carnations with a band of pink ones around the upper edge and with a small spray of hyacinth around the upper edge for rail. The masts were purple violets as were the yards. The rigging was made with hyacinth blossoms strung on fine wire. The steps of the ladders were red bouvardia. The flags were silk. The first one was blue with a half moon. The other one was yellow, white and blue. The furled sails were of bouvardia strings looped together. Two small brass cannons were in the bow. Water was represented by adiantums in which was a panel of purple violets with the name of the vessel in Dutch. It was arranged by Harft Bros., New York.

Mushrooms—Guarding the Secrets.

"A man in New Jersey who grows mushrooms in cellars has made lots of money at it," a friend wrote to me. Samuel Henshaw when he was in business in Staten Island was reckoned the champion mushroom grower around New York. Mr. H. came to see me the other day and I asked him about this Jerseyman. "Oh, no, I don't know him, but I've been to his place. But I only got the length of his fence and looked over when I was confronted by a rough-appearing man who wanted to know what I wanted there, and as he was backed by a couple of big vicious looking dogs, I didn't argue the matter with him. He never lets anybody inside his place."

But as I was anxious to see this Jerseyman I went there next day. From over the fence I could not see man, club or dogs; thus emboldened I ventured into the yard. There was nothing here and I couldn't find anybody, but every entrance to the buildings and cellars was securely locked. From the yard I returned to the street and went to the man's house.

Here I came in contact with his family and was more completely defeated than if I had met the guardians who intercepted Mr. Henshaw. It was of no use, I talked my prettiest and used every persuasion and persistence and not only would they not let me see inside the mushroom cellars, but they wouldn't even let me see the man himself. Well, what's the meaning of all this secrecy? Money. There's money in it.

WM. FALCONER.

Carnations and Soils.

Regarding the experience of Mr. Chas. Hartwig with Hinze's White related in last issue we will add that the soil at his old place where he met with continued failure is a sandy black muck, low ground, a soil generally described as good celery soil. On his new place where he had such gratifying success with the same variety the soil is a light clay, much heavier than the soil at the old place.

While Garfield always did well with him at his old place it has done still better in the soil at his new location, which has convinced him that this variety also does best on a heavy soil. He says no scarlet carnation has equaled Garfield with him, E. G. Hill having proved far inferior. He believes Garfield is not sufficiently appreciated by eastern growers. He has been cutting Garfields in quantity since November. It is very free.

Carnation Disease.

I wish to express my appreciation of the article in the FLORIST of January 15, by Prof. Seymour, giving a description with illustrations of the fungus *Septoria Dianthi Desm.*

It may be useful to growers of carnations to know the present condition of the plants affected after two months have passed. It is evident that the source of the trouble is the atmospheric conditions and not the soil, as plants not injured by the disease have grown vigorously. It was mostly confined to one variety, No. 82, other sorts being slightly affected. It first appeared during very prolonged damp weather in October on the mature leaves, the ends of the shoots and the buds remaining healthy producing good flowers.

After being satisfied of the fungoid nature of the disease, I syringed once or twice on bright days with the sulphur and lime mixture and evaporated sulphur on the furnace without much effect. I then tried Fir Tree Oil, syringing with a weak solution at night, one bench at a time, that the air might not become too damp. The effect was not marked. Some new spots appeared evidently where drops of water remained longest. For the last few weeks have avoided wetting the foliage at all, carefully watering underneath, and have spent considerable time removing the dead and diseased leaves and burning them. Plants that have been cleaned look healthy and grow and flower well, but of course the number of flowers is diminished. I notice that plants the least injured were those lifted

when the ground was dry from the driest part of the lot, while some lifted after heavy rain from a hollow where the soil was moist were injured most; also the benches underneath the top ventilators suffered more than the side benches.

The "black mold" mentioned in Prof. Seymour's article does not seem to be connected with it, as I have noticed it for years on dead leaves underneath, which were in moist, confined air. The fungus does not seem to poison the whole plant as the stems still convey sap and nutriment, though a spot of fungus may extend entirely around it.

At the present time, January 21, there is little if any appearance of new spots. Perhaps ten or fifteen plants in a thousand have died. Anna Webb, Florence, Silver Lake, La Purite (white), Daisy, Wm. Swayne, L. L. Lamborn, White Gem, Fascination and Mrs. Mangold have been almost free from it.

I have noticed instances of this fungus for several years. From my practical standpoint prevention is the most important thing to be determined, and the suggestions of Prof. Seymour in regard to watering and dry atmosphere are in accord with my observation. I would add that of free ventilation and perhaps early firing in autumn. I have not tried the solution of lime and copper sulphate.

SEWALL FISHER.

Framingham, Mass.

Carnations and Soils.

The question which I propounded to Mr. Whittle seems to have struck a key note. By a comparison of methods and results is it not possible to ascertain to a certain extent what Mr. Whittle is willing to relegate to science to answer?

We had a theory that carnations originated upon a sandy soil would not reach perfection on a clayey soil, and vice versa, and Mr. Whittle's article seemed to look in the direction of our theory, but when we read Mr. Hancock's observations we felt we had struck a snag. He says his Hinze's Whites develop finely in a soil that is "light and porous, rather sandy, having no clay, but rich in vegetable matter," while ours attain the same results in a heavy clayey loam with a liberal admixture of manure. Our experience with Orient, Florence, Alegatiere and Scarlet Gem tallies exactly with that of Mr. Hancock.

Further, while Mr. Herr gets 3-inch blooms in a three quarter span rose house and solid beds we get ours in an ordinary eleven-foot house and on raised benches. This diversity of methods and contiguity of results is a nut for somebody to crack. We would like to hear from Messrs. Whittle, Hancock and Herr concerning temperature, ventilation and water.

We agree with Mr. Whittle in deprecating the sending out of new varieties until fully tested. We have a few new varieties ourselves, one of which has been pronounced by H. A. Siebrecht and others as the "finest of its class," which they have yet seen. When we have tested it for a couple of years and find it is still the "finest of its class" it will be time enough to put it on the market, and even then it will be with fear and trembling, for we firmly believe that in some localities it will be a failure, no matter how nearly it may have reached perfection at the point where it originated.

Saddle River, N. J. JOHN G. ESLER.

CARNATION TIDAL WAVE.—Messrs. W. P. Simmons & Co., Geneva, O., send us

a bunch of two dozen handsome blooms of this new carnation. The flowers were of good size, rose pink in color and very fragrant. The specimens received were all on long stems and from the number of buds with the flowers we should judge the plants to be prolific. The color, size and fragrance should make this a very salable cut flower.

Long Island Notes.

BY WM. FALCONER.

COMMODORE SWAN, of Oyster Bay, N. Y., a gentleman of leisure and means and a sincere lover and cultivator of flowers and pretty plants, has resolved to start in the florist business. He is now building more greenhouses and will soon issue a catalogue. He intends to restrict himself to the plant business and handle only the most desirable sorts.

IN ONE OF MY notes in the FLORIST some time ago I mentioned that I had never known *Musa ensete* to produce suckers. Commodore Swan tells me his experience has been different. Some years ago he bought some plants of *M. ensete* from Chas. Reeser of Ohio, and that one of these, after a year or so, threw out some suckers, which he removed and grew on as separate plants.

DAVID ROSE.—Being in Brooklyn the other day I called on David. He is Mr. Pratt's gardener. What a comfort these suburban gardeners must take in their work, for they have roomy and luxurious greenhouses and every facility to do good work that money can supply. But David is a good gardener, so is his father, and so was his grandfather.

HERE, as in other pretentious suburban gardens, the main conservatories are ample structures, in which water and artificial rock work are happily blended, and palms, tree ferns and other imposing tropical subjects are planted out in natural style, and a variety of lianes, creepers, arums, ferns and mosses and other sun-shunning denizens luxuriate beneath and clamber up the stately stems and spread upon the ground while gay leaved plants are perched around next the glass and gorgeous orchids hang in cabins from the roof.

OF *CATTLEYA TRIANÆ* a score of massive plants, more flowers than foliage, were suspended from a crossbar in the conservatory. A splendid species for winter blooming. Some eighteen months ago these plants were bought at auction in New York, they then were newly imported from their native wilds. Rank masses of *Phajus grandifolius* were also in stately bloom. *Laelia anceps* and *calanthes* were just past and lots of *dendrobiums* in a cooler and drier corner were only waiting for a little encouragement in the way of warmth and moisture to start them into growth and bloom.

PRIMULA OBCONICA is one of the best liked of all greenhouse plants, either for cut flowers, window or parlor decoration, and is making pronounced inroads upon the popularity of the older Chinese primroses, and the order is: "Get more of that."

THE SPOTTED OR HERBACEOUS *calceolarias* are much grown here. They like cool quarters, a place near the glass, but shaded from bright sunshine, rich soil, plenty water, no check from sowing till blooming time and complete deliverance from all insect vermin. These were sown, David told me, about the first of September. This is late enough.

DRACENA GOLDIEANA is the favorite

WEDDING ARRANGEMENT.

in its line, and is most preferred when from twelve to thirty inches high. A large specimen is now and has been, for some time in bloom, but so far as we could see there is no trace of seed setting.

THE MARGUERITE LEAF-MINER.—David tells me that two years ago this insect was so destructive about Brooklyn that it completely ruined his and some other gardeners' Marguerites and cinerarias. But he didn't observe it last year nor has it put in an appearance this winter. And this state of affairs seems to be general in the East. In the *FLORIST*, page 297, March 15, 1887, I referred to it as *Phytomyza affinis*, but Dr. Lintner, our state entomologist, who has thoroughly investigated the subject from specimens contributed from here (see his Fourth Report, 1888, page 73), has decided that it is *Phytomyza lateralis* (Fallen).

GUS BENNETT lives near by and is gardener to Mr. Brown. Gus is the second son of the late Wm. Bennett, of Flatbush, who was one of the best plantsmen who ever came to America, and he loved his plants as he did his children.

SPACIOUS and well appointed greenhouses, well filled and well kept. Majestic, graceful, many colored and rare tropical exotics, orchids, roses and other gay flowering plants.

YOUNG V. OLD PALMS.—"When we started to fill these greenhouses we bought a lot of large palms, but I find it is much better to get young plants that are perfectly free from scale than old ones that are infested. By liberal treatment palms grow pretty fast."

OF HYDRANGEA OTAKSA he has a fine lot of young stocky plants in full leaf and showing flower buds. These plants are a year old; they were struck last spring, planted out in summer, lifted and potted into smallish pots early in fall, kept in a cold frame till New Year's, when they were brought into the greenhouse, and as soon as they had started to grow and showed flower heads they were repotted,

giving them a good shift. By shifting them now Gus claims that he gets finer heads of bloom than when he doesn't repot them. The old specimens he keeps in a cold pit for use on the lawns in summer. He speaks very highly of *H. rosea* as an outdoor blooming plant in summer.

ASPARAGUS PLUMOSUS and flowers of *Cœlogyne cristata*.—"I had a decoration to make some weeks ago and a drapery of this asparagus trimmed with the white *cœlogyne* flowers elicited much admiration."

CYTISUS CANARIENSIS and its variety *racemosus* are now in bloom and much appreciated. Raised from cuttings of the young wood in spring, planted out in summer and the branches allowed to retain their long flowing nature, they certainly display youthful vigor and graceful profusion. They are grown in a cool greenhouse.

FAVORITE DRACÆNAS.—*Dracæna Hendersoni* is one of these, because of its elegant and at the same time stately habit and richly variegated leaves. But we seldom find a large untarnished specimen. Some of the Wellesley (Harris') hybrids also appear to fully as much advantage as do those given to us from Europe.

DAVALLIA PALLIDA (Mooreana) occupies a large pan and forms a beautiful specimen some eight feet across. Once well started it is one of the most ample and comely of ferns. He has the finest specimen of *Polypodium subauriculatum* I have ever seen. The plant is growing in a large pan raised six feet above ground, and the fronds rise up, arch over and hang down to the floor; some twenty of these fronds are nine feet long. The new *Nephrolepis rufescens triplinatifida* (see *Fig. FLORIST*, Nov. 1, 1887), grows beautifully in a warm stove and is much appreciated. *Nephrolepis davallioides* has fronds six and seven feet long and the comelier crested form *N. d. furcans* is the best of all bold basket ferns for

house decoration or greenhouse work. For small baskets and adapted to a cooler greenhouse is *Davallia Mariæsi*, whose rhizomes can be so interwoven as to form a basket and the elegant fronds burst out all around forming a ball of green. This is a deciduous species, dying off in November and taking two month's rest. In small hanging baskets *Adiantum caudatum* and *A. Edgeworthii* are grown and their slender fronds bend over on all sides of and hide the basket, and as the tips of the fronds are inclined to the bottom of the baskets they root there and start fresh plants that in their turn emit a fringe of pendant fronds.

Wedding Arrangement.

The illustration is of a portion of the decoration at the Brokaw wedding arranged by Bogert, New York. Of the double banked mantel the upper was of roses and chrysanthemums and the lower of chrysanthemums of mixed colors. From the lower one hung festoons of *Lygodium scandens* caught up at the center with a bunch of pink roses.

The corners in front of the windows were each filled with groups of palms and plants of white chrysanthemums. A large wreath of *La France* roses hung in front of the mirror between the windows where the ceremony was performed.

At the mantel the room was divided by strings of roses supported near the center by two large rhaps with roses at their base. The idea was for the groom to break the string in the center on the way to the place where the ceremony was to be performed.

F. A. B.

Taxing Plants.

During the meeting of the Wisconsin Florists' Club recently, a question was put in the box which proved to be a very interesting one to all growers in our locality, and I believe it will be to the benefit of all to have it freely discussed. The question is "Why do we pay taxes on our plants?" They are taxed as personal property. There is a law, we are told, exempting perishable goods, also one exempting growing crops. It is a question of fairness and of legality which we florists should settle, and before going further ourselves, we wish to ask that the other Florists' Clubs of the country inform us through your columns whether they in their cities have a like grievance? If we find that we are all in the same boat, it seems to me advisable to request the officers of the S. A. F. to take it up, but if it proves to be simply a local trouble we wish to be sure of the circumstances so we can fight it out alone.

Milwaukee.

C. B. WHITNALL.

Bone Meal.

I am perplexed! Bone meal or bone flour is the cause. It used to be said that ground bone as a fertilizer was of very little value—or rather, only the dusty particles were immediately available as plant food; that the larger particles were so slow in decomposing that it was comparatively worthless for greenhouse uses.

One firm of fertilizer manufacturers has made a specialty of making a grade which is ground as fine as flour. Now another set of wise men say that there must be acid in this fertilizer or it could not be ground so fine. It was said in such a way as to lead those who listened to understand that acid in bone of any

kind is a detriment. I am totally in the dark in these matters, so I lay myself before your generous readers to get, if possible, some information and possibly a little consolation.

In referring to a tabulated analysis of commercial fertilizers I find that all the bone submitted contained more or less phosphoric acid, some being soluble, some reverted and other again insoluble. Is it any wonder I am perplexed?

D. Y.

The Floral Decorations at the Vanderbilt Ball, New York.

Last night I enjoyed a rare treat. Accidentally I learned last Saturday that Cornelius Vanderbilt was to give a ball and Mr. Klundler, the florist, had *carte blanche* to decorate the house. This was a chance not to be missed by a florist from "way out west," to see how the New Yorkers are "doing it" not on "dress parade" in a worlds fair or in a competitive display in some floral hall, where a florist is hampered with rules and restrictions of a premium list. No, this display would be far superior to such a one, as it would show the florist in "real action."

Through my connections in this city I had no difficulty to gain entrance to the V. mansion and take a stroll through the gorgeous apartments which, a little while later, should be filled with the aristocracy of New York. The floral decorations were finished, the florists had left the premises and the tables were set for two hundred. All was ready for the guests when your correspondent entered the house from 57th street. The entry has carved oaken walls and ceiling; opposite the door is a broad, beautiful stairway of about eight or ten steps; to the right and left of this hang the life-size oil paintings of Commodore V. and W. II. V.; a half looped up oriental portiere of a creamy white tint hangs across the head of the stairs and divides this apartment from the hall beyond; to the right of the foot of the stairs is an open door leading to the entry room for the billiard and card rooms below; two large antique bronze vases from the caps of the balusters and from two black antique lamp posts falls a mild light over the surroundings.

This entry or stair hall was decorated as follows: The vases, about two feet in diameter, were filled with yellow tulips and yellow narcissus arranged in a loose natural way in a manner that about a dozen of each variety were in a group or cluster; as foliage, sprigs of English ivy stuck in in a careless irregular manner, and native fern leaves were used; the background for this display of "yellow" was formed by a solid bed of orchids on the plants, the flowers hanging to the right and left of the balustrade; at both sides of the head of the stairs, touching the paintings above mentioned, stood two handsome specimens of cocos palms. Standing at the foot of this stairs and turning a little to the right, you caught a glimpse of the entry room. The walls and ceiling of this are polished ebony, decorated slightly with gold and mother of pearl; the mantel, also black and gold, is opposite the door, on this stood two small vases, each containing about one dozen American Beauty roses, and 'beauties' they were, averaging 4½ inches in diameter; these two were just carelessly stuck in, care being taken to have the stems of different height to make them appear natural. The effect produced by these few flowers with their foliage on the polished black background, was simply

immense. From the stairway they appeared like two pictures of roses painted on the wall. Only this and nothing else constituted the floral decoration of this magnificent little room.

Entering over the stairs into the main hall we see before us another stairway leading to the upper floors of the house. This stairway has but one baluster, as it runs alongside of the wall, but at a height of about six feet it makes a turn to the right, displaying its balustrade. Along the entire length of this railing, as far as it was in view, white azaleas in pots were placed, forming the upper border, then followed white lilac intermixed with vinca vines, these were in turn followed by various varieties of orchids hanging irregularly out of what appeared like a rock work and which was formed down to the floor with Virginia laurel boughs. On top of the baluster set a bunch of one hundred Magna Charta roses, while in the corners formed by the stairway stood large specimens of cocos and arecappalms. Immediately to the right there is a large fireplace, the mantel shelf of it is about ten feet from the floor, supported by two large carved oaken figures. In this fireplace lie two rustic logs, apparently burning, the flames being imitated with scarlet tulips and red hot ashes were figured with scarlet geraniums; to the right and left of these burning logs, but without covering or hiding any part of the carved figures, stood two fine specimens of yews in pots, while in the background bunches of single white primroses with their foliage and vinca vines reminded one of the rough coating of an old-time fireplace back; bunches of flowers hung up inside the fireplace in imitation of some useful articles our forefathers used to appreciate I suppose, made the "fireplace of the old homestead" complete. The mantel shelf was covered with orchids, their flowers hanging over the sides in all directions.

Close to this fireplace, about eight feet from the floor is a little window. The decoration of this insignificant little space was in keeping with the old homestead and a perfect little gem of floral decoration. So simple and yet so effective! A *Dracena indivisa*, a white azalea smaller in size than the *dracena* and one conspicuous orchid were all the plants used for it. The bulk of the decoration rested in the right hand corner; the pots were hidden by green foliage, part of which together with the flowers of the orchid hung in a careless natural manner down the wall.

In the drawing-room where the dancing was to go on only a few specimens of palms were used in safe corners. The musicians were on the same floor, but hidden behind a balustrade six feet high made of laurel boughs which again was crested with a compact row of orchids, over this balustrade rose the crowns of three handsome cocos palms and the four spaces thus formed were spanned over by orchids fastened against heavy wire arches. Last but not least I must mention a little fireplace in this same drawing-room close by the gorgeous display of orchids, this was modestly decorated with dark green foliage, native fern leaves, etc., and from the midst of all these, as if by accident, peeped a modest plant of 'Marguerite' daisy.

I found it strange that not a sprig of smilax was used in this decoration and learned since that many people "of society" have a dislike for it, and it is therefore banished from many houses.

The decorations of the dining tables consisted of loose bunches of flowers and

ferns, and among the bunches carried by ladies I noticed some containing white violets as one half and lily of the valley as the other, or Ulrich Brunner roses for one and heliotrope for the second half; others had lily of the valley for one and orchids for the other. I am told that such bunches range in price from \$10 to \$35 each.

Considering the size of the apartments there were not many plants and flowers used in this decoration, but the manner in which they were displayed brought every one to count and the effect was impressive. Quality took the place of quantity and if the New York aristocracy makes the style for America, the American florists are to be congratulated that the old custom once more comes to reign.

CINCINNATUS.

Ranunculus Culture.

Unquestionably one of the most beautiful flowers of spring yet absent from many, if not the majority, of gardens. Formerly collections of named varieties were grown with much care by a few old florists, but these fanciers are now more scarce than growers of florists' tulips are; indeed the ranunculus is scarcely grown as a florists' flower, but for decorative purposes and for market, the cultivation of varieties in mixture is extending. The old florists used to be very particular in choosing suitable positions for their ranunculus beds, also in the preparation of the soil and planting. Here are the instructions of one of them:

Situation.—It is only a waste of time and money to attempt to grow the plants within the influence of a smoky atmosphere near large towns, or upon a high hill in a dry soil, or in a swamp. The florist must choose a place for the ranunculus bed neither too high nor too low; let it be a level surface, and if it be sheltered from the northern blasts so much the better.

Soil.—The soil should be retentive of moisture. The best kind is the virgin mold of some alluvial soil on the banks of a river, or some lowland pasture. It should be of a rather close texture, without any small stones or sand among it. Lay it up for a year, turn it over until it is well incorporated, wheel out the old soil to the depth of a foot or more, place a thin layer of very rotten cowdung at the bottom, and upon that the fresh soil. If the situation is low, with a wet subsoil it must be well drained; but if the subsoil is dry there is no necessity for drainage. If the soil should be thought too poor a small addition of decayed cowdung will be advisable, but it must be so decomposed as to appear like a black powder. Let it be thoroughly mixed with the soil whilst making the bed, in dry weather, about the month of September.

Planting.—The season for planting is in the early spring, as soon as the most severe frosts have passed and the ground has become tolerably dry. Some time about the end of February or the first week in March rake the surface of the bed in the morning of the day previous to that fixed upon for planting. Some recommend steeping the roots for twelve hours in water before planting, but we think this not necessary, except the planting season has been from some cause or other put off till the middle of April; then it may be useful. Supposing, then, that the weather is propitious and all things prepared, commence by drawing with a hoe a drill across the end of the bed, 1½ inches deep, if deeper the roots will be weakened the succeeding

RANUNCULUSES.

year, by forming a kind of stem nearer the surface, and if shallower the plants are more liable to be struck with drought. Plant the tubers, if large, four inches apart in the row; if small, $3\frac{1}{2}$ inches will be a sufficient distance, and cover them

with fine sand. This will cause the tubers, when they are taken up in July, to come out of the ground quite clean for keeping.

Very precise instructions were also followed in other details of culture, but

it is not as a florists' flower that the ranunculus is alluded to now, but as an ordinary garden flower that may be grown to give satisfaction by simpler methods of culture than those above described, though the instructions are

good. We have found it is not a waste of time and money attempting to grow ranunculuses near towns, as we have seen brilliant masses of them within two miles of Charing Cross; and, as to soil, they will grow in such as will grow good cauliflowers. In respect to the time of planting, some of the most extensive growers of these flowers for market have probably about finished planting their tubers now. They plant in November onwards, as the ground may be in suitable condition, not deferring the work till spring, but when severe weather follows and the tubers have started, being in what is known as the "milky" state, the surface of the ground is covered with litter, as in the condition indicated they are liable to injury by frost, but when the growth pushes through the ground they are regarded as safe, being quite hardy. When grown on a limited scale in gardens coconut fiber refuse would answer for protection if litter was considered unsightly. The advantages of late autumn planting consist in the roots taking good and deep hold of the soil, hence the plants better endure dry weather in late spring, which often causes them to wither prematurely when grown from tubers inserted in March. The flowers figured represent ordinary decorative forms and were grown in a London garden from mixed tubers, which are the reverse of costly. A small leaf-mining insect often injures the plants, the larvæ of a small fly similar to that attacking celery. Sprinkling with a solution of soft soap with half a wine glassful of petroleum well mixed in each gallon, applying in the evening, not in the morning, is a safe and good deterrent of the attacks.—*Journal of Horticulture.*

California Notes.

California is the home of the chrysanthemum. Here it shows up its very best everywhere out of doors. Here it needs no snuggling up in greenhouses. Our out of door climate exactly suits it, and every garden with a very little care may have them in perfection from midsummer until Christmas or longer.

The cool summer temperature of the coast counties seems to suit them best. Here in the city of San Francisco this 22nd day of December they may be seen in bloom in nearly every garden, with as yet no frosts to mar their beauty. In the warm interior valleys they bloom much earlier, but by planting in cool situations in the shade their season may be made to last a long time.

The same is true of many other flowers. The nasturtiums are largely used here for out door decoration. Even a plant so tender to frost as this is still blooming here freely. The old well known lemon verbeena grows here in door yards and forms a shrub five to eight feet high. We have geraniums in this city ten to twelve feet high that have not been cut down with frost for years. I know of specimens of the night blooming cereus growing and blooming for years trained on a wall out doors. The century plant, or American aloe blooms freely in Golden Gate Park. The broad leaved magnolia grows nicely here in the parks, but instead of only blooming in early spring as it does east, it may be found in bloom in this city nearly every month in the year.

It is a strange country with a strange climate. To-day the valleys and the mountains are covered with fast growing nutritious grasses and wild flowers every

where. The renowned golden California poppy may be gathered in this vicinity every day in the year. Oranges are now coming into market quite freely from the northern interior counties, where they ripen a month earlier than they do at Los Angeles and Riverside. Yet people east will persist in believing northern California cold. It must be cold when we now have ripe oranges from Shasta, one of the northernmost counties of the state, and this after last winter the coldest ever known in the state.

Northern California as yet has never been boomed and homes are comparatively cheap, where wood, water, rain, climate, health, comfort and good soil, where nearly everything can be grown, and all comforts enjoyed except sleigh riding and skating are here attractions. A man may have a fruit farm on which he can grow everything from the orange to the Siberian crab, surrounded with the grandest of scenery, in sight of perpetual snow and with deep snow within a few miles of his orchard during the whole winter, yet scarcely see a sign of frost on his place during the year; such is northern California.

Our state board of trade has at great expense fitted up a train of cars filled to repletion with California's products, which may be called California on wheels, and which will visit every portion of the Eastern States.

San Francisco, Cal. D. B. WIER.

Hail Insurance.

The approach of the hail season suggests reminiscences. At the first meeting of the Society of American Florists at Cincinnati, thirty-six persons signified their willingness to insure in a hail association, provided "a satisfactory plan could be adopted." After nearly two years of practical application no one will have the hardihood to assert that the "Florists' Hail Association" does not fill the bill, yet out of nearly a hundred members of that association only ten are on the list of florists who wanted hail insurance at Cincinnati. To-day the hue and cry is for plant insurance, yet what guarantee would the directors and officers of the "Florists Hail Association" have that those who now desire plant insurance in addition to that of glass, would not follow in the footsteps of the men who wanted hail insurance at Cincinnati.

I am satisfied that the insurance of plants against hail can be simply and satisfactorily arranged, but the "Florists Hail Association" should not attempt the venture until 5,000,000 square feet of glass is placed upon their books. The reserve fund will then have reached a point where plant insurance would be practicable.

It would be well perhaps to perfect a plan of plant insurance to take effect as soon as 5,000,000 square feet of glass are insured. In the meantime it is the privilege of every florist to benefit himself by insuring his glass against hail and at the same time assist in hastening the time when the "Florists Hail Association" will be able to extend its field of usefulness.

If the florists of America could be made to understand the safe and conservative basis upon which the "Florists Hail Association" is founded and the perfection of the practical working of the plan adopted, the million square feet of glass now insured would be quadrupled in the next ninety days. JOHN G. ESLER.

Saddle River, N. J.

New York.

William C. Wilson, the well known florist of Astoria, L. I., has made an assignment to William H. Williams for the benefit of creditors.

It is generally regarded as a temporary embarrassment rather than an actual failure, as it is believed that the assets are sufficient to cover the liabilities. The direct cause of the difficulty was the blizzard of last March which caused a heavy loss.

Boston.

CUT FLOWER TRADE.

The month of February shows a decided improvement in the cut flower trade. The quality of the flowers coming in to the city has also improved. Roses have advanced slightly in price. Carnations not so plenty as they were last month. White, pink and crimson sell best. The scarlet varieties are in very small demand. Tulips are now offered in good variety, but are not selling as well as they did last season. Daffodils still hold their popularity. Heath is beginning to come in in small quantities and is quickly sold. Orchids sell fairly well and among the novelties *Primula obconica* and the yellow English primrose take the lead. A. P. Calder is forcing a house of sweet peas. The same gentleman is making quite a success at forcing ranunculuses. For house plants nothing sells so well at this season as the cyclamen, and the varieties of this favorite which are offered here now are superb.

MASS. HORTICULTURAL SOCIETY.

The society is undecided as to the best course to pursue in repairing the damage which was done to the halls by the recent fire. The central location of the building makes it a most desirable site for a business structure and the income of the society could undoubtedly be largely increased by recognizing this fact in repairing and altering the building. A largely attended meeting was held to discuss the matter and resulted in the appointment of a committee to take the subject under consideration and report at a future meeting. The prevailing sentiment among the members present seemed to be that the society should in any event retain the present location for its library and exhibition halls.

On Saturday, February 2, the essay was upon greenhouse construction and heating, by W. D. Philbrick, of the *Massachusetts Ploughman*. The discussion which followed could scarcely be called a battle of the giants, and compared with some of the encounters in the S. A. F. between the hot water and steam gladiators, it was mild and harmless.

GARDENERS' AND FLORISTS' CLUB.

The annual supper of this organization took place on Tuesday, January 29. Eighty-eight members were present and it was as usual a most enjoyable event. The national society and kindred associations were all remembered when the toasts were called for and the wholesaler, retailer and grower were given their due share of attention in remarks both wise and witty. The musical portion of the entertainment was received with great applause. President Grey presided and Edw. Hatch filled the post of toast master with characteristic volubility.

The February meeting of the club was devoted to an essay on forcing hardy plants, by Jackson Dawson. No man in this country can talk on this subject as

Mr. Dawson can, and those who listened to him were well repaid for their time. The discussion which followed was equally interesting, showing that this subject is one in which many are interested and indicating that in the near future the forcing of hardy shrubs will become a most important and profitable part of the business. W. J. S.

Cincinnati.

The Cincinnati Florists' Association with its 125 members is booming, and prospects are that it will have 150 members by February 15. It is now fully organized with the following officers: Chas. L. Mitchell, president; B. P. Critchell, 1st vice-president; H. L. Sunderbruch, 2nd vice-president; Wm. Nolan, secretary; Rich. Witterstaetter, treasurer; Executive Committee: Fred Walz, Chas. A. Getz and Robt. Murphy.

A committee is now looking for permanent quarters which will when secured, be fitted up in fine style, as the association is promised one of the finest libraries in the country when they get a suitable place as custodians. There is already talk of a big chrysanthemum show for next fall and the chances for an early spring or Easter show are good. The society seems to fill a long felt want, as it is the only method by which to bring the growers and dealers together, exchange their ideas and views on different topics, etc., and a better feeling among them is already perceptible.

Harry Corbett wants every huckster and peddler of plants hung up on a sycamore tree.

B. P. Critchell has a new method of constructing greenhouses by using nothing but iron pipe for bracing, and posts with cement footings, etc. and has applied for patents.

Robt. Murphy has put in a new heating apparatus, his own idea and invention, which he is nursing day and night. He says he doesn't know whether it is hot water under pressure or steam. (No patent.)

Chas. A. Getz can give you more points about microscopic observations on the "Green Fly" than any man in Ohio.

Richard Witterstaetter, who grows the best violets and chrysanthemums in this section, now lays awake nights thinking what varieties he had best grow for the coming show.

Fred Walz, the conservative end of the executive committee, is bringing in some very fine Niels and Cooks at present.

The boiler shed and workshop at the greenhouses of B. P. Critchell & Co., in Carthage, were destroyed by fire Jan. 14, shortly before noon. Energetic work on the part of the attaches of the place, who were assisted by the people attracted by the fire, kept the flames confined to the building in which they originated, although the adjoining buildings were somewhat damaged by the heat. There was no one in the building at the time the fire started, but it is thought the wooden steps leading down to the furnace were ignited by the heat. The flames spread over the frame structure, which was twenty by thirty feet, so rapidly that even the tools in the workshop could not be saved. A quantity of bulbs were stored near the boilers and were consumed. The loss on the building, tools, bulbs and the damage to other buildings is estimated at \$1,000, with a small insurance. The most serious damage was the cutting off the steam pipes connecting with the various plant houses but these were soon in shape again. S.

News Notes.

HAMILTON, O.—Theo. Bock has added another rose house 85 x 11.

LOS ANGELES, CAL.—W. S. Lyon has withdrawn from the florist business.

ST PAUL, MINN.—Fisher & Fisher, seedsmen, are successors to F. N. Lang.

FREEDPORT, ILL.—R. W. Gardner has succeeded to Gardner Bros., seedsmen and florists.

ROSEDALE, KAN.—Edward Bunyor has built three new houses, two 60 x 10 and one 60 x 16.

HUTCHINSON, KAN.—A. Ellsworth has built two houses 75 x 22 and 25 x 12, also an office 18 x 12.

PHILADELPHIA.—Wm. G. Eisele has built the past summer at Torresdale two houses 21 x 100, two 11 x 100 and a fifth of same dimensions is now going up.

DETROIT.—A portion of the greenhouses of Peter Rush were destroyed by fire Dec. 23. His stock of plants was almost entirely ruined by fire and frost.

WICHITA, KAN.—Rose & Mueller have dissolved partnership. C. A. Rose retains the store at 404 North Water street and C. P. Mueller the greenhouse on Twenty-Third street.

NEWARK, N. J.—Fire from an overheated furnace did much damage to the greenhouses of Volhege & Schroedel at 322 Waverly avenue, January 2. Loss estimated at \$1,000.

BETHLEHEM, PA.—The weather here is mild; thermometer has not been to zero yet this winter, the lowest being 10° above. Business good and prospects for spring trade excellent.

LANSINGBURG, N. Y.—Geo. B. Lucas has added two more new houses, one rose house 60 x 16 and the other a propagating and fern house 60 x 6. He now has 5,000 feet of glass all heated by steam.

SAVANNAH, GA.—The Savannah Floral and Art Association has decided to hold a spring flower show in April or May. Geo. Wagner is out of the florist business and is growing early vegetables under glass.

ELMIRA, N. Y.—Mr. Albert Nendahl, the florist, died recently. He was in the greenhouse business in Rochester for thirteen years and was one of the first florists in the southern part of New York early in the '60's. He died suddenly of heart disease.

VICKSBURG, MISS.—A fine new greenhouse 18 x 56 is just being completed at the National Cemetery. The cemetery is becoming more beautiful every year and many more plants are used than formerly. It contains 75 acres and there are interred here 16,818 dead.

TERRE HAUTE, IND.—M. A. Hunt has recently erected eleven new houses, five 90 x 18 each and six 100 x 10 each, also a packing room 70 x 24 and office 18 x 11. The houses are all heated by hot water. Henry Graham has added three new houses, 85 x 23, 50 x 18 and 60 x 12 respectively.

NORFOLK, VA.—You were misinformed in regard to the Brambleton Floral Co. They did not make an assignment; a creditor levied on the houses and stock which were sold at auction and bought in by the agent of the creditor who is

now selling off the stock and will either sell or rent the greenhouses.

LONDON, CANADA.—Holiday trade about the same as last year, quality of flowers rather inferior, prices about the same, supply short during holiday week; principal call was for roses, baskets not in demand. The lack of sunshine in December makes holiday flowers poor and scarce.

NEW BEDFORD, MASS.—The statements as to the holiday trade here which appeared in a recent issue are not correct. The facts are that the trade was about the same as last year; prices about the same; no more demand for anything this year than last and we had enough to supply the wants of the people, but none to spare; roses and violets were in demand; loose cut flowers were more called for than baskets or set pieces. To say that we did not have half enough flowers to supply the demand is far from correct.

PHILADELPHIA.—At the meeting of the Florists' Club on the 5th inst. Mr. Charles F. Evans delivered a short address on the query "are orchids likely to take a prominent place in the cut flower market in Philadelphia," answering affirmatively. March 14 was fixed upon as the date for the annual supper, and Messrs. Cartledge and Westcott were made the committee of arrangements. The club has now, it is reported, over \$900 to its credit in bank. The club has secured a charter from the state legislature.

NEWBURG, N. Y.—A steam boiler at the greenhouses of Henry Carter exploded the night of January 14 doing much damage. The boiler was located in the cellar of Mr. Carter's residence and furnished heat for it and a range of greenhouses adjoining. A nearly round hole about 2½ feet in diameter was made in the boiler. The house was considerably wrecked and the loss will be heavy. No plants were frozen as a second boiler was in operation and carried sufficient heat for all the houses until repairs could be made. The cause of the explosion is not known.

LOUISVILLE, KY.—Joseph Coenen has erected two fine houses 80 x 19 each, at a cost of \$1,000. Jacob Schulz has completed his fine 12 room house. Haupt & Epping have added a new house 100 x 10, heated by steam. Chas. Reimers has built a 9-room dwelling and two rose houses 111 x 27, heated by steam. Ed. Morat has completed eight new houses 100 x 15 each. Wm. Walker has added two new houses, one 100 x 22 and the other 125 x 10; Nanz & Neuner two rose houses 100 x 20; F. E. Hodgeman a house 30 x 17. A. Lauer and Geo. Thompson have each recently built new residences. The past year has been a fairly prosperous and profitable one to those in the trade here.

BROOKLYN, N. Y.—Florist Philip Zeh, Jr., will probably remember the night of January 23 for many a year. His father's greenhouses are located near the entrance to Greenwood cemetery and he, like other florists in the vicinity, has a number of lots and vaults in the cemetery to keep in order. After making his rounds on the date named he brought up at the last vault at 5:30 p. m. As he entered he inadvertently slammed shut the outer grated bronze door which is provided with a spring lock, the key falling outside just out of arms length. He was securely locked in. Several women who passed that way shortly after

were badly frightened by what they imagined to be the cries of ghosts. Some of them ran screaming to the gateman at the Fourth avenue entrance. The old gray-headed man had heard all the ghost stories connected with Greenwood, and as they did not coolly describe what they had seen he paid no attention to their stories. It was nearly 7 o'clock the next morning before Zeh's calls attracted some one to liberate him.

BALTIMORE.—The present winter has so far been a most phenomenal one in this section at least. Until within the past two weeks we have really had little that savored of genuine winter weather, previous to that the days were generally mild and warm as May, and the nights not cold enough to make firing laborious. Two or three days before the present cold snap set in I saw on a neighbor's lawn hyacinths pushing up thickly in the beds and defying every effort to keep them under, but a couple of days later we had a regular blizzard that effectually checked their progress. At this writing the weather is more seasonable, but pleasant withal, and in this latter respect it resembles the condition of trade, which probably was never better at this season. Flowers are plentiful, the demand is excellent and prices are firm. By the way, I have been particularly impressed with the felicitous unanimity prevailing among us this season concerning prices. Referring to notes taken during the season of '87-'88, I find that there was a marked difference in the prices asked by different florists, and with nothing to warrant it so far as the quality of their respective stocks was concerned, this year however there is no underselling to "catch a job," and it is to be hoped that this golden rule policy will become a permanent institution.

PITTSBURG.—The floral decorations at the banquet of the Press Club are described as follows in the daily *Commercial Gazette*: "The beauty of the scene was immeasurably enhanced by the exquisite and novel floral environments prepared by the firm of J. R. & A. Murdoch. The central table bore the main design, which, as well as the rest, revealed the handiwork of Mr. James Dell. It showed a miniature of the famous Arctic exploring ship the *Resolute*, with her sailors and rigging sparkling with frost, and the stars and stripes glistening with ice. The hull was of white carnations and rested upon great blocks of crystal clear ice, illuminated by incandescent electric lights. Near at hand on the same table stood a floral model of *Cleopatra's barge*, composed of pink carnations and fitted with a pink silk canopy and sail. The oars were of crimson carnations. On the opposite of the *Resolute* stood a floral column of pink carnations surmounted with a "composing-stick," wrought in white carnations and bearing the word "Press" in darker flowers. At the base of this column a trunk of pink roses and lilies of the valley was placed and the words "Press Club 1889" appeared at this place. On the central table stood also a graceful scroll in pink carnations, roses, etc., in which the figures "1889" were ingeniously interwoven with the word "Press." This was, next to the ship and barge, the most attractive bit of floral work at the dinner. On the other tables were several great baskets of La France and Bride roses, lilies of the valley and vases of rich lined foliage plants, while on one of the ornate columns supporting the ceiling appeared a

large pair of quills placed crosswise. Before the musicians and at one of the doorways stood a verdant screen of cypas and areca palms, through whose interlaced foliage came the music of the orchestra.

Catalogues Received.

M. A. Hunt, Terre Haute, Ind., plants and seeds; Anna B. Nickels, Laredo, Tex. cacti; L. Green & Son, Perry, O., wholesale list nursery stock; H. G. Higley, Cedar Rapids, Ia., seeds and plants; Nantz & Neuner, Louisville, Ky., plants and seeds; Lenuault Huet, Ussy, France, wholesale list nursery stock; Boskoop Nursery Association, Boskoop, Holland, trees, shrubs and plants; F. Walker & Co., Louisville, Ky., plants and nursery stock; J. J. Harvey, Richmond, Va., plants and shrubs; Michel Plant and Seed Co., St. Louis, seeds and florists' supplies; H. W. Buckbee, Rockford, Ill., seeds and plants; W. Atlee Burpee & Co., Philadelphia, seeds; Jno. Laing & Sons, Forest Hill, London, Eng., seeds and plants; Thos. S. Ware Tottenham, London, Eng., seeds; same, plants; Joseph Sexton, Santa Barbara, Cal. plants and nursery stock; J. C. Vaughan, Chicago, seeds and plants; E. Hippard, Youngstown, O., plants and seeds; F. G. Mason, San Bernardino, Cal., trees and shrubs; Ludwig & Richter, Allegheny, Pa., seeds; O. A. A. Gardner, Byron, Neb., plants; W. Piercey, Forest Hill, London, S. E. England, chrysanthemums; V. Lemoine & Fils, Nancy, France, plant novelties; Smeeton, Coleman & Co., Little Rock, Ark., plants; J. B. Root & Co., Rockford, Ill., seeds; D. Lee & Son, Madison, O., plants, shrubs and trees; T. H. Spaulding, Orange, N. J., chrysanthemums; A. Giddings, Danville, Ill., plants; Currie Bros., Milwaukee, Wis., seeds and plants; Carl Cropp, Erfurt, Germany, seeds; John Gardiner & Co., Philadelphia, seeds; Iowa Seed Co., Des Moines, Ia., seeds; J. A. Everett & Co., Indianapolis, seeds.

A NATIONAL CHRYSANTHEMUM SOCIETY.—Most heartily do I agree with Mr. Thorpe, page 255, "That the time has come for a National Chrysanthemum Society." Count me one, and the sooner we get about the work the less will be the labor in bringing up the past. Why not commence the work at once under the auspices of the Society of American Florists?
JOHN LANE.
Chicago.

THE FLOWER inquired about by J. C. C. Downing in the *FLORIST* of January 15 is a zephyranthes, either *Z. atamasco* or *Z. Treatea*. The flowers of the two species are exactly alike; the only difference is in the leaves. Those of *Z. atamasco* are from $\frac{1}{4}$ to $\frac{3}{8}$ inch wide, while those of *Z. Treatea* are very narrow, almost round.
W. C. STEELE.
Switzerland, Fla.

THE OLIVE, its culture in theory and practice, is the title of a work by Arthur Tappan Marvin, received from the publishers, Payot, Upham & Co., San Francisco. The attention that olive culture is now receiving on the Pacific slope should make this book very acceptable to those interested. The subject is treated in an able and practical manner.

LANDSCAPE GARDENING.—Will some one give a school boy hints in regard to the special preparation which should be made by one intending to become a landscape gardener?
WEST.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By a good gardener. Address JOHN E. DEWALT, Box 146, Carlisle, Camb. Co., Pa.

SITUATION WANTED—By a florist, of 12 years' experience. First-class references. Address P. care American Florist, Chicago.

SITUATION WANTED—To make-up in flower store. Best of references. Address FLORIST, 175 B Tremont St., Boston, Mass.

SITUATION WANTED—By a practical rose grower, also by an assistant. Good references. Address D A C. Allegheny P. O. Pa.

SITUATION WANTED—As improver in the florist business by a young man who has had two years experience. Address FRED MORLAN, Damascus, Col. Co., Ohio.

SITUATION WANTED—By a young man who has had 15 years' experience in florist business and gardening. Good reference given. Address B. care American Florist, Chicago.

SITUATION WANTED—By a young man in floral store; has had several years' experience in all branches. References exchanged. Address B. P. GADD, 222½ Cass Ave., St. Louis, Mo.

SITUATION WANTED—By a young man as gardener in a large commercial place. American; well educated—competent to keep employer's books. Address GARDENER, Fort Hamilton, L. I. C.

SITUATION WANTED—A young man, age 21, wants situation with a florist; has spent six years as carpenter, and has had slight experience as florist. C. DUNCAN, 1319 N St., Lincoln, Neb.

SITUATION WANTED—By an assistant florist, well posted in rose growing, will be disengaged by first of March; best of reference. Address S. M., 4840 Mulberry St. Frankford, Philadelphia, Pa.

SITUATION WANTED—Practical florist of ability and long experience on all the requisites of the business. Private or commercial. For particulars address A. B., care American Florist, Chicago.

SITUATION WANTED—By a gardener; married; thorough practical knowledge of his branches. Can give very best of reference. Private or commercial. A. T. PETERSON, Riverside, Cook Co., Ill.

SITUATION WANTED—By a first class gardener; single, competent in all its branches to take charge of a commercial or private place. Best of reference. GARDENER, 943 Buttonwood St., Philadelphia, Pa.

SITUATION WANTED—By a first class gardener; thoroughly understands his business; married; no family; aged 34; highest reference from present employer. Address GARDENER, P. O. box 4, La Motte, Montgomery Co., Pa.

SITUATION WANTED—As gardener and florist; understands horticulture in all its branches; 20 years with the late Hon. Alex. Mitchell, Milwaukee. Private place preferred. Address JOSEPH POLLARD, 57 10th St., Milwaukee, Wis.

SITUATION WANTED—By a young man (American) of 7 years' experience in designing and retail flower and seed trade. Competent to take charge of such business. Good references from present employer and others. Address JOHN H. MILLER, 287 Main St., Springfield, Mass.

SITUATION WANTED—By a gardener and florist with 18 years' experience, competent in all its branches. Have full charge where now employed 5 years. Can furnish first class recommendations; German, married, small child; private place preferred. Address D 4, care American Florist.

SITUATION WANTED—By a good practical gardener; understands the care of flowers, vegetables, stock, and the laying out of grounds; is capable of taking the management of a fine place or private greenhouse and conservatory. Address G. H., care of Arthur G. Lee, 10 N. Clark St., Chicago, Ill.

SITUATION WANTED—By a thoroughly practical florist and gardener, well educated; capable of taking charge of the largest commercial places; can give the very best of references as to rose growing and getting up stock in general for large commercial places. A first class propagator in all branches, 17 years' experience; married; 32 years old, American born, Scotch descent. Address M. W. C., 325 Pearl St., Sioux City, Ia.

SITUATION WANTED—By a practical gardener and florist in the vicinity of New York City, to take charge of either a private or commercial place—private place preferred. 16 years' experience; understands the care of grapes and the general work connected with either place. Also a good cut flower grower. Roses and carnations a specialty. Can furnish good references. Address, giving particulars, GARDENER, basement 23 Old Slip, New York City.

WANTED—Catalogues and nursery trade lists. THEO. WIRTH, 24 E. 65th St., New York City.

WANTED—To contract with special growers, for our next season's stock of garden and field seeds. J. B. SUTTON & Co., Seedsmen, Ocala, Fla.

WANTED—Catalogues of nurserymen, florists, seedsmen and dealers in supplies for greenhouse construction. H. W. TRAYER, Morgan Park, Ill.

WANTED—One or two men florists or gardeners who knew and are willing to work out doors as well as in the houses. Only such need to apply. Industrious man of good habits will find steady employment. Apply to
R. MATTHEW,
149 Canal St., New Orleans, La.

WANTED TO RENT—A small greenhouse nursery in the vicinity of Washington or New York, with the view of purchasing it later on. Particulars with number of greenhouses and price to be sent to GUNTHER A. FRIEKEN, New Rochelle, N.Y.

WANTED—Partner in an established and rapidly increasing seed business. Must have some practical knowledge of market garden seed, or nursery business (or both). \$3100 to \$5000 ready cash required. A rare chance is offered. For particulars address J. B. SUTTON & Co., Seedsmen, Ocala, Fla.

FOR SALE—The A. W. Sawyer greenhouses at Sycamore, Ill. Address
MRS. ABRAHAM ELLWOOD, Sycamore, Ill.

FOR SALE—A good florist establishment in one of the best parts of Chicago. Address
Box 12, care American Florist, Chicago.

FOR SALE—Growing greenhouse business, in best town in Missouri, 10,000 inhabitants; no competition. Small capital. Good reasons for selling. If you mean business, address Box 626, Mexico, Mo.

FOR SALE—\$2,000 cash and \$1,500 in payments will buy an established greenhouse business and good dwelling in an Indiana county seat. If you mean business, address
WABASH, care American Florist, Chicago.

FOR SALE—In a New England city, greenhouses; 8,000 feet of glass; fine business; long established. Extra good summer trade at the beaches. Nice house; valuable real estate. Good reasons for selling. A rare chance. Address
MAY, care American Florist, Chicago.

FOR SALE OR EXCHANGE—Four greenhouses almost new, 6,000 feet of glass, heated with hot water, located in central Illinois. Plant and cut flower trade well established. Will take land or other property in exchange. Satisfactory reasons for selling. Address CHANDLER, care Am. Florist.

FOR SALE—Four greenhouses with business; also old established nursery—stock and business. Located near growing city, 30,000 inhabitants, within two hours of New York. Controls good local trade. No other nursery within 15 miles. Splendid chance for florist or young nurseryman with limited capital. Will sell separate and lease cottage and all land required for term of years. For particulars address
F. M. K., care American Florist, Chicago.

FOR RENT—Cheap. Extraordinary chance. Six good sized greenhouses; all improvements; hot water boilers and steam heating; croton water. Located at the main entrance to the largest cemetery in the City of New York. Well established trade by the same name that now has charge—over 15 years. Over 1000 lots to care for and decorate. Only responsible parties need enquire of
L. G. WILSON, Mt. Vernon, N. Y.

New Pure White Tea Rose The "QUEEN."

This splendid new Rose originated with us two years ago, and having proved valuable, is now placed on sale. It is

A PURE WHITE SPORT FROM SOUVENIR D'UN AMI.

A vigorous, healthy grower and continuous bloomer, producing a great abundance of Buds and Flowers all through the season. Flowers are PURE WHITE, showing no trace of Pink, makes good finely formed Buds and is moderately full. Petals are thick and of good substance, opens well, is a good keeper and very sweet. We believe it will prove especially VALUABLE FOR EARLY WINTER FORCING AS WELL AS FOR OPEN GROUND PLANTING, and recommend it for extended trial with the belief that it will be found a valuable acquisition to our list of Pure White Tea Roses.

PRICE: Strong well matured plants from 2½-inch pots, \$3.50 per doz.; \$25 00 per hundred. Two year plants from 5-inch pots, \$9 00 per dozen.

ADDRESS:

THE DINGEE & CONARD CO.,

ROSE GROWERS,

WEST GROVE, PA.

Mention American Florist.

Holiday Prices.

I have read with interest the communications from various sources regarding the sudden advance of prices for the holidays. I have always considered it detrimental to the trade generally, and from the holiday reports of the past year am thoroughly convinced of the fact.

While in some localities the average was above last year, in more it was the same or less. Can this not be accounted for from the high prices of '87. That the trade was not larger every where was not because people did not want flowers, but from the fact that they would not pay prices asked. I believe if the prices are advanced next season as for the past two seasons at Christmas our next reports will show a very decided decrease, and more reports similar to Davenport appear: "Evidence of a vitiated taste was noted in a call for metal and porcelain flowers and immortelles." I think it a mistake to call the desire to have flowers of some kind a "vitiated taste." Sensible people suit their flowers to their purse, and if they cannot pay the exorbitant prices asked for natural flowers will be satisfied with metal, porcelain, paper or satin flowers or immortelles.

To be sure we florists need some advance for holiday trade, but let us be satisfied with a legitimate advance, and in this way keep the public taste for natural flowers on the increase. Seldom do we find a customer (or hear of one even) who is willing to pay \$80 for five dozen roses, or even \$30 for the same. There are those who can afford these high prices and there are thousands who cannot. Would it not be better to sell to these thousands also, thereby making up in the aggregate by larger sales at lower prices? When people order two or three dozen choice roses for which they usually pay from \$2 to \$3 per dozen and have bills presented calling for from three to five times usual price it is not to be wondered at that they look ugly and "storm" about the price. Can they be caught again?

I am also convinced that this sudden advance is a temptation to many to "salt" their flowers for some time previous, and until they are worthless to the purchaser and detrimental to the reputation of the retailer and commission men. But says Mr. Advance, "Are not prices governed by supply and demand?" to which I answer yes, no. Such may have been the case in all branches of trade at one time, but where do we find it the case to-day. Why is our business exceptional?

I am in favor of making all the money we can legitimately from our business, but let there be an establishment of more uniform prices. I know it costs treble to grow flowers in winter as in summer, and yet cannot prices be regulated so as

to average the profit? Would it not be of interest and advantage to the trade generally for those who grow only cut flowers for the market to give the cost of producing different sorts per hundred on an average, per cent of loss, etc. throughout the year.

A. H.

[The practice of "salting" flowers having in nearly every case proved unprofitable to the grower for the past two years we believe that we shall be but little troubled from it in future. When a man finds that he is working against his own interest he needs no argument to change his tactics. If we had sufficient flowers to meet the holiday demand at usual prices there would be no advance at that time. How we are going "to sell to these thousands" without something to sell them is a poser. If only a portion of the supply was sold and the balance allowed to spoil rather than sell at a lower price the argument would hold good, but such is not the case. There was a near approach to this condition in some markets last December and if any serious losses were made in consequence those who met them have already been chastened and will fight shy of the rod in future. We can not see but what the highest price that all the flowers can be sold at is the actual market value of the same. "The establishment of more uniform prices" will be quite impossible until supply and demand shall be always equal. This brings into consideration the tactics of the buyer at times when the supply exceeds the demand. He will buy where he can get stock the cheapest every time. He is right, he would not be a business man unless he did. It is just as reasonable to ask the buyer to pay high prices when supply is large as to ask the seller to accept low prices when he can sell every flower he has got at higher figures. The suggestion that growers endeavor to throw some light on the cost of producing flowers of various kinds is an excellent one. We hope that any who can give us any reliable data will not fail to do so. Such would be of great interest and benefit to all in the trade.—ED.]

Frankfort, Ky.

The holiday trade in this city was about as usual and the prices were the same as at any time during the year. My customers will not submit to a change at any time in the price of flowers; I cannot make them see why they should pay more for cut flowers at Christmas, New Year's or Easter than at any other time.

The following are standard prices all the year round: Safrano and Bon Silene, \$1 50; Perles and Niphetos, \$2; Mermets, \$2 50; Niels, La France and Brides, \$3 per dozen. I have some American Beauties, Papa Gontiers and Cusins, but I can

scarcely give them away. I have had some very nice Beauties in the last two weeks, but I have only sold two at 25 cents each and I put the rest of the lot in collections of cut flowers to get rid of them. If I were to ask \$15 per dozen for Beauties as they do at Baltimore, or \$20 per dozen as they do at Chicago my customers would think I was crazy. I can sell all the red carnations I can raise and buy because they are cheap, but red roses won't go at all. There is very little demand for anything but white, yellow and pink roses, carnations of all colors and red geranium bloom with other cheap flowers for table use.

P.

[Our correspondent seems to have solved the problem of equalizing prices the year round. It would be interesting to know the amount of sales at the various seasons under this system, also whether he has any competition or not. According to his prices there are times when he receives more than florists in the large cities.—ED.]

The New York Market.

Trade is generally better since the middle of January; in some directions it is considered larger than the same time last year. Prices cannot be considered large, though increase is noted over the rates prevailing just before the holidays. Bulbs are very low and they certainly affect the price of roses.

Hybrid roses are fine and in good demand. Mrs. John Laing is being received in small quantities and seems likely to be a great success; it is much admired. Slaughter is sending in very fine Beauties, but they are generally off crop. Lilium Harrisii is very plentiful and will be more so.

Second class or poor quality flowers are not subject to regular rates; they have small chance of sale. Everything must be of the best.

EMILY LOUISE TAPLIN.

Chicago.

Roses are very scarce in this market, scarcer for this season than for many years past. There is also a shortage on all other flowers except red carnations and tulips, which are in good supply. Last year at this time the supply rather exceeded the demand with occasional decided gluts.

The cause of the scarcity of flowers the past winter is an enigma to all. The weather has been more favorable than for many years, double the amount of sunlight we are usually favored with, and still plants have not bloomed nearly as freely as in more unfavorable seasons. Growers report that roses have grown vigorously, presented every appearance of giving a good crop of bloom, but have rarely done so.

THE AMERICAN FLORIST CO., Chicago.

THE PROGRAMME of the Pennsylvania Horticultural Society for the year 1889 has been published. It contains the schedule of premiums for the spring and bulb exhibition, to be held April 2, 3, 4, and the chrysanthemum show November 11 to 16. In the schedule for the spring exhibition we note \$100, \$75 and \$50 offered for best collection of orchids in bloom. In the chrysanthemum show schedule four prizes, \$100, \$85, \$65, \$50, are offered for collection of 12 plants, 12 varieties.

WE HAVE RECEIVED from Mr. A. Giddings, the florist, of Danville, Ill., a very handsome calendar, which he is presenting to his customers as an advertisement of his business. It is of very large size and bears the figure of a little girl surrounded by flowers, lithographed in colors in a very artistic manner. It is really a work of art, the best of its kind that we have seen.

EASTER SUNDAY comes on April 21 this year. Lay your plans for Easter trade accordingly. Lent begins March 6.

Seedling Amaryllis.

Mr. W. Otto Gronen, Davenport, Iowa, sends us two blooms of a seedling amaryllis raised by him from Fidelio fertilized by Brilliant. He has christened it Barbara Pomfret. The blooms are of large size, creamy white penciled and shaded with red, throat green. A very handsome and striking flower.

Mr. Gronen writes that he sends us the flowers at the suggestion of a florist friend to show what an enthusiastic amateur can do in the way of intelligent and careful cross-breeding.

Though not in advance of many excellent varieties we already have it is apparently distinct and worthy of preservation.

Begonia Semperflorens Gigantea Rosea.

Please state in your next issue which is correct: Begonia semperflorens rosea gigantea or Begonia semperflorens gigantea rosea. BEGONIA.

[Our heading is the name as given by the introducer, V. Lemoine.—ED.]

Print your SPRING TRADE LIST in the AMERICAN FLORIST. It will cost you less money and do you more good than to print and mail your list yourself. We will print and mail your list, in the columns of this paper, to 5,000 buyers for much less than the postage alone would cost you. A full page in the FLORIST costs only \$42 for one insertion. It would cost you twice that sum to get up a list of your own and mail it to 5,000 addresses. Think it over! We can save you money and secure you better results at the same time, for the FLORIST is preserved while your trade list otherwise mailed would rarely be kept on file. We will print extra copies for you—from the type after being set—at a nominal rate if you wish extra ones to mail in response to requests. If half a page is large enough it will cost you but \$21 for the service.

OUR SEEDS NEVER HAD SEA-SICKNESS.

Fresh Home-Grown Seeds of
SELECTED PRIMULA OBCONICA.

We are the largest growers, and have the finest strain of Primula Obconica in this country, and have harvested an unusually fine crop of seed, which we offer to the trade at \$1.50 per 1000. Special rates for large quantities.

SEEDS AT YOUR DOOR AT WHOLESALE

Prices. Having grown a large quantity of the following choice and valuable seeds the past season and in order to introduce them, with our wonderful New Potato, into 100,000 homes, we make the following UNPRECEDENTED OFFER: For \$1.00 in postage stamps or money, we will send a box post-paid, containing one packet each of the following NEW AND IMPROVED SEEDS, and one medium-sized tuber of BOLEY'S GREAT NORTHERN SPY POTATO, the greatest discovery since the advent of the EARLY ROSE.

Wilson's Early Blood Turnip Root, earliest and best. Huston's Half-Long Winter Beet, best variety. Wilson's Best of All Pole Beans, good for snap-shorts in winter. Wilson's Best of All Bunch Beans, rich, tender, and buttery. Early Advance Cabbage, best and earliest. Wilson's Premium Flat Dutch Cabbage, best late variety. Early Green Cluster Cucumber, best for table use. Wilson's Long Green Cucumber, best for pickles. New Cory Sugar Corn, the earliest in the world. Wilson's Large Evergreen Sugar Corn, sweet and delicious. California or Golden Pop Corn, best variety. New Self-Blanching Celery, extra quality, needs no blanching up. Wilson's Extra Early Lettuce, heading sort. Jordan's Gray Monarch Watermelon, very large, sweet, and sugary. Miller's Cream Nutmeg Melon, best flavored in cultivation. Improved Round Yellow Danvers Onion. NEW SPANISH KING ONION, 3 pound onions from seed first year. Abbot's Improved Sugar Parsnip. Ruby King Pepper, finest, largest, sweetest pepper ever seen. JUMBO, or CALIFORNIA, the largest pumpkin in the world; has weighed 400 lbs. Early Rosy Gem Radish, best and earliest. New Chertier Radish, best summer variety. White Pineapple Squash, good for pies, keeps all winter. Early Summer Butter Squash. Turner's Hybrid Tomato, best and finest ever introduced. NEW ZEALAND FIG TOMATO, excellent for preserving; cured and dried, equal to the best figs. Munch Strap-Leaf Turnip, tender, sweet. Golden Globe Ruta Baga, best for table use. VEGETABLE PEACH, easily grown from seed first year; makes pies or preserves equal to the best peaches. Sample packet of Wilson's True Leaning Corn, the earliest and best field corn in cultivation. New Mammoth Zinnia, double as a Dahlia, bright as a rose. Washington Asters, very large all bright, beautiful colors. Giant German Pansies, best mixed, in all FULL-SIZED PACKETS, with DIRECTIONS FOR CULTIVATING, and ONE whole POTATO for \$1.00 FIVE boxes \$4.00, TEN boxes \$7.00, post-paid. Address plainly BUCKS Co., Catalogue sent free to all.

Will be mailed FREE to all applicants, and to last year's customers without ordering it. Incalculable to all. Every person using Garden, Field or Flower Seeds should send for it. Address

SEEDS.

My Annual PRICED CATALOGUE is now ready and mailed free to all applicants. It contains all the leading and most popular sorts of

VEGETABLE, FARM, AND FLOWER SEEDS,

Besides all the desirable novelties of last season, and nearly everything else in my line of business.

ALFRED BRIDGEMAN,

37 East 19th Street, New York City.

HUGHES'

SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc. If used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

E. GRIFFITH HUGHES,

Operative Chemist,

MANCHESTER, ENGLAND.

PRICE: { Put up in 1 gallon tin, \$3.25 } in New York
{ Put up in 1 quart tin, \$1.00 }

TO SECURE THE GENUINE ARTICLE, see that each tin shows a white label with red trade mark, full directions how to use, and the name of

Second Edition.

GEO. A. SOLLY & SON'S BOOK OF PLANS

For

Carpet and Ornamental Flower Beds. With many it is a difficult task to lay out a carpet bed, or fancy design on the lawn, and perhaps more difficult to choose the proper plants to harmonize, so as to give the best effects. The object of these drawings is to assist gardeners and amateurs, and to enable them to choose the proper plants for their work. It is expected that this book will supply a long felt want, as it is the first and only publication entirely devoted to Fancy Flower Bed Designs. This, our SECOND EDITION, consists of over 100 designs, finely engraved, on good paper, nicely bound, sent pre-paid to any address on receipt of Price, \$3. GEO. A. SOLLY & SON, SPRINGFIELD, MASS.

TREES

Root Grafts—Everything! No Larger stock in U. S. No better, no cheaper. Pike Co. Nurseries, Louisiana, Mo.

BURPEE'S FARM ANNUAL FOR 1889

ENLARGED and IMPROVED.

A handsome book of 168 pages, hundreds of illustrations and beautiful colored plates, painted from nature; tells all about the **BEST SEEDS**

including rare novelties of sterling merit—Bulbs, Plants, Thoroughbred Stock and Fancy Poultry.

THE BEST and MOST COMPLETE Catalogue published for the Garden and Farm. Mailed free to all customers; to others on receipt of 10 cts., which may be deducted from first order.

FOR 20 CENTS (ten 2c. stamps) we will mail the FARM ANNUAL and one liberal packet each of Royal Prize, (Fancy, Show and Giant) Pansies, 15 magnificent named varieties, mixed, Eckford's New Sweet Peas, and our Fordhook Largest-flowered Phlox, OR one package each of New Greek Winter Onion, long keeper, delicate flavor, New Mid-Summer Lettuce of superb quality, and the new Matchless Tomato. Both Vegetables and Flowers, six grand varieties of unequal merit, mailed (with the Farm Annual) for 40 cents in stamps. We want everyone who orders our New Catalogue, also to try our Warranted SEEDS—Few equal—none better.

IF YOU WANT MORE information, or have no stamps handy, then write for BURPEE'S SPECIAL LIST OF NOVELTIES, mailed FREE to any address, on Postal Card. Write Now!

JOHN A. SALZER,

Seed Grower,

LA CROSSE, - WISCONSIN.

Come, Fellow Farmers!

It is the good things and the new things you want. Here is a Catalogue full of them! Do you want tested seed, raised from stock selected with extra care, grown from the best strains, got from the original growers? I aim to have mine just such. Do you want new varieties that are really good, and not merely novelties? I aim to have mine such. Do you want seed that the dealer himself has faith enough in to warrant? I warrant mine, as see Catalogue. Do you want an exceptionally large collection to select from? Mine is such. Do you want them directly from the grower? I grow a large portion of mine—few seedsmen grow any! My Vegetable and Flower Seed Catalogue for 1889 FREE to everybody. JAMES J. H. GREGORY, Marblehead, Mass.

Mention American Florist.

Cleveland.

A. Schmitt, of Glenville, has some exceptionally fine houses of carnations. Silver Spray seems to excel Henderson; Portia, though not so large, is of a better color and a better keeper than E. G. Hill; the latter seems to get a silvery decayed looking color after standing on the plants a day or two, and when cut it has the same characteristic.

Long has removed his store from the Public Square to a pleasant new location on Erie street.

For system, order, method and neatness commend us to Storrs, Harrison & Co., Painesville. They have great faith in Meteor and are growing it in large quantities. Mr. George reports heavy orders already in for it. Mr. Harrison of this firm is building a very handsome large house with all modern conveniences which is a decided ornament to the neighborhood.

There is talk of a social reunion of the members of the Florists' Club soon. Hope it will materialize. C.

PLANTS AND ROSES, ETC.

PAPAVER ORIENTALE, most gorgeously handsome orange scarlet flowers. Retailing readily at our store for 25c. each. Plants perfectly hardy; rare, and most desirable. \$5 per 100; \$55 per 1000.

CHRYSANTHEMUM CHINESE WHITE LA PURITE, the most profitable for florists to grow for market or for cut flowers. Our collection embraces over 200 sorts of the best chrysanthemums in commerce. None surpasses it for usefulness, coming in bloom just in time for All Souls Day. \$3.00 per 100.

50,000 TEA and 10,000 HYBRID ROSES grown in 2-inch pots now ready, in all leading sorts. **CHINESE YAM** (*Discorea Batata*). Seed Tubers, \$3.00 per 100; 500 for \$10.00.

We carry the largest and most varied stock to the Southwest. Three acres under glass. Parties in need of stock will please send lists to be priced.

Satisfaction guaranteed. Wholesale and Descriptive Catalogues FREE.

JOHN TRINE GREENHOUSE CO.,
BAY CITY, MICH.

Piping for Steam.

Will some of your readers be good enough to describe the best way to "pipe," for steam heating, a greenhouse 100 feet long, that grades a few inches less than 3 feet (about 2 feet 8 inches) to the 100 feet? The boiler will be at the lower end of the greenhouse. E.

COST OF BUILDING.—Subscriber, Boston, Mass., can secure estimates on the cost of building from any of the horticultural builders who advertise in the FLORIST.

THE GURNEY HOT WATER HEATER Co. send us their calendar for 1889. It is handsomely gotten up, and we have no doubt they will be glad to mail one to any florist. Their address is 237 Franklin street, Boston, Mass.

COST OF HEATING.—In reply to Enquirer's query, I am heating over 24 000 cubic feet with water at a cost not to exceed \$15 for the whole winter. If he or others desire particulars shall be pleased to give them. H. M. HOFFMAN.
Leavenworth, Kan.

AMERICAN POMOLOGICAL SOCIETY.—The 22nd biennial session of this society opens at Ocala, Fla., on the 20th inst. and continues to the 22nd. A programme has been prepared which can not fail to be of very great interest to all nurserymen and fruit growers. Reduced rates have been obtained on all railroads.

STEAM HEATING.—The Herendeen Manufacturing Co., Geneva, N. Y. makers of the Furman steam heater sends us a pamphlet containing a portion of Mr. J. D. Reynolds paper on heating read at the last convention of the S. A. F., and numerous extracts from communications which have appeared in the FLORIST on steam heating, which they are mailing free to those in the trade in connection with an advertisement of their boiler.

PALMS.—Your correspondent "Gardener," in treating the palms referred to on page 107, will find it best to remove as much as possible of the old soil, filling up the tubs with fresh compost, but if the plants are so pot bound and there is such a mass of roots that this is not practicable, then a dressing of sphagnum will be the next best thing. In either case they should be abundantly supplied with strong liquid cow manure, and if liberally fed they will grow and flourish for many moons in very cramped quarters. On the whole the brother has no special cause for uneasiness; it is always desirable to get a good specimen, in as small a pot or tub as possible. Palms don't require to be shifted very often, and the longer "Gardener" can keep his in condition without repotting the better.

Baltimore.

Walesville, Oneida Co., N. Y.

Indianapolis.

The third annual meeting of the Society of Indiana Florists will be held at the State House this city Feb. 21 and 22. Programmes may be had from Wm. G. Bertermann, secretary, this city.

Trade has not been very satisfactory this season. While there are the usual number of society events the decorations have usually been on a cheap scale. One exception was the Commercial Travelers Association's ball and banquet. At the latter tables were set for 1,000 people. Wiegand decorated the tables and Bertermann Bros. the hall.

Wm. Langstaff, president of the local club, is now representative from this county in the state legislature.

Miss Christine, oldest daughter of Mr. Fred Dorner, Lafayette, Ind., died Jan. 29. Miss Dorner was a very bright, intelligent young lady and of very great assistance to her father in his business as well as an affectionate daughter. She always took an active part in the exhibitions of the Society of Indiana Florists, and at future ones her work will be sadly missed. A committee of three members of the society attended the funeral bearing a suitable floral tribute. Flowers were also sent by other Indianapolis florists.

The trade at Christmas was larger than last year, but that for New Year's was smaller. The high prices of roses was a drawback. Quality of flowers was somewhat better than last year; carnations and violets were fine and plentiful. Prices obtained were about equal to last year, in some instances less. There was a sufficient supply of everything except roses.

CHRYSANTHEMUMS.

Six of the Finest Novelties ever introduced, viz:

WM. H. LINCOLN, NEESIMA,
MRS. FOTTLER, KIOTO,
BELLE HICKEY, LILIAN B. BIRD,

Strong plants, \$1.00 each, or the collection of six for \$5.00. Orders filled in rotation after February 1st.

The above are from the famous collection which came to us from Japan in Spring of 1887, a present to a Boston lady, who placed them at our disposal. In this collection was the noted variety named for this lady, "MRS. ALPHEUS HARDY," for the stock of which we received last Spring \$1,500.

H. CANNELL & SONS' CATALOGUES.

Our Floral Guide contains all the new and valuable novelties in Europe, and an immense amount of valuable information; it is the largest, and totally different to any other catalogue. Our plants are so good (and our well-known packing) that we get them out alive all over the world. Messrs. Peter and John Henderson, Thorpe, Dreer, Atlee Burpee, etc., are our personal friends and visitors when in England—sent free for 15 cents.

FOR CUT FLOWERS. Our Begonia "OCTAVIE" which rivals the Camellia and Gardenia, and received almost as many certificates as all other Begonias put together, would be of immense value to the American trade. Tubers 10s. 6d each.

MR. MYRON A. HUNT, Florist, Terre Haute, Ind., U. S. A., April 2nd, 1888.

The Begonias are at hand, in the best of order. Allow me to thank you for the very prompt attention to my cablegram.

MR. W. TRICKER, gardener, Judge Benedict, New Dorp, L. I., New York, U. S. A., Jan. 12, 1888.

The box of plants arrived in good condition, notwithstanding twelve days' delay in Customs—thanks to your excellent packing.

Building.

Will you kindly inform me of the best way of erecting a house for raising tomatoes and other early vegetables for market? I am thinking of erecting a house 16 feet wide by about 80 to 85 feet long and would like to know if it is best to set it facing north and south or east and west, also how high to build walls before starting in with glass, then how high glass sides should be to where roof begins and then what slope to give my roof and whether you would advise using brick or stone for walls. I have noticed several inquiries of this kind in your paper therefore put these questions.

Natrona, Pa. P. S. BRACKENRIDGE.

[We believe that nearly all forcing houses, whether for flowers or vegetables are now three-quarter span facing south. On a three-quarter span house the front wall is usually from four to five feet and the back wall from six to eight feet high. In commercial houses glass is rarely used in the side walls. Slope of roof should be about 45 degrees, sharper rather than the reverse. Both brick and stone are good for walls, which had best be hollow. Use which ever material is most convenient and cheapest. Everything else being equal use stone.]

C. RIBSAM & SONS,
TRENTON, N. J.

Every kind of hardy Fruit and Ornamental Tree or Plant (new or old, true to name and strictly first class), at half the price of most traveling agents and other nurseries.

Lovett's Guide to Horticulture tells about them (defects and merits, prices, planting, culture, pruning, &c). It is a handsome book of nearly 100 pages, finely printed, over 200 engravings. Mailed, with colored plates, 10c.; without plates free.

Headquarters for Wonderful Peach (far superior in beauty and merit to all other late yellow kinds); Gandy Strawberry, bears the season planted, very large and excellent and the latest of all; Monmouth, the earliest large strawberry; the two remarkable plums (Abundance and Spaulding), Carlough Apple, Lawson Pear, Meech's Quince, etc. All fully illustrated and described in the Guide. 200,000 Peach Trees, Apple, Pear and other fruit trees; Strawberry, Blackberry, Raspberry, Grape Vines and other Small Fruits; Evergreen and Deciduous Ornamental Trees, Plants and Vines and Nut Bearing Trees in almost unlimited numbers and great variety.

Plants by mail to all points of the Continent a specialty.

Mention this paper and a copy of *Orchard and Garden* will be sent free.

Rochester, New York.

Freight Rates on Pots.

The new western freight classification which took effect January 10 on all railroads west of Chicago, changed florists' flower pots (earthen ware) in crates from fourth class to second class, same as crockery. This has nearly doubled the freight charges west of Chicago. Southern points remain as before. Texas and Pacific Coast points are still fourth class and only slightly advanced in rate. Rates east of Chicago and St. Louis, including most of Illinois, are same as last year. This brief statement will answer hundreds who ask why they have been obliged for last month to pay such advanced freight charges at places west of Chicago.

J. NEAL PERKINS.
Syracuse, N. Y., Feb. 10, 1889.

THE LITTLE CLIMAX SPRAY PUMP

HANDSOME,
USEFUL,
DURABLE.

ITS EQUAL has not been invented for spraying delicate plants and for using insecticides in greenhouses to destroy MILDW, RED SPIDER, ETC., or for spraying Flowers and Shrubs on the Lawn. It throws a Fine Spray 15 feet and a Solid Stream 40 feet; a perfect Pump for washing Windows, Porches, Carriages, etc. Only weighs 21 pounds; legs are unscrewed and it is packed in a neat, strong box for shipping.

FURNISHED COMPLETE FOR \$12.00.
Liberal discount to the trade. Write for large illustrated price list of Spraying Machines and Insect Poison. ADDRESS

"ACME WATER HEATERS."

The most efficient and economical apparatus on the market for heating by Hot Water. Florists will do well to study up the system of Hot Water Heating, and thus enable them to select their Boilers by practical knowledge. We claim the largest heating surface exposed to the fire and the greatest results from the least fuel. The Acme will heat more 4-inch pipe than any other Boiler made of the same size grate. We offer the means to economize in your most expensive department.

THIRTY-TWO PAGES this issue.

Spring Trade Price Lists.

In our supplement to this issue will be found a number of spring wholesale lists in a form very convenient for buyers. We hope to make this feature of the paper so valuable to both buyer and seller that the principal ones in the latter class will find it to their advantage to use the columns of the FLORIST in preference to printing and mailing lists themselves. We bespeak for those who have placed their lists in our first price list supplement a liberal share of your patronage. Our many friends in the trade who so continually wish the FLORIST success can materially assist by confining their dealings as far as possible to those who advertise in its columns.

New York Notes and Comments.

Isaac H. Young, senior partner in the firm of Young & Elliott, died suddenly at his home in Brooklyn on February 10, aged 63. Mr. Young has been identified with the seed trade for many years and was widely known in horticultural circles. He was for a number of years treasurer of the deceased New York Hort. Society, and was very highly esteemed in all his business relations. He was unmarried. He leaves a large property, chiefly in real estate. The firm will continue to bear its present name, one of the late Mr. Young's brothers being already a member of it.

Allium Neapolitanum is an old bulb now being forced very successfully. It is a beautiful pearly white and its clusters of bloom are very dainty; it can be had in by Christmas. It was introduced into cultivation in 1823, but seems little known here. It is grown in boxes like freesia; the bulbs are only the size of large peas, but it does not do to plant them too closely together. A. Hermetii grandiflorum is a larger sort, described as an improvement on A. Neapolitanum. A good many of the alliums are very ornamental, but they must be handled carefully, as any bruise is apt to bring out their characteristic odor. Scratch an allium and you'll find an onion.

Relative to the now popular genista, some of the growers are recollecting how a few years ago these plants were really unsalable, except in small quantities; more than one nurseryman has been obliged to devote most of his stock to the rubbish heap, to make room for better paying stuff. But at that time comparatively few plants were used in decoration, and the demand for cut flowers was chiefly devoted to roses and carnations. We can remember the time when cyclamens and aspidistras were thrown away; now there is quite a run on both. Moral: when you have a thoroughly good thing keep it; it will be salable in the future, even if it won't sell now.

Cypripedium flowers have been unusually plentiful of late; the market is apt to become overdone. A bad thing with orchids, because they can't be used for everything, and if they ever become cheap enough to be sold at the street stands they may become popular, but they certainly won't pay.

Some variegated aucubas seen at Weir & Sons, large, well grown plants, are used in decorations; they are fully as showy as crotons, and bear more handling without injury. The ordinary Aucuba Japonica makes a beautiful decorative plant, with its shiny green leaves and large red berries. A fine lot of these admirable shrubs was to be seen at George Such's South Amboy nurseries some fifteen years ago; well grown plants do not seem so plentiful now.

A handsome specimen of the Norfolk Island pine (Araucaria excelsa) was noted at Weir's; it would be a fine thing for decorating if it could be handled more freely. However, a good many people among the general public would not appreciate it at its full worth unless assured that it was more expensive than an everyday pine. Several of our hardier evergreens offer good material for plant decorations. Take, for example, the golden retinospora; well grown plants are not only shapely and symmetrical, but the color, bright gold with an under tint of green, shows up finely with darker plants. Occasionally we hear of these and other evergreen shrubs being used for decorating; the fact that they will bear knocking around adds to their value.

Mr. Falconer's remarks on Ipomoea pandurata will be corroborated by all who admire the beauty of this plant. It certainly does not need protection during the winter, for it used to be a very troublesome weed in some places about South Amboy. The fleshy roots penetrate to such a depth that it is almost impossible to extirpate it when once it gains hold in the soil. It is often seen growing in masses with Calystegia sepium, the hedge bindweed. The rose colored flowers of the last named make a charming combination with the white ipomoea. A good many of our native plants seem more appreciated abroad than here, like the pokeweed, here an undesired dweller in waste lands, while in England it forms a desirable addition to the subtropical garden, a distinction its stately habit entitles it to. It is to be hoped, however, that florists, as well as botanical amateurs, will discourage the destruction of beautiful native plants, many of which are becoming scarcer year by year. This is especially true of ferns; Adiantum pedatum and Lygodium palmatum, two of our most beautiful native varieties, are being destroyed by wholesale, and there is no doubt that the scarce walking fern (Camptosorus rhizophyllus) has been rendered still scarcer through the same cause.

A new edition of "Henderson's Hand Book of Plants" is now being prepared, in which the cumbersome Linnæan system of classification is discarded, the natural system only being retained. Mr. W. J. Davidson is Mr. Henderson's aid in this work.

EMILY LOUISE TAPLIN.

California Notes.

Mr. John Henderson, of Flushing, L. I., is spending the winter at East Pasadena, Cal., and through the kindness of Mr. Chas. Anderson we are enabled to publish the following extract from a very interesting personal letter received by him from Mr. Henderson under date of December 26, '88.

"The hotel is situated at the top of a high hill and the grounds are beautifully laid out. Roses flourish better here than at any other place I have ever been. La France with flowers as large and full as Magna Charta; I never before saw any so fine. The Safranons are simply grand; how they would sell in New York. Perles are also fine and one I first called Isabella Sprunt was excellent, but the gardener called it Coquette de Lyon and I think it must be Etoile de Lyon. Roses are everywhere. There are forty tables in the dining-room and every one has a vase of roses and other flowers in the center. Roses are placed in every room and in the churches the altars are decorated with roses. Heliotropes as standards are fine, also Canna Ehemanni, brugmansias, calla lilies, Musa ensate in flower, Asparagus plumosus, smilax, dracenas, palms, abutilons of all colors, poinsettias, pampas grass, Paris daisies, Passiflora princeps, beds of gold and silver leaved geraniums bordered with dwarf ageratums. In fact every flower that we have in July and August.

"Among the trees and shrubs are the eucalyptus which becomes quite a tree here with trunks thicker round than I can span and 50 to 100 feet high—in fact it is the tree of the country; the pepper tree, drooping like a willow, leaves like a mimosa covered with bunches of a small red berry which when bruised gives out a strong aromatic smell, the only trouble with this tree is that it makes its roots on the surface and the other day we had a heavy rain followed by a high wind and I think I saw some twenty blown down; all they do in this case is to cut off all the branches and set the tree upright again. All the Australian trees do well here; of acacias there are immense bushes of all varieties, some are just flowering, but in about a month's time it will be a glorious sight. Cassia corymbosa is now in full flower and fine it is. Grevillea robusta is 20 to 30 feet high; Araucaria excelsa 50 feet; the variegated New Zealand flax in immense bunches with leaves six feet long.

"The proprietors of the hotel here bought the collection of camellias of the late Mr. Hovey, of Boston, they are generally from 8 to 10 feet high, are commencing to flower and in another fortnight will be in full flower."

Chicago.

The Chicago Florist Club's reception and ball occurred the afternoon and evening of February 12 at the First Regiment Armory. In spite of the present scarcity of flowers an excellent showing was made. The hall is the same that the Chicago convention of the Society of American Florists was held in.

The balconies which run the entire length of the hall on each side were profusely draped with laurel and immense quantities of cedar and arbor vitæ wreathing hung in festoons overhead.

Along the walls below the balconies were placed sixteen huge panels six feet square of holly, one in each space between the windows. On each of these panels was placed a loosely arranged pocket of flowers, each one different. These pockets were filled as follows: white camellias, hybrid roses and lily of the valley, Tournesol tulips, Bon Silene roses and lily of the valley, Am. Beauty roses, callas and red camellias, Bennett roses, Bride and Bennett roses, long stemmed red carnations, callas and red camellias, Bride roses and violets, Bon Silene roses and Harrisii lilies, Am.

Beauty roses and lily of the valley, violets and lily of the valley, red camellias and Harrisii lilies, La France roses and white tulips. Each of the window seats between these panels were banked with loose flowers and blooming plants. A very effective one was a flat of blooming lily of the valley in the center and scarlet tulips at each side. The other combinations were all different and too varied to describe.

Below the musicians balcony, which is over the main entrance, was a solid draping of smilax caught back clear to the wall. This was studded with red carnations and created a very graceful and pleasing effect. On the face of this balcony, which was also heavily draped with laurel and cedar, was placed in the center a huge shield of red carnations with a sash of calla lilies diagonally across its face, and on each side of this a large star of the same carnations dotted with callas. At each side of the entrance stood a large vase of tulips while a circular bank of plants stood directly in front and was the first thing to meet the eye.

High up on the wall at the opposite end of the hall was the name of the club in 14-inch letters of scarlet immortelles and on each side of a cabinet which occupied the center were handsome panels of roses; in front of the cabinet was a group of foliage plants and at a little distance on each side a large specimen palm stood guard. On a table in front of the central group of plants was a large plateau of tulips in blocks of varied colors. From the central chandelier was suspended a ball of red tulips some four feet in diameter, and from two other chandeliers on each side of this were hung smaller balls of red carnations and calla lilies.

For the afternoon reception which was for the purpose of giving an early view of the decorations, eight tables were placed through the center of the hall, each bearing numerous vases of loose flowers. On one of these tables was a large bowl of magnificent Mermet roses, undoubtedly the finest that were ever seen in this city. They were simply grand, every flower a specimen to be proud of; they were grown by George Klehm. There were many other handsome vases of Beauties, hybrids, La France, Brides, Bennetts and other roses in addition to Harrisii lilies, freesias, tulips, etc., and three handsome plateaus, one of daffodils and violets, another of carnations, half white and half red, and the third one-third each of Harrisii lilies, scarlet tulips and yellow calendulas. One table was a bed of moss in the center of which stood a blooming plant of the Jacq. rose, while on the moss orchid blooms reclined, with a plant of Lycaste Skinnerii bearing six blooms in a prominent position.

A handsome vase of cut orchids containing flowers of over a dozen varieties occupied a prominent position in front of a group of tropical plants and attracted much attention. There was also a plant of Dendrobium Ainsworthii bearing three superb spikes of bloom. All of the orchids were kindly contributed by Mr. Wm. H. Chadwick, who has undoubtedly the finest private collection of orchids in this city.

Two vases of the new pink carnation Tidal Wave were very effective and caught the eye of carnation growers and flower lovers alike. It certainly is a very handsome flower and its color, form and fragrance make it very salable. They were sent by the growers, Messrs. W. P. Simmons & Co., Geneva, O.

At night for the ball these tables were

moved to the sides of the hall to make room for the dancers. The toilets of many of the ladies were decidedly elaborate and quite a number of the club members were sporting full evening dress.

The daily papers all gave lengthy descriptions of the decorations, and the prime object of the affair was thus accomplished, that is to bring the matter of floral decorations prominently before society people and to show them what can be done in this line when a little money is used.

A number of florists from other cities were present including Messrs. H. L. Sunderbruch, Cincinnati, Chas. E. Hay, Springfield, Ill., F. J. King, Ottawa, Ill., and Ed. Jansen, the basket manufacturer of New York.

Boston.

At the meeting of the Massachusetts Hort. Society on Saturday, February 9, an essay on "Forestry as applied to Massachusetts," was read before the society by J. B. Harrison, secretary of the American Forestry Congress. Mr. Harrison is an entertaining and forcible speaker and understands his subject thoroughly. It was one of the most enjoyable essays of the course. One can not listen to Mr. Harrison without being deeply interested.

An adjourned meeting of the society was held on Saturday, February 16, to listen to the report of the committee on the future disposition of Horticultural Hall. The committee reported a plan for restoring the building practically to the original form and to continue the use of it for the society's exhibitions and other entertainments as heretofore. Among the improvements contemplated are enlarged space for the library, a large elevator for hoisting plants, additional dressing-rooms and fireproof partitions. The estimated cost of the improvements is \$12,000. The society also voted to procure duplicate copies of the paintings which were destroyed by the fire.

After this matter was disposed of a paper was read by Jackson Dawson on "Shrubs that are perfectly hardy." As is well known Mr. Dawson is at home on this subject. In the course of his remarks he alluded to the nursery catalogues which are circulated so extensively throughout the country and regretted that some of the money expended in getting up these catalogues had not been devoted to giving more reliable and explicit information regarding the hardiness and adaptability of the various trees and shrubs to different locations. People laying out new places are apt to be misled by the descriptions of many things and much time is lost and money expended in planting unsuitable varieties. He made an earnest plea for correct and unexaggerated catalogue engravings.

The Gardeners' and Florists' Club held a special meeting on Tuesday, February 19, to take action on the report of a committee on revision of the constitution and by-laws. The proposition to form a sort of employment bureau for gardeners and florists was favorably acted upon. A scheme for death benefit assessments was voted down by a very decided majority.

NOTES.

Peter Ball says "American Beauty is blooming every day and will produce more money to a given space than any other hybrid rose under cultivation."

"Take your hat off when you look at that!" So says Mr. Wm. Robinson, gar-

CONSERVATORY DECORATION

dener to F. L. Ames, as he shows the visitor some special gem in his orchid collection. Mr. Robinson can not complain of lack of company, for recently there have been several pilgrimages to his establishment. It never looked so well, and is to-day probably the healthiest and most interesting collection of orchids in America. Mr. Robinson is an orchid enthusiast of the most pronounced type and will worship an extra spot or wrinkle on a cattleya with a veneration which would put to shame the most devout follower of Brahma.

"Jim the Penman," the "florists' friend," is here. But he is letting the florists alone at present. He is introducing a book for yachtsmen. But he says he longs for the old days of the "Dictionary of Gardening," and the genial florist friends who were all ready to meet him half way. W. J. S.

Greenhouse Embellishment.

Apropos of the excellent remarks on conservatory decoration (page 231), the late Donald Grant remarked to the writer on several occasions that well kept commercial places were invariably conducted by men who had formerly been private gardeners. But I have certainly seen some very ill-kept places presided over by men who had spent the greater part of their lives as private gardeners, while on the other hand some of the most

orderly and best appointed places I have ever been through belonged to men who had never worked an hour on a private place. Private establishments are doubtless good schools in which to acquire habits of neatness and order that will generally stick to us even amid the hurly-burly of commercial life, but while proper training is an important factor in establishing such habits, considerable depends on a man's natural tendencies, and from what the writer has seen of people and things he feels quite satisfied that there are florists—as there are men in all other vocations—to whom tidiness is an utter impossibility, but they are the exception, and so far as the florist business is concerned the exception is becoming more marked every year. Orderly, neat and well appointed commercial places are more generally met with and although some of us, owing to limited capacity, can't well spare room for a regular show house, we can do our best with the room and stock at our disposal to make our houses as attractive as possible. The appearance of a common every day bench of coleus or geraniums may be vastly improved by a little care and taste in arranging the varieties and a few plants of other species, ferns, begonias, dracaenas, etc., dotted about the benches will impart an air of embellishment to the plainest greenhouse. The florist who does not find genuine recreation and enjoyment in devoting an occa-

sional leisure hour to giving a decorative touch here and there about his domain, to whom clean, orderly and attractive houses are not a source of infinite pleasure and personal gratification is lacking in ability to properly appreciate and enjoy one of the most fascinating occupations in the world. A. W. M.

Baltimore.

Conservatory Decoration.

The illustration (reproduced from *Moller's Deutsche Garten Zeitung*), shows an arrangement of plants on pieces of cork in the form usually followed in rock work, and shows what a pleasing picture can be made with but a limited number of plants if arranged to show each individual to advantage. A careful study of the arrangement illustrated will not be time wasted by any of our readers.

Proposed Import Duty on Plants.

The FLORIST is in receipt of advice that an association of nurserymen has recently, through a memorial petitioned Congress requesting that a duty of 30 per cent be placed upon all plants imported into the United States. These are now free as is well known to our readers. The question of tariff or free trade is so large a one and has in the past year been such a direct political question that at present we do not choose to discuss it in our columns.

Bulbs, as is also generally known, pay at present 20 per cent, the duty having been reduced 10 per cent some three years ago. It may not be generally known that lily of the valley and spirea are always imported as plants paying no duty.

Such of our readers as feel opposed to the proposed duty of 30 per cent on plants should at once write their congressmen plainly their views on the subject and reasons therefor. It was only through active efforts of this kind that the postage on seeds was reduced and our readers may well profit by the results in that direction if they are anxious that plants remain on the free list.

We may say that we can not see any sense in imposing a duty on any plants or bulbs which are not and can not be successfully grown in the United States.

Carnations and Soils.

There seems to be considerable difference of opinion as to the proper soil for Hinze's White carnation.

Here in Corfu there are perhaps 8,000 or 10,000 Hinze's grown annually for cut blooms and all are doing finely; I doubt if any excel us in size of flower. There are three different firms here growing this carnation, one on a light sandy soil, another in a rather heavy soil, the third (myself) in a medium soil—neither real light nor real heavy—and I can see no particular difference in the plants. I recently cut one bloom that measured 3½ inches in diameter.

We all grow them in three-quarter span houses running east and west (regular rose houses) with plenty of heat (from 48° to 54° at night), give all the air possible and syringe on sunny days. I give them plenty of liquid manure, growing in from four to six inches of soil on raised beds in all cases. I think that success depends more upon the heat, ventilation and general care than the soil. In Mr. Hartwig's case I think that perhaps when he moved to his new place he secured better stock plants or came nearer giving them the proper treatment than he had before. Of course carnations in a heavy clay soil require different treatment from those planted in a light sandy soil. Methods which bring success on one soil may result in failure on another. I think that any good soil will do if the treatment is adapted to it.

Portia with me is very free, always blooming well, and with long stems.

Buttercup is another fine sort; the cuttings should be rooted early in the season to do well and to bloom well the following season as the young plants grow very slowly at best, and as the buds do not blight when the plants are lifted from the field it is an advantage to have plenty of buds on them at that time. They will commence to bloom at once after being planted on benches and grow rapidly from that time on. Last year, from a little patch of 300 plants I cut 400 flowers at Christmas and 250 at New Year's which brought me \$4 a hundred, plainly showing that this variety is a free instead of a shy bloomer as I have heard some state.

Would like to hear from others con-

cerning Buttercup, Hinze's White and some of the newer sorts.

Corfu, N. Y.

E. M. GIDDINGS.

Carnations.

Two years ago I grew my carnations on such soil as Mr. Hartwig describes, a sandy, black muck, the result being a nearly total loss of stock, many of the plants died in the field and most of those placed in the benches died before spring. I attributed this to excessive wetness of soil due to an unusual amount of rain.

Last summer I grew some DeGraws for flowers in similar soil; they were a failure, while others grown in higher and dryer soil did well. I grew about a thousand seedlings on a slope running down into this low land, the improvement in size and vigor of plants as the higher land was approached was very marked. As far as my experience goes no carnations will do well in a retentive soil.

We can do nothing in this locality with Hinze's White or Buttercup, but the Century, which originated when the Buttercup did, does very well. The Anna Webb seems to do equally well on light or heavy soil.

This season I tried well composted night-soil in my benches, with a light dressing of Bowker's garden fertilizer, there was already some bone in the soil. The result was peculiar, my own seedlings grew with great vigor for a while and then stopped, the older standard varieties grew but very little, they are just starting up now. All alike look healthy and vigorous, but they don't grow. Whether I put in too much manure or committed some other error I can not say. I have never heard that there was any objection to the use of night-soil.

I find that seedlings are more vigorous than the older varieties, probably because they are seedlings and have not been exhausted by forcing.

L. WIGHT.

Framingham, Mass.

About Carnations.

I must certainly agree with Mr. Whittle in regard to soils for carnations; what will do in one locality will not do in another. Here we have a coarse sandy soil with a very coarse gravelly bottom; we can grow Portia, Buttercup, Century and Peerless, but Grace Wilder and Lyon's White are worthless. Of Hinze's White we have only 25 plants, so can not speak of them at present.

What light pink carnation can we grow in place of Grace Wilder? It is such a desirable shade we can not do without it. Our Peerless, Sunrise and Chester Pride this year are badly diseased.

What is the matter with the Edna Craig chrysanthemum? All the stock in this section was diseased so as to be useless. Are chrysanthemums going to be troubled by disease too?

A. B.

Primula Obconica.

If your correspondent, "C. W. Lewis," (page 259), can grow the common Chinese primula to his own entire satisfaction, he should have no trouble in growing *P. obconica*. The same soil, temperature and location that will grow the former will suit the latter exactly. I have never had an opportunity to test the effect of tobacco smoke on *P. obconica* because I always labor to keep them free from fly without subjecting them to smoke. Tobacco stems are kept about the pots and

are generally effective. I have at times syringed the plants with pretty strong tobacco water without, however, injuring them in the least. Plants will begin to bloom generally when a year old and they ought to be in prime condition when two and three years old. The most satisfactory plants are obtained from seed and if we can save our own seed and sow it as soon as it is ripe so much the better.

Baltimore.

A. W. M.

Primula Obconica.

In *FLORIST* of January 15 I noticed an inquiry by C. W. Lewis as to best manner of growing *Primula obconica*. Having been quite successful in growing it and as no one has answered the query I propose herewith to give my method of treating it.

Seeds were sown at intervals from fall to early spring and shifted on to 4, 5 and 7-inch pots which by the following December and all through winter were in full bloom, some of them putting up seventy-five or more flowering stems at one time. One 4-inch pot I noticed with sixteen stems in bloom and thirteen more at the same time in bud.

I used the top soil from old hotbeds with some of the manure of the bed mixed in and also added to it about one third part sandy soil from the field. Night temperature averaged about 55° bearing shade well and taking an abundance of water; I think they do a little better for a slight shading. I have never seen any insects on them. They received a light smoking of tobacco generally twice a week, but have never noticed any injury from it either on leaf or flower.

This primula certainly makes a grand plant, blooming nearly all the year round and the flowers keep well after being cut.

Marion, Ia.

I. N. KRAMER.

Verbena Rust.

Very general are the complaints at the present time against this "enemy" of the verberna and many are the artifices which are brought to bear against it, but all with the same result and why? For the simple reason that while the majority are using every effort to eradicate and destroy they are unwittingly encouraging, or at least overlooking the real and obvious effect of a simple cause.

The simple rule of cause and effect is here as clear as daylight. The first question we ask ourselves is what is rust? It is applicable to either the effects of microscopical fungus or insect growth above or below the outer tissues of plant life, more especially of foliage, which in this case it attacks curling and deforming the leaves and stunting the whole plant till it gradually dies. In this case it is the result of minute insects. Both the above are the result of a sudden check, either by draught, too high or too low temperature, etc.

By observing one of the largest collections of verbenas in the "States" I have made the following summary, based on the above theory and combined with practice among other plants so affected:

Firstly, that the verberna is a soft wooded plant and therefore susceptible during the fall and winter months to the effects of temperature and liable to disease in the form of mildew or rust (though the former must not be confounded with the latter), and knowing this every effort should be made to equalize temperature and prevent check.

Secondly, the main fault lies in the following: The house in which the ver-

KALANCHOE CARNEA. FLOWERS ROSY-LILAC. TWENTY INCHES HIGH

[SEE NOTE, PAGE 330.]

[REPRODUCED FROM GARDENERS' CHRONICLE]

benas are grown is kept at a temperature of 70° to 80°, they are then watered daily with water from a hose which is almost at freezing point; now this is utterly contrary to the laws of nature and what is the result? First, a check which is inevitable under such conditions and then follows rust, which is again followed by the usual doctoring which tends only to aggravate and make things worse.

Thirdly, that the secret of prevention (not cure) resolves itself into this simple treatment, let the stock be propagated from non-rusted plants and grown on in the usual way, but watered with water the same temperature as the house and there will be no more rust to contend with, except that which may have been inherited and this they will outgrow if a little stimulant (very weak) is used in the shape of a little pure guano.

I should further advise the plants to be placed on dry slates and not on "sand," which in time becomes sodden and produces a cold "bottom."

Jersey City, N. J. H. A. BUNYARD.

Verbena Rust, Without a Microscope.

If it is a positive fact that verbenas rust originates direct from an insect on healthy plants, and that no known insecticides destroy them, I can not realize why plants so affected often throw out healthy shoots as spring approaches and form good plants. This is a fact many

can testify to. Some years ago complaining to one of our oldest florists that my verbenas rusted so he said: "They will grow out of it in the spring." However, I would not encourage the retaining of rusty verbenas, they are not worth the room. But could this occur, when an indestructible insect so contagious as to affect healthy plants wherever it is carried to, is at bottom cause?

Last fall I took cuttings from outdoor plants of Mammoth and two weeks later again from same plants. They all rooted well and were treated alike. After they were replanted the first batch rusted badly and were finally cast out. The second grew healthy from the start and are to-day as vigorous as some of my seedling stock. Again, all my verbenas were planted side by side on benches, and while this rusted stock shriveled up others grew right on and have never shown any sign of rust. These are facts that the sun shines on; any one can witness them. It would please me to offer a preventive, even a remedy, but I am not experienced enough to understand the cause.

Most likely if propagators could have some interest beyond mere coin value, to exercise every care and study every means and methods to have healthy, vigorous stock of all varieties of plants to start with, and not force the young stock too much it would be a long step towards lessening the ills, diseases and

degeneracy too common with greenhouse plants.

DANIEL K. HERR.

Lancaster, Pa.

A Simple Method of Blooming Lilacs in Winter.

I was particularly desirous to have some lilacs in bloom as early as possible this season, but having no plants suitable for forcing at hand I decided to try some branches in water, a method of which I had heard and read a good deal. I happened to have several very old trees about the place that required thinning out and shaping up, so from a large tree of the white variety half a dozen branches were cut and placed in water on the pipes under a high stage; they were then syringed several times daily, and two weeks later were taken into the light, a place being arranged for them on the pipes in a convenient corner. These branches were cut December 9, '88, and January 19, '89, I cut the crop which amounted to about two dozen very pretty little bunches. The clusters were small, but they served my purpose, and I was so well satisfied that on January 19 I put in a good stock of both the white and purple varieties. These were placed at once in the light—otherwise they have been treated precisely as the first lot—and they are to-day, February 2, in splendid shape, many of the clusters now being six inches long. None of the branches are less than 1½ inches in diameter and I notice that the larger the stems the better are the results.

Baltimore, Feb. 2.

A. W. M.

Landscape Gardening.

A correspondent asks for hints in regard to the special preparation which should be made by one intending to become a landscape gardener.

It is a most difficult profession and demands the broadest culture in addition to varied technical acquirements. The number who have succeeded in becoming eminent is very small, so small in fact that we may say with truth that the landscape gardener like the poet is born, not made.

A thorough technical education is of course necessary, and a college education would be a great advantage, for much of the best landscape work is in behalf of educated and refined people and every professional man should be able to meet his clients upon equal terms.

As to the technical knowledge required. Some knowledge of architecture is absolutely necessary, this can best be acquired in an architect's office, where drawing and construction can also be learned with so much of the theory of landscape gardening as can be gleaned from books. In the making of new places the architect often consults the landscape gardener, who should possess a critical knowledge of the different styles and be able at need to design the architectural accessories of landscapes, such as terraces, bridges and so on. Enough civil engineering is required to manage the construction of drains, roads, bridges and embankments.

A thorough knowledge of the flora of the country is essential, the personal characteristics of every tree and shrub, their habits of growth and culture, their relative color value and their general effect in leaf and out of leaf. All this knowledge will avail but little, unless the artistic sense is cultivated to the highest degree, for landscape gardening is high art, and its professors must be artists.

This profession offers a fine career to

an ambitious young man who has confidence in his own ability and is willing to devote the years necessary to that thorough preparation which is essential to success in the liberal professions.

L. W.

Notes on New French Roses.

Dr. Reymont (Hybrid Polyantha):—Habit of plant robust, shoots thorny resembling in growth the hybrid teas as also in its freedom of bloom; flowers medium to large produced singly on each shoot; color rich velvety crimson; remains a long time in bloom without fading; quite double and very fragrant. This is one of the most promising varieties sent out for several years.

Marie Pavie (Polyantha):—This variety in habit of growth and color of flowers is something on the style of the polyantha rose Mlle. Cecile Brunner; flowers blush white, quite double and fragrant.

Esmeralda (Hybrid Tea):—Habit of plant vigorous; flowers large not very double; color rosy lilac.

Joseph Metral (Tea):—Plant very vigorous, producing large deep green foliage; flower full to large, very double, often produced in clusters, color deep violet purple, promising as a bedding rose.

Mme. Alegatiere (Hybrid Polyantha):—Habit of plant robust, shoots very thorny; flowers medium, form irregular, color clear rose, fragrant and a very free bloomer; seems to have lost nearly all its polyantha habit and looks more like a hybrid tea.

Mme. Pierre Guillot (Tea):—Plant a vigorous grower, flowers large and double, color rich orange yellow heavily shaded with rosy lilac, probably an improvement on Mme. Angele Jacquier, which it somewhat resembles.

Mme. Magonette (Tea):—Plant a free healthy grower; flowers medium to large, color clear salmon rose heavily edged with rosy lilac, base of petals deep yellow; a free bloomer and promising variety.

Comtesse Julia Hungady (Tea):—Habit of plant vigorous with fine foliage; flowers large, moderately full, color salmon yellow heavily margined with deep rose; a free bloomer producing its flowers singly, fine in bud; this variety seems as changeable in the color of its bloom as Mme. de Watteville, consequently it is difficult to describe; I believe this will be a promising variety for forcing as it is rather a new shade in color.

Comte Henri Rignon (H. Tea):—This variety seems to be a moderate grower with fine healthy foliage; flowers large, moderately full, color soft flesh with a decided shade of yellow; a free bloomer something on the order of Lady Mary Fitzwilliam, only the color is much finer.

Ernest Metz (Tea):—This is a vigorous grower with large solid foliage; flowers very large and double produced on long thick stems, color clear carmine rose, some of the petals striped; the blooms are of great substance and this is a very effective variety. ANTOINE WINTZER.

West Grove, Pa.

NOTE.—Since noting these varieties I

have had several more blooms on one of the roses previously described by me namely: Mme. Pierre Guillot, which are so much finer than the first blooms that my description of this variety does not do this beautiful rose justice. It is at this writing showing some of the most beautifully colored roses I have ever seen; it is far superior to Mme. Angele Jacquier, to which I compared it in my description. A. W.

New Rose Souvenir de Wootton.

Some two dozen blooms of this new rose sent us by Messrs. C. Strauss & Co., Washington, D C., were a most agreeable surprise. Judging from these blooms this American seedling is a great advance in the most desirable direction. It is stated to be a seedling from Bon Sileue fertilized by Louis Van Houtte.

The buds sent us stood the shipment well and arrived in first class condition. In color they are deeper than Bon Sileue and much larger and more double than that variety, and with a strong spicy fragrance. In the bud state they much resemble a very large well colored Bon Sileue, but when open the resemblance ceases, for then they have more the shape and appearance of American Beauty, owing to the doubleness of the flowers, which are borne on strong straight stems with handsome foliage.

If such flowers as those sent us can be produced easily and in quantity we have no hesitation in saying that this rose will prove an unusually valuable addition to our list of cut flower roses, for its fine color, erect bearing, long stems, good size, doubleness, and above all its strong fragrance will certainly make it a great favorite with flower lovers and flower buyers.

The rose originated with Mr. John Cook, Baltimore, and was named by him in honor of the occasion upon which Mr. Geo. W. Childs entertained the Society of American Florists at Wootton at the time of the Philadelphia convention.

Rose Vick's Caprice.

Three blooms of this rose have been received from Mr. Vick. They are of about the size and shape of *Hermosa*, of a dull scarlet splashed with white. The colored lithograph on his letter head gives a good idea of the marking, but the color of the blooms sent us was decidedly washy and not nearly as bright as that in the lithograph.

Orchids and Tobacco Smoke.

Will you please inform me through your valuable paper whether tobacco smoke is injurious to orchids such as *lælias*, *oncidiums*, *odontoglossums*, *phalaenopsis*, etc. A. H. LANGE.

Worcester, Mass.

Tobacco smoke does injure the leaves of many orchids, more particularly the "cool" ones comprising nearly all the *odontoglossums*, the thin leaved *oncidiums*, the *lycastes*, many of the *cælogynes* more particularly *occellata*, *pandurata*, *Massangeana* and *media*, and in a less degree the commoner species. The majority of the *calanthes* both deciduous and evergreen may be injured, also the thin leaved *phaius* and many *dendrobiums*. Among those genera which may be fumigated with comparative freedom are *phalaenopsis*, *lælia*, *cattleya*, *cypripedium*, *vanda* and *ærides*, and generally those species that have thick leathery leaves. I do not like to fumigate orchids

at all and never resort to it except when all other means fail. Our *odontoglossum* and cool houses have not been smoked for many years. We found an equally effectual and more harmless substitute in steaming the hot pipes with strong tobacco water. This does no injury whatever and if practiced about twice a week will keep the house perfectly clean. In warm weather when this can not be done the hose liberally applied will soon clean the plants of aphids or thrips.

F. GOLDRING.

The Violet, Its Cultivation and Disease.

Since acquainting the secretary with the subject of this paper, an able article has appeared in the *AMERICAN FLORIST* from the pen of a Milwaukee grower which so fully covers the ground as to cultivation, and is also so in accord with my own experience, I will pass this division of the subject with only one or two suggestions.

In relation to soils most suitable, having tried several with varying results, am satisfied that a heavy loam is the best, by this I mean one which will not bake or crack though the admixture of sand be very slight. As to the method of growing, I do not believe that as far north as we are it is advisable to grow them in frames, either with or without fire heat, the uncertainty of the weather rendering it difficult to clean the plants properly, or gather the flowers with any degree of regularity. Give them bench room near the glass in a house by themselves, where the temperature can be kept under perfect control. I have found them to thrive best when kept about ten degrees above freezing at night, and on sunny days maintaining as low a temperature as possible without chilling the plants. The small grower who requires but a few each day for his own work, would in my opinion save money by buying of a brother florist who raises them in large quantity, or of some commission house rather than undertake to grow a few under sash or in a house with other plants.

Of the disease to which the violet is subject much has been written during the past year, but I have failed to see any cause assigned that was not disproved by the practice of other growers in different localities, methods which in the one case resulted in failure, in the other proved successful. So serious has this disease become that many large growers have entirely abandoned their cultivation, and it will be remembered Mr. Siebrecht, of New York, offered a reward of \$100 to any one who would solve the problem, and notwithstanding many writers have given their experience with the pest, as well as advanced theories and surmises as to its cause, I still have to learn that any of them have drawn on friend Siebrecht for the reward.

The true solution may be as far in the future as ever, but in a visit not long since to Mr. John Cook, of Baltimore, Md., he was able to show results, the fruit as he believes of careful thought, observation and experiment, which it seemed to me would be of interest to violet growers to know. It will be remembered that Mr. Cook was the originator of that charming variety, *Marie Louise*, which was first placed on the market in 1872, and he now has two new varieties, the rose colored *Mme. Millet*, offered last spring, and another a sport from *Swanley White* which he calls *Robt. Garret*, not yet disseminated. In color this resembles *Neapolitan*, but its

THE SHIRLEY POPPIES. [SEE NOTE, PAGE 330.]

promise of supremacy is in the great size of the flowers. The original stool as seen in January a year ago, literally bristled with buds while one fully expanded flower was one and one half inches in diameter by actual measurement. Mr. Cook grows about 120 sash of violets annually, and a varied experience of forty years in their care, coupled with the magnificent appearance of his plants at the time I saw them, would seem to show that whether his theory is correct or not his practice brings success.

He stated that the disease appeared with him about ten years ago, Marie Louise which he had then been cultivating about eight years, being so much affected as to become practically valueless. The plants of this so badly affected that season were grown on his lowest bottom land, the disease showing itself about August 1, previous to which the stools had been very large and fine. The following season, having some planted in frames for summer growth on his highest land, he noticed early in September that the stools under the sash rests, or bars of the frame, were clean and healthy, while those exposed to the full rays of the sun were badly affected with the disease. At first he thought this was the result of shade, observation

in another line tending to confirm him in this conclusion, and this was the pear blight. Among his fruit trees was a row of pears, west of which ran a row of large evergreens. Both rows were at such an angle as to cause a complete shade to cover the pears from 11 o'clock through the day. Every tree so shaded was free from blight, while trees at either end of the row in the full sunlight were much diseased; but to return to the violet. Careful and patient watching convinced him it was not the shade that prevented, but the dew that caused the mischief, and his theory is this: The same fever-producing agency—be it what it may—which will bring a strong man down when exposed for any length of time to the dews and miasmatic influences of the night air, is the producing agent of the disease in the violet. The drop of dew on the leaf exposed to an August sun evaporates, leaving whatever there may be of poison, in a concentrated form on the leaf. Acting on this theory he plants all his violets for summer growing in narrow beds, and as soon as there are any signs of dew covers them by stretching water proof fibre cloth on frames so prepared as to keep the cloth well above the plants, thus securing a circulation of air. This covering is carefully removed

in the morning, and the same process gone through with each day until they are housed in winter quarters.

Whatever may be thought of the theory as to the cause, the cure with him seems to be effectual, as plants grown near the others and given the same treatment in every way, save in the matter of night covering, are badly diseased. We are apt to look upon long continued, intelligent and successful methods as proofs of the system followed, and if any of our violet growers desire to test this method for themselves, and should it prove as effectual with others who have been troubled with the disease as with Mr. Cook, I have no doubt he could be prevailed upon to receive Mr. Siebrecht's check for \$100.

[Read before the Society of Indiana Florists February 22, by M. A. Hunt.]

Violets.

Mr. Valentine Burgevin, Kingston, N. Y., writes enumerating the many diverse opinions which have been expressed as to the mode of treating violets to attain the best success and expresses the hope that "if there is a certain way of growing violets to secure an abundance of flowers of good color and large size without failure," the possessor of the details would receive the gratitude of the whole trade by sending them to the *FLORIST* for publication.

While considerable has been written in regard to violet culture, there probably remains much to be said, but we are afraid we shall have to wait indefinitely for the "certain way" mentioned by our correspondent. There is no royal road to success in plant growing. While we can always learn from the work of others unless we have the ability to successfully change and adjust their methods to our probably different conditions we need not look for the best success. This fact has been frequently stated in these columns, but it will bear repetition.

Standard Pots.

The Whilldin Pottery Co., Philadelphia, send us a set of samples of the standard pots, from 1 1/4 to 12 inches in size. They conform in every particular to the standard adopted by the Society of American Florists at the New York convention, and we do not see how a better pot could be made. The measurements are all inside and shape exactly as shown in our supplement to the January 1 issue. They are also well made and a credit to the manufacturers. The breakage of such pots should certainly be very small.

The Whilldin Co. also send us a letter from Mr. Peter Henderson wherein he says: "If the Society of American Florists had never done anything else than adopt the standard pot, that alone, in my opinion, will (in the next five years) have paid to its members who will 'practice as they then preached' the whole cost of the organization. We have only used the standard pot made by you for six months, but that has been long enough to convince us of its great value, and of the mistake we have made in not using it before. No other pot but the standard shall be used by us."

In response to Iowa's request in last issue postal cards are coming in from those who intend to use only standard pots. Let all others who have decided to use standards only send in their names. We shall print the list in an early issue to show refractory potters that those in the trade know what they want and mean

business in this matter of uniform style and size of pot.

Some of the Flower Seed Novelties.

BY WM. FALCONER.

"I have got disgusted with novelties in general and have about concluded not to even offer one again that I have not tested myself unless it is very promising." This is what one of our chief seed growers and dealers writes me. Well, no matter how disgusted we are, we have got to buy them and try them in order to keep posted, if for nothing else; this is what I do year after year anyway. I don't care how glowing the description of a novelty may be I am never disappointed, no matter how poor it may turn out, one gets hardened after a time. But it is galling to pay a high price for a packet of seed and then need a microscope to detect the presence of the seed in the packet. Very few of the novelties apart from asters, pansies or sweet peas are adapted for florists' use as cut flowers but florists who are interested in the plant trade have got to grow all the hardy and tender perennials, and others interested in the seed business have got to grow these and the annuals as well to test them if for nothing else.

PRATIA ANGULATA is the proper name of the *Lobelia littoralis* which is catalogued among novelties. It is a slender stemmed, creeping perennial species from New Zealand and not at all hardy. But in its way it is a real pretty little plant with white lobelia-like flowers and purplish-red berry-like fruit and useful for small baskets and brackets. It has been in obscure cultivation for a good many years and is now, as it were, resurrected.

PAPAVER LÆVIGATUM is a new annual poppy from Persia. It grows "2 to 2½ feet high, forms a tuft of deeply pinnatifid foliage and bears in rich profusion flowers four inches across, with petals of a brilliant deep scarlet with a black spot at the base of each petal, margined with white on its upper half. * * The flowers remain on the plant for several days." But I can not find out much about it. But the packet contains a good many seeds.

BEGONIA SCHARFFIANA is a new species from Brazil, and is said to have white flowers and large thick velvety leaves, green above, purple beneath. But you can hardly see the seed in the packet it is so scarce.

YELLOW CARNATION GERMANIA.—We are offered a packet of eight seeds for 1s 6d or 40c.-50c., and E. G. Hill offers us plants for 20c. As varieties of carnations are not apt to be very strict in reproducing their kind from seed, I am inclined to look upon the plant as the better bargain.

KALANCHOE CARNEA is a new and beautiful winter blooming species introduced a few years ago by Veitch of London. They exhibited cut flowers of it for the first time at the meeting of the Royal Hort. Society, London, January 11, 1887, when a first class certificate was awarded to it. A few weeks after that it was figured and described in the *Gardeners' Chronicle*. The plant is succulent throughout, not unlike the *kalosanthes* we used to grow, of bushy habit and grows about 18 inches high. The flowers are waxy and of a delicate pink color, very fragrant and borne in terminal cymose heads on stout leafy stems. It is said to be of easy culture

and free blooming, still, considering that it was exhibited a couple of years ago, we seem to know very little about it.

ERIGERON CHRYSOPSIDIS a new golden yellow flowered perennial from Oregon, where it grows on stony hills and mountain sides. Yellow is a very rare color among erigerons. "According to Dr. Asa Gray's synopsis of the N. American flora, yellow colored flowers are confined to this species and *E. peucephyllus*, the remaining 70 species having either white, pale purple or violet blue flowers." For amateurs.

GLIA DICHOTOMA, a sweetly pretty little thread-leaved, white-flowered Californian annual allied to the leptosiphon section of this genus. "Found wild in dry or moist ground, nearly throughout the western part of the state (Cal)." "*Lianthus dichotomus*, Bruth. formerly." For amateurs.

NEMESIA PUBESCENS comes from the Cape of Good Hope and is a copious and long lasting annual about 12 to 15 inches high and of bushy habit. "The flowers are borne in long terminal racemes * * ¾-inch across * * white and delicately but conspicuously veined with deep blue and purple lines." The more common species *N. floribunda* and *versicolor* I have grown for many years; they are pretty, extremely profuse, but not showy. For amateurs.

PENTSTEMON HUMILIS, a very neat little alpine species "common about Pike's Peak in the Rocky mountains, growing in tufts on rocky places," also "In the mountains from S. Colorado to the British boundary and westward." "Matted tufts of bright green foliage, the flowers being bright blue. * * Admirably adapted for the rockery." For amateurs.

PENTSTEMON ROTUNDIFOLIUS, a new and highly ornamental species, indigenous to the mountains of Chihuahua, Northern Mexico and where it was first discovered by Mr. Pringle in 1886, and first introduced to cultivation by Mr. Wm. Thompson, of Ipswich, England. It flowered at Kew last summer (the *London Garden*, page 15, July 7, 1888), for the first time in cultivation. It was figured and described in the *Gardeners' Chronicle* September 8 last, and again in *Garden and Forest* November 28 last. According to Mr. Pringle, the discoverer, "In the autumn of 1886 was found hanging * * from thinnest seams of dry granitic cliffs among the dry mountain chains southward from Chihuahua, a most singular pentstemon of much beauty. * * The plant is evergreen with short stems which branch freely; its leaves are broad, very thick and leathery, glaucous; its flowers tubular, scarlet."

ROMNEYA COULTERI.—One of the finest of California's herbaceous perennials and one that has been in cultivation in Europe for several years. The plant is of upright but straggling habit, has glaucous pinnatifid leaves, and large, showy, white, poppy-like single flowers that are five to seven inches across. It is easily raised from seed and grown, but it is not hardy here and seldom blossoms the first year from seed. I grew and flowered it eleven years ago. There are two colored plates of it in the *Garden*, but the best one is that of November 8, 1884. In California it is found "Borders of streams near San Diego" and "From Diego to Santa Barbara county; branching from a shrubby base and growing four to eight feet high, flowering from May to August."

AUBRIETIA LEICHTLINI is a little mat-like hardy herbaceous perennial that blooms in early spring. All of the aubrietias are pretty, carpet-forming little plants suitable for rock work, and they are easily raised from seed and seedlings as a rule come true to kind. This new comer came from a capital source, namely, Max Leichtlin of Baden-Baden, a most enthusiastic and critical amateur who has introduced and given to cultivation many of our finest hardy plants. But this plant has also been grown and flowered in England for at least a couple of years. A correspondent writing in the *London Garden* May 14, 1887, says of it: "It is one of the finest acquisitions of late years to the hardy alpine garden and, like the others, is quite hardy in the open air. * * It has rosy red flowers which when first open are very striking." But "A. D." another correspondent of the *Garden*, insists that the A. Leichtlini he saw in bloom from Kew "represented exactly a seedling form of *A. violacea* such as I have here in quantity."

THE SHIRLEY POPPIES are so called because they have been raised at Shirley, Croydon, near London, the raiser being Rev. W. Wilks, Hon. Secretary to the Royal Hort. Society and a most enthusiastic lover and grower of flowers. These poppies have been exhibited in London and made quite a sensation in England for the last few years. Mr. Wilks himself tells all about them in the *London Garden* July 2, 1887, and the editor remarks parenthetically, "The most refined and charming flowers we have seen for many a day." They are all single and semi-double varieties of the common European field poppy and the result of ten years' assiduous selection. In color they run from the purest white through the most delicate shades of rose and pink and carmine to deepest crimson, and some of the intense colored flowers are bordered with white and Mr. Wilks mentions some white flowers with a colored border and flaked and marbled flowers. Full double flowers are weeded out of this select race. I will vouch for the loveliness of these flowers for I've been working with them for some years myself. I sow them in the fall or spring broadcast and let them take care of themselves. They are very hardy. As cut flowers for home use nothing can be prettier; if cut in the forenoon before they are fully expanded they will last two to three days in good condition. Always cut poppies before the anthers open and show the pollen and then they will keep, but if you don't you will find that "you seize the flower its bloom is shed."

OSTROWSKIA MAGNIFICA noted in the *FLORIST* last Vol., page 326, is again offered, but by fewer dealers. It bloomed with Max Leichtlin in 1887 at Baden-Baden for the first time in Europe and at Veitch's, London, in 1888, for the first time in England. Veitch had bought Max Leichtlin's stock plants, hence his success, had he only got some seed he would not yet have had flowering plants. It is a magnificent hardy herbaceous plant from the mountains of Eastern Bokhara, hardy as a weed, grows four to five feet high, and early in July bears mauve-lilac flowers four to six inches across. It forms a deep reaching tuberous root some two feet long and after the fashion of *Platycodon grandiflorum* or *Michauxia campanuloides*. Veitch exhibited it in London, July 10, of last year, when it was awarded a first class certificate by the Royal Hort. Society. It was figured in the *Gardeners' Chronicle* July

OSTROWSKIA MAGNIFICA [SEE NOTE, PAGE 330]

[REPRODUCED FROM GARDENERS' CHRONICLE]

21, and a capital colored plate of it appeared in the *Garden* December 29 last. An English writer tells us "It is very easily obtainable, seeds being now offered by our English dealers. They readily germinate in a cold frame, etc." But the most experienced man in raising hardy herbaceous plants from seed in England writes: "The seeds are somewhat slow to germinate, when sown in spring they may remain until the autumn but grow more quickly if sown soon after being gathered. * * It is not likely to flower till the tuberous root has attained some size, probably not till the fourth year." Not very comforting news, but true, for I bought and sowed seed of it last spring and they are dormant yet!

SOME OF THE OLD NOVELTIES.

Among asters the Comet is good and we have a few slightly different shades of color in it. But aster Triumph is a long way off from scarlet. *Salvia coccinea* var. *lactea* has pure white flowers, but we can not regard it as very desirable. That wretched *Lupinus albo-coccineus nanus* again looms up in some lists; among lupins, with me last year, it was the most miserable. The rosy scarlet annual delphinium is to the front again; well, it is all right in its way and distinct enough in color—rose-pink and rose-purple, but not scarlet. Some people must have had good luck with *Delphinium Zaili*, for it is more plentiful this year than it was last and the seeds are of better quality. None of the seeds of it that I sowed last year came up. *Delphinium nudicaule* var. *aurantiacum* is a real pretty form of a pretty plant, but the species in any form is very hard to manage.

MINA LOBATA doesn't give us too much satisfaction, there are many complaints about its shy blooming nature. Six seeds for 25 cents just as before. It is hard to keep track of the sweet peas we get so many new kinds every year, and there are very few seeds in the packet. We have got to get them by the ounce before it will pay us to touch them. The Star of Queclinburg Drummond phloxes as a rule contained only one purple variety last year, but we expect them to contain a regular mixture this year, as all colors are now represented among them. They, at best, are more odd than beautiful. Some advertise poinsettia seed. I have raised poinsettias in this way, but never got as good heads of bracts as from cuttings. *Lapagerias* are also offered; well, they are often raised in this way. And I see Farquhar offers seeds of *Allamanda Schottii*.

Western Notes on Double Geraniums.

Twenty-two years ago, in the spring of 1867, the original double geranium was first disseminated in this country (a variety, if I am not mistaken, called *Ranunculaflora*). The same season I became the happy possessor of a plant of this rare and valuable acquisition to our then limited list of geraniums. As a matter of course I gave this plant the best possible care and attention, and as far as growing was concerned I was well rewarded for my pains, for the plant grew rapidly and soon attained gigantic proportions, but in its blooming qualities I was disappointed, producing as it did but two clusters of flowers during the entire season. While a geranium of this rank, coarse character would be worthless at the present time, yet in this instance it was a grand achievement, it broke the record and the floral world had added to it a double geranium.

During the next three or four years other varieties were produced, each new introduction being a slight improvement on the former, but all still bearing the same characteristics so objectionable in the parent plant; but along in the early part of the '70's there was another break, this time giving us semi-double flowers in varied colors, clean, short jointed wood and profuse blooming qualities of which *Asa Gray* is a fair type. After this new varieties were multiplied in quick succession until now their name is legion. It is out of this mass that I propose culling a few varieties which will be of special value to the florist and which will invariably give satisfaction to all lovers of geraniums.

Among white geraniums *Candidissima plena* has always held its own through our most trying summers; the clusters and the single florets are only of medium size, but they are borne profusely; it is always of the purest white, remaining fresh upon the plant longer than any other white geranium I have ever grown. *La Victorie* is another equally prolific variety with clusters of immense size, large white flowers, never showing the least tinge through our hottest weather; in its general character, this might be called a double *Queen of the Belgians*. Another popular variety in this vicinity is *Heroine*, not so much for its value as a bedder, but as a pot plant and for winter cut flowers it is constantly in bloom producing quantities of large white florets on long footstalks; it is rather a slender grower, but compact and bushy.

Among bicolors *Gloire de France* has quickly come to the front as a leading variety, it is of strong, short jointed branching growth, constantly in bloom, often presenting the appearance of a great ball of flowers, each floret distinctly marked with a white border, shading to a deep rosy salmon center, a geranium that never fails to attract attention. This variety and *Belle Nancienne* can easily be mistaken one for the other, but I imagine that *Gloire de France* is more decided in color, it is also a stronger grower and a more profuse bloomer. *Queen of the Fairies* is another desirable variety belonging to this class, it is a strong, rather tall grower, producing enormous crops of flowers almost continuously. *Mary Hill* is proving to be one of the best among pink geraniums, it might be called a semi-double *Master Christine*, being about the same shade in color and partaking of all the qualities of that sterling old single variety. A splendid old variety grown here is one called *Lafayette*, which, judging from the catalogues, appears to have been lost to general cultivation. In growth and blooming qualities it is similar to *Gloire de France*, but in color a soft shade of rose, as a bedder of its color it is unequaled.

Among salmons *Asa Gray* still holds its own; I first grew this variety fifteen years ago, I have grown it ever since and shall continue to grow it until I find something better of its color, a soft rosy salmon. Another old variety that is a favorite with us is one sent out I understand by Mr. Thorpe some ten or twelve years ago and called *E. G. Hill*, it makes a strong compact growth and is a constant and prolific bloomer, in color a deep shade of rosy salmon.

Among bright varieties *Paul Charbonnier*, scarlet; *Le Pilote*, crimson-scarlet; and *Grand Chancellor Faidherbe*, deep crimson overlaid with scarlet, combine all the qualities of first class geraniums; out of hundreds of varieties tried

within the last few years I have found none to equal them, either as winter bloomers or for bedding purposes. *Ernst Lauth* is another of our standard varieties, it makes a strong compact growth, early and constant in blooming, color of flowers a blending of crimson and carmine.

While there is no doubt that there are other varieties in the long list of double geraniums equally as good as the varieties named, yet I do say that for general cultivation there are none to excel them and if the grower confines himself exclusively to these kinds he need have no fears as to the final results. I am inclined to think that it is rather an unusual occurrence for three or four thousand geraniums in 2½-inch pots to be a mass of buds and bloom during the Christmas holidays, but such was the case in one of the houses here this season with the above named varieties, and although they have been potted up into larger sizes they are still in bloom and will continue so until they go out of the house.

D. M. REICHARD.

St. Joseph, Mo.

Is This Fraud?

In the February issue of *Popular Gardening* is advertised what purports to be a new plant, under the name of the "White House Fuchsia." This is the first time that the name "White House" to a fuchsia has been made public. It is possible that it is a new variety, but hardly probable. The cut used in the advertisement is a fac simile of one which in several catalogues is doing duty illustrating the merits of fuchsia Mrs. E. G. Hill. It is to be hoped that the advertiser is not so unscrupulous as to rename a variety already in commerce. Whether he has done so or not the using of an engraving of another variety is to be condemned.

The Society of American Florists has already done great good, but it has much work before it, or such practices as instanced above would not be possible in this country.

While on this subject or something akin to it, who knows the botanical name of "The Sweet Nightingale" and the "Rainbow Plant," which are being largely advertised all over the country? In some magazines in which the advs. appear there is some excuse, but journals devoted exclusively to horticulture should rigidly exclude such advertisements. Popular names are sometimes appropriate and often pretty, but let us have the scientific name in addition, so that there may not be any semblance of deception.

EDWIN LONSDALE.

In a later note Mr. Lonsdale adds: "At the time of sending my first communication I wrote the advertiser of the 'White House Fuchsia' enclosing \$1 and requesting that its value be sent me in the new fuchsia if it really was new and not another variety with a new name. I asked that in the event of its being the latter the money be refunded, to which he responded as follows: 'The fuchsia I have named White House was imported under the name of Snow Wreath. I bought all the stock and named as above. I am sure you have none of it.' If this is the case possibly no wrong has been done, though the use of a cut of another variety certainly deserves censure."

Mr. H. A. SIEBRECHT, of Siebrecht & Wadley, New York, is in the West Indies on a business trip. Mr. Siebrecht has a palm nursery at Trinidad.

News Notes.

BALTIMORE.—F. Frederick has opened a floral store at 922 West Baltimore St.

JOLIET, ILL.—J. H. Conklin has purchased the Stone City greenhouses and succeeds A. R. Starr.

NEW YORK.—The third annual orchid show of Messrs. Siebrecht & Wadley occurred at the Eden Musee Feb. 27.

PASSAIC, N. J.—A. Van Lenwen who has greenhouses and nursery at Garfield, has opened a floral store in this city.

NASHUA, N. H.—C. W. Hoitt has sold out his establishment and bought a new place where he proposes to erect a range of new houses.

CLEVELAND.—F. W. Ziechmann is about to open a floral store in the Cyclorama building, corner of Euclid avenue and Erie street.

PHILADELPHIA.—S. Hunter & Son have opened a floral store at 9 North 13th street. Jacob C. Cassel has opened a salesroom at 709 Arch street for the sale of his terra cotta ware, aquarium goods, etc.

HARRISBURG, PA.—About two-thirds of the decorations for weddings, balls, etc. here are furnished gratis, or nearly so, by the state greenhouses and those of private people. The effect on the regular trade can be imagined.

INDIANAPOLIS.—The Society of Indiana Florists held its third annual meeting February 22 and 23. A very interesting programme was discussed. The meeting concluded with a banquet the evening of the 23d.

ELMIRA, N. Y.—Grove P. Rawson has nearly completed another 160 foot rose house heated by steam. It is rather a novel feat to build a greenhouse of this size in the dead of winter, but of course the weather has been exceptionally mild.

MILWAUKEE.—Frank Whitnall, of the firm of Frank Whitnall & Co., has sold his entire interest to C. B. Whitnall. The firm name is now C. B. Whitnall & Co. John Bohan, of Chicago, has purchased land near the fair grounds and will build a range of rose houses on it.

NORFOLK, VA.—The assignment of the Brambleton Floral Co. was made to P. M. Metcalf as trustee. The greenhouses and city salesroom were sold under distress warrant for rent. The assets in the trustee's hands are city bills, total amount very small. The liabilities are quite large and the prospect of a dividend to creditors very slim.

WASHINGTON.—At the late White House reception held in honor of the army and navy officers the following well known florists were presented to President and Mrs. Cleveland: Mr. John N. May, Mr. Robt. Craig, Mr. W. K. Harris and Mr. Edwin Lonsdale. By some unaccountable error Mr. Harris was announced as "Dr. Harris," by which title he is now pretty well known in New York and Philadelphia.

PROVIDENCE, R. I.—Robt. Hogg, the veteran florist of Providence, retires from business. He has sold out his establishment to Wm. A. Appleton, Jr. T. O'Connor has a house 100 feet long with twenty-two foot rafters entirely covered by three roses. Two of the plants are La Marque and one Marechal Niel. The stems or rather trunks of these plants

are of enormous size and Mr. O'Connor has grafted on to them a score of other popular varieties. He claims that this house produces more buds and better than it possibly could under any other arrangement.

MINNEAPOLIS, MINN.—Trade has been very good here since the holidays, and prospects are very good for trade until Lent begins. The weather has been so warm here this winter that coal bills have been very materially reduced and quality of stock correspondingly advanced. The Minneapolis Florists' Club is no longer an experiment, but an established fact; membership about twenty-five. Three very interesting monthly meetings have been held and a much better understanding exists among the florists than before the formation of the society. One of the first actions of the society was to agree on an established price and published a list of prices covering cut flowers, baskets and designs. This list was published by the society, but no penalty is to be inflicted if members do not abide by it. It simply establishes a standard price for everything in the cut flower line.

Philadelphia.

The Pennsylvania Hort. Society has inaugurated a new departure in having essays on matters of interest read at each meeting.

This is a step in the right direction and it is to be hoped will be kept up. W. A. Reed, M. D., one of the first vice presidents, will prepare a paper to be read at the meeting to be held in March on "The History and Future of the Pennsylvania Horticultural Society." Dr. Reed should write to the effect that the blunders made in the past of appointing inefficient judges to act as members of the standing committees on awards will not be repeated in the future.

Papers entitled "Contributions to the Life Histories of Plants," by Professor Thomas Meehan, will also be read. These will furnish food for thought to those of a scientific turn of mind. And papers on cultural subjects will be furnished by Mr. Robert Craig and others.

E. L.

Chicago.

Huffert Bros. have succeeded L. Dreher & Co. at 205 North Clark street.

August Dressel has sold to Samuel Pierce his Clybourn avenue place and has built five greenhouses on a new place in Jefferson.

T. J. Corbrey has added a conservatory to his store on West Madison street with 42 feet of glass frontage on the street, and remodeled his store. His place now presents an unusually attractive appearance.

H. R. Hughes has bought land near Douglas Park and built thereon three greenhouses. He still retains his Van Buren street place.

Jno. Lang has succeeded J. Lang & Co. at Gross Park. Jos. Lang, who retires, will build a new place in the vicinity of the old one.

E. Weinhoeber, of Elm St., and his partner, E. Boettner, are on a trip east.

SAMUEL HENSHAW, of Staten Island, is in poor health, and as his physician advises him to try an ocean voyage, he has about concluded to go to England to visit his brother who has a charming place at Kingwood, near Bristol.

Our Hot Water Boiler.

This is a subject that interests all florists, and as the result of twelve or fifteen years of study and experimenting, we last winter constructed a boiler that we think is near perfection. We designed it especially to burn soft coal, but we can use anything that will burn, hard or soft coal, coke, wood or slack.

The boiler is horizontal, the heads are about the shape of the front half of a horse shoe, it is five feet long and three feet wide at the bottom, the two shells are four and one half inches apart, the space being filled with eleven three-inch flues, there is very little space for water and quick circulation is the result. The boiler is very simple and there is nothing to get out of order, the fire is underneath and passes to the back, then to the front through the flues out into the chimney. It is made entirely of copper, rivets flues and all, the shell is No. 14 gauge and the flues quite thin, about twenty gauge. Copper being one of the very best conductors of heat very little goes up the chimney. With the draft wide open and the heavy cast iron door to fire box red hot the front of the breeching or pipe leading to the chimney never gets so hot but that you can hold your hand on it without burning.

The boiler was designed to heat a house 20 x 150 feet long for roses; it is now heating a house 20 x 75 feet and have never had to keep the bottom damper open, in fact have kept it closed up as tight as possible; even in the coldest weather this winter (9° below zero) have had fire on only one third of the grate surface, the whole surface being seven and one half square feet. Being made of copper it is not affected by dampness, which is very destructive to iron boilers in summer. We have a good cast iron hot water boiler which burns fully one third more coal to heat the same amount of glass, and in cold weather heats the brick chimney quite hot. We also have a very economical steam boiler which works nice, but give us a copper boiler and hot water.

It may be interesting to some to know the cost of boiler. The material cost \$110; as one of the members of our firm is a practical mechanic we made the boiler ourselves, but any coppersmith or boiler maker could make one for twenty-five or thirty dollars.

Lansing, Mich. R. MANN & SON.

Care in Stoking.

I have read with a great deal of interest to say the least, the essays on hot water and steam heating in the columns of the FLORIST the past year, and have at times been pleased, at others indignant.

I do not write at the present time because I have anything particularly new to add, but because I have been stirred up a little lately by a statement in a circular on steam heating which chanced to come to my notice. For thirteen years past it has been my lot to act as stoker almost constantly on a place where at different times three to six fires had to be tended, and never in that time—even with the mercury 20° below zero—did I use 400 pounds of coal in twenty-four hours to keep 1,000 feet of glass warm enough for general purposes, (circular of Furman steam heater page 2), and this winter for a house with exactly 1,000 feet of glass surface and 800 feet of bench room, 2,000 pounds of broken coal lasts me about twenty-five (25) days, the last

ton doing just that. During this time there were only three times when the temperature inside fell below 54° Fahrenheit and the mercury outside has been at zero several times.

With the thermometer fourteen or even twenty degrees below zero I do not consider it very hard to keep houses warm; not nearly so difficult as when at as many degrees above with a strong wind, for usually here with mercury below zero the houses are banked up with snow and everything is still.

Every house we have is heated by the much berated flue, none working better than the last built. A well built flue, long, with quite a good rise on last end will generally get all the heat out of a ton of coal that there is in it. I confess I have looked out for these fires and watched them night and day. I am up sometimes during the night, but I never yet saw or heard of that arrangement for heating in actual use that did not require watching in order to keep an even temperature. All modes of heating have that failing which probably will never be remedied until men reach that point of excellence where they do not need watching. A house built substantially and tight, some kind of apparatus which does not send any great amount of heat out of the chimney and a man whose interest in affairs forces him not to waste fuel, and to keep the care of the fires on his mind are, as I look at it, the great requisites to proper heating, and be it steam, hot water or flue, care not to waste must be in the mind of constructor and care taker. EDWARD H. GODDARD.

Woodfords, Me.

Construction and Heating of Green-houses.

Much has been and much more might be written about constructing and heating greenhouses, and all give satisfactory results in their several localities.

Last spring I built a set of five houses, three 90 feet, one 40 and one 135 feet. My rose and carnation houses are 20 feet wide with two four-foot benches and two three and one-half feet, two two-foot walks and one of twelve inches. They are built three-quarter span, 16 feet on south side and 8 feet to the north; south side built with stationary sash-bars, using 16 x 24 double-thick glass butted together with white lead. There is hardly a leak to be found on the entire roofs.

This mode of laying glass does away with the place for dirt to collect where the glass is lapped and I think it makes a tighter roof, as where the lap system is used water will get in and when it comes to freeze presses the glass apart and lets in more or less cold air.

I am using a 16 foot (60 H. P.) boiler with 33 2½-inch flues, fire box 3 x 4 feet. Rose-house has four runs of 1½-inch pipe, carnation-house the same, but as the boiler is under the center of rose-house it is kept sufficiently warm.

What I find pays well for time spent is: First, to stop every hole where cold air can possibly enter; second, to clean the boiler flues at least once a week, once in five days is better; third, blow the boilers off once each month, as with a fresh lot of clean water steam can be made much more freely; fourth, keep a clean fire box, allowing no cinders to collect on grates and no ashes around the edge of fire box.

Try it and see if it does not pay.

Rutland, Vt.

W. D. LANE.

[The four recommendations are all

good, but we hope there are few in the trade to whom the admonitions will not be superfluous. Still as we mentally view quite a number of places we have visited where these simple operations were not properly attended to it may not be amiss to call their attention to these details simple as they are. We call to mind now a very erudite gentleman who had all the arguments pro and con in regard to hot water circulation at his tongue's end, but his boiler was almost entirely choked up with soot and ashes. His heating apparatus was not working satisfactorily then and had he asked us to recommend some change it would have been to the effect that he give his boiler a good cleaning out and then keep it clean. But it kept him so busy explaining to florist friends "where the other fellows were away off in their theories as to circulation" that he probably had no time to attend to such menial work as carrying out ashes or cleaning flues.]

What Florists Hear and Know.

The retail florist can hardly help becoming more or less familiar with the inside workings of fashionable society and the Philadelphia Times' reporter probably had to draw but little on his imagination in writing up the following interview recently published:

A leading florist was caught in a very good humor after his Christmas dinner and easily induced to talk over a small table and something else) in the cafe of the Bellevue Hotel. He said: "You may think I am joking, but I assure you I am quite serious, when I say that a florist ought to be a married man just as much as a doctor. Why, sir, think of the confidential relation that a florist occupies toward his patients—I mean his customers. I have in my possession secrets which would not only wreck the happiness of half a hundred happy homes, but break one-half the engagements which you have seen announced in the newspapers this winter to boot. "Come a little nearer, I don't want to be overheard. I've been in business now twenty-five years—twenty-five! and do you want to know the opinion which I have formed of a man in that time? I'll tell you. Come a little nearer. A man is not fit to send jimson weed to a woman. I've known bright, faithful, hard-working little wives that were just sunbeams at home tide over Christmas with ten cents' worth of greens and a dollar's worth of hyacinths, while their husband's cards were going out on Christmas Eve sung as you please in big boxes of Puritan roses at 9 a dozen to women that would no more smile inside their own doors than carry wood up out of the cellar.

"Does that happen only on Christmas? No, sir, it happens just ten times a week in my store and in all the other stores in town in proportion. Now what is a young man's temptation? Why to smile at his customer when he gets that order; to establish an affinity between that customer and himself. Now, sir, that is a wrong principle on which to do business, and I hold that it is the duty of the florist to deprecate such proceedings on the part of his clients as strongly as he can; to be utterly opposed to them and to calculate his bills accordingly. Come a little nearer. Let me tell you. A man who sends roses from my store to a woman who is not his wife, I don't care what square in Walnut street she lives in, that man buys his roses in the dearest market. I tell you, there are a great many things go to make up political economy.

"Then you take the young men about town. Why, if a newspaper was wise, if it really wanted the fresh, lively inside news of the day about our prominent society young ladies, it would buy a controlling interest in a florist's establishment. Indeed, it would. Come a little nearer. You may depend upon what I say. There isn't a prominent young lady in town but what I know where those bouquets she carries to parties and whom she favors. How do I know? Well, sir, suppose Mr. Smith and Mr. Jones—of course, I mention no names—both send a young lady flowers on the same evening and she walks into the place the next morning with two La France roses pinned on her muff and Mr. Smith has La France roses charged on his account for the day before. What conclusion are you to draw from that, especially if you are a man who knows the ways of women? That is what I say. In such a case, of a young fellow behind the counter, why, of course his natural impulse would be to laugh, because he would know that Mr. Smith had sent her only a dozen roses and had sent two dozen to her best friend. But with a married man the age of cynicism has arrived, and he looks on it only as a question of human degeneracy.

"My dear friend, I assure you I know the love affairs of all the young gentlemen in all the clubs in this city, and I'll make you a bet that I can sit down now and write you a list of where the bouquets will go for the first Assembly, who will send them and how high, unless there's quarrels between now and then, the senders will pay for them. And, what's more, a young man who had had as good a dinner as I would tell you; but I'm not going to."

Catalogues Received.

GERMOND & COSGROVE,

Box 69, Sparkill, Rockland Co., N. Y.

New Pure White Tea Rose The "QUEEN."

This splendid new Rose originated with us two years ago, and having proved valuable, is now placed on sale. It is

A PURE WHITE SPORT FROM SOUVENIR D'UN AMI.

A vigorous, healthy grower and continuous bloomer, producing a great abundance of Buds and Flowers all through the season. Flowers are PURE WHITE, showing no trace of Pink, makes good finely formed Buds and is moderately full. Petals are thick and of good substance, opens well, is a good keeper and very sweet. We believe it will prove especially VALUABLE FOR EARLY WINTER FORCING AS WELL AS FOR OPEN GROUND PLANTING, and recommend it for extended trial with the belief that it will be found a valuable acquisition to our list of Pure White Tea Roses.

PRICE: Strong well matured plants from 2½-inch pots, \$3.50 per doz.; \$25.00 per hundred. Two year plants from 5-inch pots, \$9.00 per dozen.

ADDRESS:

THE DINGEE & CONARD CO.,
ROSE GROWERS,
WEST GROVE, PA.

Mention American Florist.

ROSES. ROSES.

We have a very fine stock of Roses in four and five inch pots suitable for forcing, consisting of BON SILENE, BRIDE, LA FRANCE, MALMAISON, MERMET, NIPHETOS, PAPA GONTIER, PERLES, SAFRANO, SUNSET, and many other choice varieties. PRICE, \$10.00 to \$12.00 per hundred.

ELLWANGER & BARRY,
MOUNT HOPE NURSERIES, ROCHESTER, N. Y.

ROSES.

All the best NEW and Standard Varieties of Teas, Hybrid Teas and Hybrid Remontants, in extra fine plants,

From two inch, three inch and four inch pots Standard sizes.

By the Dozen, Hundred or Thousand.

Also all the best select 1 varieties of Everblooming and Hybrid Remontants for Bedding.

At prices as low as strictly first-class stock can be produced for.

Price list now ready and will be mailed to all applicants in the trade.

JOHN N. MAY,
SUMMIT, NEW JERSEY.

GIANT MOON FLOWER; TRUE VAR. WHITE SEED.

I am now ready to contract for above, fall delivery 1889, 200 lbs. Also 2nd size Pearl Tuberoso, \$5.00 per 1000. Orders solicited now for Antigonon leptopus at \$10.00 per 100. 20 var. Cacti from 5c. to \$25 each. Mrs. J. S. R. THOMSON, Spartanburg, S. C. 2 years State Vice-President S. A. F.

WANTED.

Two large tree Ferns of any of the following vars.:

DICKSONIA ANTARCTICA,
DICKSONIA FURCATA,
CIBOTIUM GLAUCUM,
CIBOTIUM REGALE.

Address CHAS. DISSEL, 604 Chestnut St., Philadelphia, Pa., stating height of trunk from earth to first frond, and price.

Holiday Prices.

The subject of holiday prices has evoked much discussion recently in the horticultural papers and elsewhere.

Retail florists complain that the prices of cut flowers are for certain special occasions advanced by the commission men and growers to such unreasonable figures that it is impossible for the retailers to serve their customers satisfactorily or with profit to themselves. It has been asserted that the growers and commission men deliberately combine at such times for a specific purpose, that purpose being to force prices up, and that they succeed.

It is true that prices of certain flowers do advance sharply at the holidays, but it is equally true that prices of the same varieties do fall with equal suddenness at other times. What is the cause? If it is possible for the wholesalers and the growers to successfully make such a deal as has been referred to once or twice a year, say at Christmas and Easter, why is it not just as practicable for them to do it to a greater or less extent at other times or continuously? And might not the growers with equal reason charge the retailers and commission men with combining to put the prices down at other times?

As he whose situation affords him a view of both sides in such a controversy should be competent to judge impartially it would seem that the commission dealer, standing as he does midway between the producer and the consumer, under equal obligations to both and having corresponding facilities to become familiar with the necessities and opportunities of each, should be able to throw a little light on this question, and possibly at the same time disprove some of the absurd charges that have been made against himself.

The whole question seems to me to be simply and wholly one of supply and demand. It is an accepted principle of trade everywhere that overproduction of any article of commerce will bring a tumble in prices, and as surely will an insufficient supply be accompanied by a very decided rise in values. The wheat crop fails; we expect to pay more for our flour in consequence. There is an unusually heavy crop of apples, peaches, or other fruit; the grower knows from experience that he is lucky if at such times he gets anything beyond the cost of marketing. Let the demand for any article, be it coal, iron, wool, or anything else, exceed the available stock and prices are bound to advance. Let the supply exceed the demand and prices must come down. If this be the case as regards perishable goods how much more true it must be when perishable material is handled.

An increase in the market prices of cut flowers results not so much from combi-

nations or from the fact that it is Christmas, but simply because the demand does or is expected to exceed the supply ready for use at that time, and he who is fortunate enough to hold any of the goods naturally takes advantage of his opportunity, while there are sure to be buyers enough who in their eagerness to possess the goods are ready to meet him more than half way. The assertion that the growers being compelled all through the balance of the year to sell at unremunerative rates are obliged to depend on excessive prices at the holidays may be and in all probability is true, but the grower is by no means master of the situation on that account. For should the weather turn unexpectedly warm or the crop of flowers from one cause or another be in excess of all demands, then the combined efforts of commission men and growers will be of no avail in advancing prices, even though the balance of the year should be so disastrous to both as to force the whole crowd into the poor-house.

This will be readily understood by a study of the market in the case of lily of the valley, tulips, freesias, hyacinths, etc. These varieties can be produced for special occasions in any desired quantity and barring occasional failure through accident or neglect it is an easy matter to provide in advance for all expected requirements, and consequently there is little or no increase in the price of such goods at the holidays. Could the cut of roses be as readily controlled and future demands provided for with the same certainty we should hear nothing of high holiday prices. In fact roses and violets are about the only varieties which at the present day occasion complaint. Carnations advance slightly, but they seldom cost at wholesale more than two or three dollars per hundred, and surely no one can find fault with that.

Certain retail florists have been threatening to close up their stores in future during the holidays "to teach the growers a lesson." Such a course would have but little immediate and no permanent effect on prices one way or another. For there would still be florists enough to use up all the good stuff obtainable and to profit by their opportunities of supplying their neighbor's customers.

Much sympathy has been expressed for the purses of the poorer classes of flower buyers who are supposed to be deprived of the pleasure of buying and giving flowers at the holidays. This seems to be, in the main, gratuitous and unnecessary. We can have jewelry without spending a fortune in diamonds, good fruit without buying hothouse strawberries at two dollars a pint, and fresh flowers without investing our all in mid-winter Jacqs, Beauties and Marie Louise violets. These things may well be left for those who can afford such luxuries and who will be all the more eager for

them if they feel that they are out of the reach of the "plebeian folk." With the wholesale price of hyacinths and tulips at 50c per dozen, smilax at 12c to 15c per string, and stevia, bouvardia, heliotrope, etc. but a penny a spray there is no need that the owners of slender purses should suffer for flowers at Christmas.

Least of all should the commission men be charged with any irregularities existing in the flower market to-day. They do not claim perfection, and in fact they have become so thoroughly accustomed to having all the misfortunes and sins of the business saddled on to their patient backs that they are almost persuaded and convinced that they are all that they have been painted and secretly in league with the evil one.

But in our reflective moments we can not but remember that before the advent of this method of distributing flowers the irregularities and fluctuation in prices were much more frequent and pronounced than now. Every cold snap was a Christmas for the retailers in those days and every warm spell a Waterloo for the growers. Other causes, it is true, have contributed to bring about this changed state of affairs, but the old conditions would prevail much more generally than they do to-day if it were not for the wholesome influence of the wholesale dealer, who from the very nature of his obligations to his customers and to his consignors is bound to resist sudden advances as well as sudden breaks, and who by his facilities for obtaining and distributing vast quantities of flowers acts as a check upon the raids of the growers on the retailers and of the retailers on the growers, which once gave such a spice to the flower trade under the old "bull and bear" regime.

A bad omen for the future is the enormous annual increase in production, an increase far beyond the current demands of the business. The average price of cut flowers throughout the year has shown a steady decline every year for some time past, until it is now undoubtedly true that the grower has to part with his commodities during a large part of the year at a figure below the cost of production. Methods of buying and selling are not alone responsible for this. The annual decline in prices must necessarily go on just as long as the present rate of greenhouse construction continues. But "rock bottom" will be reached some time, and the sooner the better for all of us.

WM. J. STEWART.

THE AMERICAN FLORIST CO., Chicago.

New York Market.

Business is very quiet still, in spite of bright weather. Comparatively few good Beauties are in now; the finest of the season are from John N. May. Jacqs are poor, many being short-stemmed, and consequently unsalable. Ernest Asmus is sending in fine Gloire de Paris; hybrids generally are plentiful. John N. May is sending in fine Mrs. John Laing, which is received with favor.

Dutch hyacinths (double) sell feebly at 75c a dozen; they do not take very well.

Russian violets are to be seen in moderate quantities, but they are flimsy of texture and small; they do not sell so well as the double flowers.

The highest priced carnations are Grace Wilder and Buttercup; they always bring more than the red or white.

Lilium Harrisii is still over plentiful, and the same may be said of most bulbs. Trade is generally considered poor.

EMILY LOUISE TAPLIN.

A Dear Friend Remembers Us.

We now hold up to the envious gaze of the private citizen one of the trophies which occasionally fall to the lot of the editor, and at the same time acknowledge with pleasure a favor delicately extended us by a whole-souled friend. He sent last week a communication from Rochester, which begins:

Mr. Editor, DEAR SIR:—It gives us real pleasure in continuing the practice established by the founder of our house nearly half a century ago, to present you with a collection of seeds of your own selection, to the amount of five dollars, with the best of wishes for the New Year.

The words "Vick's Seed House" are printed at the head, which show our admirer's calling to be one which really fosters that occupation ennobled by the historic sufferer from the first earthly eviction. It is natural that he should emphasize his rarest and freshest wishes for our New Year by a gift of the fruits of his labors. We might betray an unseemly avidity in an inquiry as to how the presentation would be made, but this is forestalled by the ideal friendship which prompts the following particulars:

Please select what seeds you may desire from "Vick's Floral Guide" of 1889, mailed herewith. These we will send by express or mail, *free of charge*, or, if you wish us to select them, please notify us of the fact, and also state whether you prefer flower or vegetable seeds, or a part of each.

The upright editor's reluctance to be forced into business relations with a grasping, slinging and smashing monopoly is recognized by Mr. Vick in his prepayment of express charges, and if an editor has acquired a habit of using flower seeds, or possesses an inherited preference for vegetable seeds, or a Mugwumpian propensity to get "a part of each," the services of the donor may be had in their selection. He continues:

Your order will be filled any time when presented. Our flower and vegetable seeds need no recommendation to the press, and we wish every editor in the country to try them. Of course, we do not mean a peck of beans, or a bushel of grass seed, or the like, as some have misunderstood, but a collection of choice seeds for trial. If you think the "Guide" worthy of notice, the favor will be greatly appreciated.

We cannot suppress our exultation at the fact here kindly but firmly set forth, that our contemporary will be cut off from any attempt to get a peck of beans with which to increase the strength or improve the flavor of his soup, and the scheme (which would instantly occur to editors) for getting a winter's supply of provisions under the guise of seeds is wisely made impracticable. But one of the true signs of gentility and refinement is seen in Mr. Vick's graceful way of conferring a great favor and, in the last sentence of the foregoing paragraph, giving the recipient at the same time an opportunity to imagine that he is returning even a small one. People who have expressed the opinion that we would never amount to much, anyway, cannot overlook our friend's gratifying insinuation that we are worthy to notice the "Guide."

Mr. Vick incidentally refers in the next paragraph to a strange freak of some former editorial friends, and has gone to the expense of making various electrotypes, in good natured compliance with many requests:

We offer you these seeds free, same as in years past, as will be seen in first few lines of this article, but many of our editorial friends in former years have requested a cut of our advertisement, that they could slip it in their paper occasionally, either in payment of the offer of plants, bulbs, etc., or for old acquaintance sake.

To meet this demand we have now on hand electrotyped advertisements, celluloid (if metal on wood is preferred please notify us), thirteen ems wide, no type to set.

Slip it in the paper occasionally! Dear

Mr. Vick, with what a rare knack do you make us feel perfectly at home with you! The appropriateness of the suggestion grows on us, too, the more we think of it. Of course we will! Informally, too, you know, and at unexpected times—just as your dear old grandmother used to slip a cake or a big apple into the side pocket of your jacket when you were going away, after you had munched cubes of fruit cake, eaten quince preserves, and picked the only ripe raspberries in the garden, acquiring unconsciously a taste for the seed business, together with lasting practical lessons in the art of getting something for nothing! And for "old acquaintance sake!" Don't touch too frequently that responsive chord, dear Vick, or, instead of demanding the "35 agate lines double column electrotypes," we will insist on the four other convenient sizes, described further on, and gleefully pop them in one after the other, in the lusty vigor of an unalterable friendship.—*Brooklyn Standard Union.*

A Good Man, Too.

"Heard about the latest Cincinnati candidate for a government position?"

"Don't know as I have. Who is it?"

"H. W. Gardner, the Fourth street florist. He wants to be head gardener at the White House, and is making a vigorous canvas for the position. Good man, too."—*Cincinnati Daily.*

Steam Heat.

Mr. Titus in his article on heating in the issue of January 1, argues very strongly for the hot water system as being more economical and a superior heat to steam.

The writer used the hot water system for six years and is now using steam the third year, and for economy, ease of management, perfect control of temperature and cheapness of construction we believe steam has no equal. It is not a question with us as florists how hot or cold the chimney should be kept, but how we can heat our houses in a satisfactory manner with the smallest consumption of coal possible. Granted that Mr. T.'s steam chimney would be much hotter than would be the case with a hot water system in open circulation, but I challenge him to show by practical demonstration that it takes more coal to maintain a steam plant than a hot water apparatus.

We may very well ask ourselves the question can we grow as good plants and cut flowers with steam heat as with hot water? In practical experience no difference can be noted and the "fierce heat" coming like a "hot blast" on our plants is unknown in our houses and some of our rose plants grow up around the pipes overhead and are never injured unless they actually touch the pipe.

In our Minnesota climate it is probably as difficult to heat greenhouses as any place in the country, yet we heat about 14,000 feet of glass with a boiler capacity of thirty-two horse power, about two hundred and twenty-five square feet of glass surface to the horse power. For fuel soft coal is used and the boilers can be left for several hours, but experience shows it to be the safer and more economical plan to keep a man to look after the fires at night whether water or steam is used. HARMAN & SON, Seedsmen, SOUTH BEND, IND.

Forcing the Lilac.

Forced white lilac has been much in demand of late years. The forcing of this, in the way that the Parisian market gardeners treat it, is not fully understood by every one engaged in the production of flowers in winter in this country. It may be taken as a rule that if plants are hurried into bloom in a very high temperature it causes the flowers to come thin in texture. This is particularly the case when the plants are hardy, as the lower the temperature they are naturally able to bear, the more they are weakened by being subjected to strong heat. To this lilac is an exception, as the plants will stand a higher temperature than most things while being brought into flower without its having any effect on the flowers in the way named. Even when the plants are forced in the dark it has little influence on them as far as affecting their durability when exposed to a dry atmosphere. A temperature of from 80° to 90° is not too much to force lilac in. When white varieties are used there is no need to darken the plants with the object of having the flowers white, but the darker colored sorts will not come so pure in color if exposed to too much light. The objection to large bushes for forcing is that they take up much room, smaller or medium-sized examples that have been especially prepared for the purpose being best, as when these have been well managed they will give more flowers proportionate to their size. The plants may be either potted in the ordinary way or they can be put into boxes or baskets. In lifting the plants the roots should not be broken more than necessary, as the more fibres they have the less will the flowering be affected. During the time they are in heat the syringe should be freely used. In a high temperature, approaching that mentioned, the flowers come on quickly. When the plants are wanted in bloom soon after the commencement of the year they should be started without delay.—*London Garden Dec. 22.*

H. CANNELL & SONS' CATALOGUES.

Our Floral Guide contains all the new and valuable novelties in Europe, and an immense amount of valuable information; it is the largest, and totally different to any other catalogue. Our plants are so good (and our well-known packing) that we get them out alive all over the world. Messrs. Peter and John Henderson, Thorpe, Dreer, Allee Burpee, etc., are our personal friends and visitors when in England—sent free for 15 cents.

FOR CUT FLOWERS. Our Begonia "OCTAVIE" which rivals the Camellia and Gardenia, and received almost as many certificates as all other Begonias put together, would be of immense value to the American trade. Tubers 10s. 6d each.

Mr. MYRON A. HUNT, florist, Terre Haute, Ind., U. S. A., April 2nd, 1888.
The Begonias are at hand, in the best of order. Allow me to thank you for the very prompt attention to my telegram.

Mr. W. TRICKER, gardener, Judge Benedict, New Dorp, L. I., New York, U. S. A., Jan. 12, 1888.
The box of plants arrived in good condition, notwithstanding twelve days' delay in Customs—thanks to your excellent packing.

THE BAY VIEW NURSERIES

Offer to the Trade a few very fine ORANGE TREES

MEDITERRANEAN SWEET.

These trees are five years old, and have large well shaped heads; are clean and very thrifty. If put into 24 or 30-inch tubs this Spring, they will become thoroughly established during the Summer, and be in condition to force next Winter for either flowers or fruit.

Until stock is exhausted we offer them at the low price of \$1.00 each, \$10.00 per doz., securely packed.

For other Plants and Tropical Fruits, see our price list.

R. D. HOYT,

MANAGER,

BAY VIEW, FLORIDA.

SUCCESS AT LAST!

COOK'S AMERICAN SEEDLING RED ROSE

THE UNRIVALLED SOUVENIR DE WOOTTON.

BON SILENE X LOUIS VAN HOUTTE.

BROTHER FLORISTS:

You have wanted for years a continuous blooming red rose, for culture under glass.

First, Came ANDRE SCHWARTZ, the red SAFRANO, which has proved utterly unfitted to our climate.

Second, WILLIAM FRANCIS BENNETT, the superb red bud, which at times is unexcelled. Its faults, however, we all know by this time. No one can prevent its habit of resting or its tendency to black spot. Very few can grow it with sufficient stem. Its fugitive color will always be a great drawback, and its serious lack of lasting qualities, cannot be denied successfully.

Third, Came AMERICAN BEAUTY (synonym, MADAME FERDINAND JAMAIN). That majestic flower, superb in color, in perfume, in growth, but not so free flowering, and occasionally producing defective blooms. We could not get along without it. It has had no equal among the hybrid teas for large work.

Fourth, Came PAPA GONTIER, with good shape, good color, and good foliage, but liable to crop, and with a tendency to drop its leaves, caused probably by its Bourbon parentage. This rose is an excellent shipper and keeper, but alas it has no perfume.

Fifth, Comes our WOOTTON, a genuine American Seedling, with the following good qualities:

First, Color, velvety red, equal to Jacqueminot.

Second, Perfume which cannot be excelled.

Third, Continuous flowering qualities. It has no resting period—blooms and new growth existing at the same time.

Fourth, The most prolific bloomer in existence, every shoot containing a flower bud.

Fifth, Habit, exceedingly vigorous and in foliage quite equal to the American Beauty.

Sixth, It never makes imperfect buds and dark weather but deepens the color, giving it a richer shade of crimson.

Seventh, It retains its color for a long period; flowers having been kept by us in good condition for two weeks after being cut.

Eighth, It is a full double rose, and is good in bud, half open, or fully expanded. Full open flowers frequently are six inches in diameter.

Ninth, The color is even more intense and brilliant at night than in the day.

Tenth, It is free from black spot, the great enemy of the Bennett.

Eleventh, Its shipping qualities are perfect.

Below we give you the daily record of the number of perfect flowers cut from five hundred bushes, during the month of December, 1888:

Dec. 1	148
Dec. 2	132
Dec. 3	52
Dec. 4	82
Dec. 5	153
Dec. 6	105
Dec. 7	91
Dec. 8	204
Dec. 9	36
Dec. 10	69
Dec. 11	159
Dec. 12	94
Dec. 13	113
Dec. 14	82
Dec. 15	96
Dec. 16	112
Dec. 17	156
Dec. 18	83
Dec. 19	55
Dec. 20	63
Dec. 21	20
Dec. 22	43
Dec. 23	45
Dec. 24	83
Dec. 25	90
Dec. 26	96
Dec. 27	81
Dec. 28	40
Dec. 29	46
Dec. 30	33
Dec. 31	63
Total	2731

Or on an average of 88 per day. A large portion of these blooms brought 40c. each at wholesale.

Since the first of Jan. the bushes have been disbudded to secure wood for propagation, and some days as many as 1400 buds have been pinched out. We shall bloom not less than 6000 plants during the next winter, and cast aside every other red rose.

OPINIONS OF PROMINENT FLORISTS.

JOHN HENDERSON & CO.,

FLUSHING, Dec. 11, 1888.

"This rose (Cook's Souvenir de Wootton) is among the best continuous flowering ones, being beautiful in color, form, and fragrance, which will undoubtedly commend it to all."

MRS. GEO. W. CHILDS,

January 7, 1889.

"Mrs. Childs received this afternoon, the beautiful Wootton roses Mr. Durfee so kindly sent her, and which she admires not only for their beautiful color, but for their delicious odor."

WM. J. STEWART,

BOSTON, January 8, 1889.

"The Woottons arrived in good condition. The La France, American Beauties were faded and gone, and the Puritans were brown as a bean."

JOHN BURTON,

CHESTNUT HILL, PHILA., Jan. 25, '89.

"Have just received box of roses. The Woottons are fine, and I think it cannot fail to be a profitable cut flower rose."

ROBERT CRAIG

PHILADELPHIA, PA., Feb. 5, '89.

"I think the Wootton will be a popular rose because it is such a free bloomer and so vigorous in growth. Many growers have failed to get entire satisfaction with Bennett and Beauty, but the Wootton will, I feel sure do well in almost any soil with fair treatment."

Remember, No Imperfect Flowers like the American Beauty produces.

✻ 60,000 YOUNG PLANTS FOR THE TRADE AT REASONABLE PRICES, AS FOLLOWS: ✻

\$180 per thousand.	\$25 per hundred.
\$100 per five hundred.	50 cents each.

JOHN COOK, Baltimore, Md.

MESSRS. STRAUSS & CO.

Beg to add, that they have a Large Stock of Young Plants of the following Roses at very reasonable rates:

AMERICAN BEAUTY, ANNE COOK, CATHERINE MERMET, THE GEM, PURITAN,
PAPA GONTIER, MADAME CUSIN, THE BRIDE, LA FRANCE, PERLE.

Their PURITAN and LA FRANCE have been pronounced the finest in the United States. A complete change of stock every two years seems to be essential to continued success in rose culture under glass.

A Florist Who Has No Use for This Paper.

One of our leading(?) florists says he "knows more than the AMERICAN FLORIST or any other paper can teach him." Customers who visit his model(?) establishment report the mud in the walks to be from two to five inches deep, that certain plants have lain in the same position for a year or more and that even geraniums refuse to flourish except in bean-stalk fashion.

Added to his eminent qualifications as a florist he is an excellent customer of the nearest wet grocery. His employees on leaving him are usually obliged to sue for their wages, which gives him something to do and helps pass away the time he disdains to waste on "them papers, what don't amount to anything anyhow." While it is sad that the FLORIST can not have the support of this influential man I question whether it would be of any great value to you. C.

[We shall make a mighty effort to struggle along without it.—ED.]

ILLUSTRATION HORTICOLE for January contains excellent colored plates of three new chrysanthemums—Jane, Admiral Sir Th. Symonds and Lady Randolph Churchill—and Passiflora Watsoniana.

JOSEPH W. VESTAL, Little Rock, Arkansas.

THE WONDERFUL PEACH.

The cut shows the form one-half diameter or quarter natural size. Largest specimens measure a foot in circumference and weigh nearly a pound. Rich yellow with carmine cheek; of very uniform size, shape and mould; firm, rich, juicy, excellent; the flesh is yellow and bright red at the pit; a perfect freestone; ripens the second week in October (or after the Smock) and lasts two weeks after it is picked. The tree is a strong grower, bears every year and more than the tree can carry. The best yet for canning and evaporating. As remarkable for flavor as for size and beauty. Its name has been spoken spontaneously without knowing it by hundreds of people on seeing it for the first time, "Wonderful!" As good as Crawford's Late in other respects and bears on the average three times as much fruit. The only time it was placed upon exhibition it was awarded a first premium over all others and a special premium of a Silver Medal. Full information (history, description, prices of trees, testimonials of experts, &c.) and a colored picture of it mailed free. Also a pamphlet on the culture of the Peach with descriptions and prices of all the standard and new varieties.

Lovett's Guide to Horticulture, a handsome book of nearly 100 pages, finely printed and over 200 illustrations, describing every kind of hardy Fruit and Ornamental Tree and Plant, new or old, giving both defects and merits; replete with instruction on planting, pruning, culture, &c., and quoting Trees and Plants at half what they are usually sold for, will be mailed, with colored plates for 10 cents, or without plates free.

Plants by mail to all points of the Continent a specialty.

Mention this paper and a copy of Orchard and Garden will be mailed free.

Regarding the Expansion Tank.

In the article on greenhouse heating in January 1 number, Mr. E. S. Titus states that "the height of tank is sufficient to create a pressure in the pipes of about 15 lbs."

Allow me to ask through your valuable paper what height above the pipes the tank should be to give a pressure of about 15 lbs? Is the tank on the return pipe near the boiler? JNO. STEWART, Benmiller, Ont.

CORRECTION.—In Mr. A. Giddings' adv. on page 310, last issue a typographical error made the price of his geraniums \$1 per 100 instead of 4 for \$1, as it should have read.

THE LITTLE CLIMAX SPRAY PUMP

HANDSOME,
USEFUL,
DURABLE.

ITS EQUAL has not been invented for Spraying delicate plants and for using Insecticides in greenhouses to destroy MILDW, RED SPIDER, ETAL., or for spraying Flowers and Shrubs on the Lawn. It throws a Fine Spray 15 feet and a Solid Stream 40 feet; a perfect Pump for washing Windows, Porches, Carriages, etc. Only weighs 21 pounds; legs are unscrewed and it is packed in a neat, strong box for shipping.

FURNISHED COMPLETE FOR \$12.00.

"STANDARD" POTS

Ours is the only firm that has, up to this date, March 1st, 1889, made pots which
conform in EVERY PARTICULAR to the requirements of the Committee of S. A. F.

THE
BEST,
CHEAPEST

and most durable pots manu-
factured.

Endorsed by all the leading
florists.

For price list of the "STANDARD" POTS, address

THE WHILLDIN POTTERY COMPANY,

No. 713 & 715 Wharton St., PHILADELPHIA, PA.

SYRACUSE POTTERY CO.

are shipping immense quantities of the New "Standard" Rim Pots in all sizes under 3 1/2-inch. Don't you believe it? Order a crate or send 6 cents for postage on a sample. These are far superior to our old style smooth pots, and are sure to take their place. They nest better, we pack more in a crate and they go very safely indeed. They are exact inside measure. The 4-inch will be ready March 1st, and the 3 1/2 and 5-inch March 10th, while the 6 inch expect April 1st. The machinists have delayed us a month.

PRICES OF "STANDARD" POTS,

Size.	Price of 1000.	Crate No.	Price Crate.	Size.	Price of 1000.	Crate No.	Price Crate.
1 3/4 in.	\$2 80	4000	\$11 20	3 in.	\$5 00	1400	\$7 00
2 in.	3 20	3168	10 00	3 1/2 in.	7 00	1000	7 00
2 1/4 in.	3 60	2500	9 00	4 in.	8 50	600	5 00
2 1/2 in.	4 00	2100	8 40	5 in.	16 00	360	5 75

We pack and deliver here f.o.b. 400 lbs. is the weight of a crate. The frt rate to Boston is 10c.; New York, Philadelphia or Baltimore 15c.; Pittsburgh, Wheeling or Cleveland 16c.; Detroit or Columbus 19c.; Cincinnati 21c.; Nashville 32c.; Memphis 37c.; East St. Louis 29c., and Chicago 25c. These are samples of the rates, and smaller places are just as low. Syracuse has great frt facilities. Try a crate. Samples all sizes in first crate. We shall always keep a stock of our Rose Pots and all sizes of fine hand-turned pots from 7-inch to 16-inch. Now about our stock of "Old Style" smooth pots—2 1/2 and 2 3/4-inch are all gone; 3 1/2, 3, 5 and 4 1/2-inch are nearly gone, but plenty of 4 and 6 inch. Here are the prices and crates of "Old Style":

Size.	Price of 1000.	Crate No.	Price Crate.	Size.	Price of 1000.	Crate No.	Price Crate.
2 1/4 in.	\$3 40	2625	\$ 8 90	4 in.	\$ 8 00	600	\$4 75
2 1/2 in.	4 00	1875	7 50	4 1/2 in.	12 00	360	4 25
3 in.	5 00	1150	5 75	5 in.	14 00	320	4 50
3 1/2 in.	7 00	875	6 00	6 in.	22 00	160	3 50

The 2 1/2 and 2 3/4 in. we will make to order, and as soon as the 3 in., 3 1/2, 4 1/2 and 5-inch are sold out, we can only make them and ship 10 days after ordered. We cannot agree to keep up a full stock of both styles of pots, but we aim to be always ready for big orders of "Standards." You may now order heavy on all sizes under 3 1/2 in. Finally, we make this **EXTRAORDINARY OFFER:** Until March 15th, discount five per cent. on sizes 3 1/2 in. and UNDER, when ordered in ready packed crates (both "Old Style" and Standard), and cash with the order, by Money Order or New York Draft. This is to have you try us at once. Every word of this offer is important. Everybody write and ask questions. We have a stenographer to answer every one fully and promptly. Remit to

E. H. LIBBY, editor of the *American Garden*, has been dangerously sick of typhoid fever, but is now, we are happy to hear, recovering.

GREENHOUSE HEATING.

BY A. B. FOWLER.

Explains fully all the best systems of heating greenhouses by both hot water and low-pressure steam. Tells you the points to consider in selecting an apparatus. How to adjust same to various locations; gives the results of the latest scientific experiments. Shows how to compute the number of feet of pipe required for a given space; draught and other important matters.

It is highly commended by Mr. John Thorpe and others. Postpaid, 75c.

Sent on receipt of price. Address,
AMERICAN FLORIST,
CHICAGO.

J. H. IVES, DANBURY, CONN.

SUPPLEMENT TO THE AMERICAN FLORIST

Vol. IV.

CHICAGO AND NEW YORK, MARCH 1, 1889.

Supplement to No. 86.

The Mail Trade.

General advices indicate that the mail orders from seed and plant catalogues are from 10 to 20 per cent less than last year up to February 15. There are many surmises as to the cause, such as: "Buyers are waiting to be sure the winter is over," "present prices of many vegetables are very discouraging," "Hard Times." However, "all signs fail in dry times," and the facts as above stated are undoubtedly true to date.

Youngstown, Ohio.

Plants of all kinds are looking well, strong and healthy, the weather having allowed plenty of air and not very severe firing necessary to maintain the desired temperature being favorable to their welfare. And as the days are beginning to lengthen we expect to reach the spring with a large stock of healthy plants. The general business prosperity of the country along with the increasing taste for the culture of flowers makes the outlook for spring favorable to the florists. For the last year or two everybody who wanted to work has been steadily employed, giving him means over and above what is necessary for bodily support, a good part of this surplus, with those owning houses, shall go to the purchasing of flowers, trees and seeds for the decoration of the same.

MANSFIELD MILTON.

Print your SPRING TRADE LIST in the AMERICAN FLORIST. It will cost you less money and do you more good than

ELLIS BROS.,
Keene, N. H.

to print and mail your list yourself. We will print and mail your list, in the columns of this paper, to 5,000 buyers for much less than the postage alone would cost you. A full page in the FLORIST costs only \$42 for one insertion. It would cost you twice that sum to get up a list of your own and mail it to 5,000 addresses. Think it over! We can save you money and secure you better results at the same time, for the FLORIST is preserved while your trade list otherwise mailed would rarely be kept on file. We will print extra copies for you—from the type after being set—at a nominal rate if you wish extra ones to mail in response to requests. If half a page is large enough it will cost you but \$21 for the service.

ISMENE CALATHINA.—I want a picture of a lily called Ismene calathina. Can some reader send one?

GEO. W. CALDWELL.

Evergreen, Ala.

FLORISTS TAKE NOTICE.

CATALOGUE AND WHOLESALE TRADE LIST ON APPLICATION.

PAUL BUTZ & SON,
LOCK BOX 97. NEW CASTLE, PENNA.

To the Florists and Plant Dealers of America

HAMMOND'S SLUG SHOT.

An Insecticide USED FOR TEN YEARS. Tried, tested and found by experience safe to use and effective in destroying ALL leaf-eating insects, such as POTATO BUGS, CATERPILLERS and SLUGS, and many juice suckers like APHIDES; also very effective against SQUASH BUGS, FLEA BEETLES, etc. The "GREASY CUT WORM" and others are deterred very largely in their destructiveness for they avoid plants around which it has been placed.

Put in 5 and 10 lb. packages in barrels; Barrels in bulk 235 lbs.; Kegs 125 lbs; Canisters with screw top filled.

THRIP JUICE.

A Concentrated Liquid Insecticide bearing an average dilution of 200 times its own bulk in water making it probably the cheapest insecticide in the world, for SCALE, APHIDES, RED SPIDER, CODLING MOTH, CATERPILLERS, etc.

Put up in Cans, size half-pint, one pint, quarts, gallons, 5, 10, 25 and 50 gallon packages.

GRAPE DUST.

Called by users "THE GREAT MILDEW DESTROYER," a fungicide for MILDEW AND ROT either indoors or out, on ROSES, GRAPES, GOOSEBERRIES, POTATOES, PINKS, PEARS, etc.; a powder possessing great diffusibility and thoroughly effective. Also useful in destroying many insects.

Put up in Packages of 5 and 10 lbs. in barrels; Kegs, in bulk 100 lbs.; Barrel 200 lbs.

SCROFULARIA

Roots Carpet Bugs. A Compound Powder effective against Moth, Roaches, Bed Bugs, etc. After two years' use, so far as we can learn, wherever used against the larva of the CARPET BEETLE or so-called BUFFALO MOTH. NO DAMAGE has come to either carpets, furs or woollens. The value as a destructive agent of this powder against all sorts of insects, excepting scale, is great.

Put up in Packages retailing for 25 cents, 50 cents and \$1.00 each. Also in cans, boxes and barrels, bulk.

For Pamphlet or Sample, address: "SLUG SHOT," FISHKILL-ON-THE-HUDSON, N. Y.

THESE GOODS ARE SOLD BY THE SEED TRADE OF AMERICA.

VERBENAS THAT NEVER KNEW RUST.

All new varieties of 1888, the extra choice of many hundred select Seedlings. Thirty-five distinct best colors shades of Scarlet, Red and Pink predominate. Robust, healthy growers, forming plants rapidly. ROOTED CUTTINGS, 5 of each, \$1 60. In mixture, 75c. per 100, \$3.50 per 500.

SEEDLINGS of my superb strain, 50 cents per 100, \$2.00 per 500.

PANSIES, in unexcelled mixture of all notable strains, from seed of my own growing. Cold Frame and Winter grown plants. Let me price your orders.

Daniel K. Herr, Lancaster, Pa.

R. S. BROWN & SON

The New York Orchid Show.

Siebrecht & Wadley held their third annual orchid show in its previous home, the Eden Musee, opening on February 27. It had been arranged for an earlier date, but Mr. Siebrecht's absence in Trinidad caused some delay.

It is a difficult matter to arrange a show of similar character year after year, and yet present new features, but so far each orchid show has been distinct in character and arrangement. However, this year's exhibition may justly be considered the most tasteful and gracefully arranged we have yet seen; it was really charming, and some of the plants shown were of unusual interest.

The most unique oddity present was *Cœlogyne pandurata*, the property of Siebrecht & Wadley. This plant has rarely been flowered in this country, and is comparatively unknown to many. The flowers are large, petals and sepals light green; an extraordinary lip is greenish-yellow, warted and marked with large black veins terminating in a broad black blotch, the disk is covered with large warts.

A decided contrast to the oddity of this plant was the other "star" of the show. Mr. W. H. De Forrest's white *Cattleya Trianae*. This was mentioned as the most costly plant in the show, being valued at \$1,000; it was certainly the most beautiful. It was a large piece, bearing thirteen flowers, a number having been cut. Bloom clear white, with yellow throat. Evidently a strong variety, the bloom being of better substance than in the case of many albinos; certainly the beauty of the plant was beyond all words. Another fine specimen belonging to Mr. De Forrest was a very large *Cattleya Trianae* bearing 39 flowers; a very beautiful plant. Both these *Cattleyas* were imported last spring by F. Mau.

The largest display was of course from Rose Hill Nurseries; next in size was the exhibit from the United States Nurseries, which extended down one side of the hall. Other exhibitors were Messrs. Kimball, of Rochester, Matthews, of Utica, F. Mau, of Weehawken, Eyerman, of Easton, Pa., Lockwood, of Stamford, Conn., and Burroughs, of Fishkill.

The general arrangement consisted of the usual border down each side, while on the main floor were seven tables or groups, three on each side, and a long irregular plateau in the center. On the right side recesses were formed, backed with foliage plants, and chiefly filled with orchids. The largest recess on this side was especially charming. The mirror at the back was covered, all but a narrow space, with standing pine, making a good background for *Oncidium varicosum*. The recess contained *lycastes*, *Cœlogyne cristata*, a few *Cattleyas* and

anthuriums. A few *nepenthes* hung above; at one side were a few *cyclamens*, at the other Mr. De Forrest's white *Trianae*. Next was the large *Trianae* from the same place, familiarly called the Kent Square Nurseries' baby. Next to this was a most charming recess filled with plants from F. Mau, of Weehawken. A specimen of *Oncidium sarcodes* with its showy flowers stood in one corner, fine *O. varicosum* hung at one side, while above were plants of *Odontoglossum citrosimum* with long pendant spikes. Several plants of *Calanthe vestita gigantea* in this lot were especially fine, and so were the *Cattleya Trianae*; in cut bloom Mr. Mau exhibited 50 distinct varieties of *Trianae*, and not a poor one in the lot.

The opposite side was taken up by the United States Nurseries, *cyclamens*, *Primula obconica* and *cypripediums*. They formed three very tasteful groups; the *cypripedes* were especially well arranged; they displayed eighty varieties of this orchid. Specially worthy of note were *C. Dayanum*, *C. Leeaunum superbum*, *C. Chantlinii* (very fine), *C. uitens* and *C. ænanthum superbum*. Among their cut flowers were some blooms of that singular form of *C. insigne*, in which the lip is corrugated. Hung above the *cypripedes* were many *phalaenopsis*, both *grandiflora* and *Schilleriana*, bearing fine spikes. A big *Adiantum Farleyense* was also from the United States Nurseries.

The groups in the center of the hall each consisted of some large palms with smaller plants or cut flowers arranged about its base. The United States Nurseries occupied space on some of these groups with a general collection, among them were *Masdevallias Harryana*, *triangularis* and *nycterina*; *Lycaste Skinnerii* and *Skinnerii alba* very good, *Odontoglossum crispum* and *Rossii majus*; *Oncidium Cavendishii* and *Kramerii*. Among their cut flowers was a white *Cattleya Trianae* and a very good one.

Mr. Eyerman's cut flowers formed one group, his *cypripediums* were especially interesting. The beautiful Mrs. Canham was among them; also good flowers of *C. Selligerum*, *C. pleneum* and *C. venustum pardinum*. Among the *Cattleyas* in this group were fine forms of *Trianae*, *bogotensis*, *chocoensis* and *Schrederae*. Five varieties of *phalaenopsis* were in this group, namely, *amabilis*, *leucorrhoda*, *grandiflora*, *Schilleriana* and *Stuartiana*.

Mr. Kimball's display of cut flowers showed its usual number of good things; the charming *Zygopetalum Mackayii* was among them, and there were some fine *cypripedes*; *leucorrhodum*, *hirsutissimum* and *euryandrum* were especially good. There were ten *dendrobies* in this group, *chrysotoxum* and *Leechianum* being especially attractive. Among *Cattleyas* there was, of course, a white

Trianae; very good speciosissima and maxima. Mr. Kimball's collection embraced some seventy-five varieties.

Wm. Matthews, of Utica, sent some good cut blooms, which were arranged in a pretty group.

The central plateau, filled with plants from Rose Hill, formed the handsomest group in the room. It can't be very accurately described, because it did not look as if it had been regularly arranged, seemed as if the plants must have grown there. It was a long irregular oval, some straggling rustic branches were in the middle; irregular uprights at the end supported other branches, and these were all hung with plants. Quantities of dendrobes, good noble and Wardianum; buff Epidendrum Stamfordianum, which is not very much grown; oncidiums and odontoglossums and almost everything else. Below were quantities of cattleyas, lycastes and, in fact, a general collection. The arrangement of this group can not be too highly praised; it was done with an apparent carelessness that was the perfection of good taste. Some masses of bougainvillea were put at either end; a lot of this plant was used about the hall, being put wherever it would prove effective. In front of the music platform were two big tree ferns; on one of them hung a good plant of Dendrobium Ainsworthii. Between these ferns was a case in which reposed the Coelogyne pandurata, a very good plant of Cypripedium hirsutissimum and some other nice things. Among them were two new ferns, of which great things are promised. Adiantum rhodophyllum and A. reginum. Both have somewhat the character of Farleyense, but are hardier and deeper in color; the first named has a beautiful red tinge on the young fronds. Good exhibition ferns one would think.

A most beautiful thing received towards the end of the show was the white Lælia anceps (cut flowers). The petals and sepals were pure white, the lips also; the throat was yellow, veined with dark red. A very handsome thing.

Mr. Burroughs, of Fishkill, showed some seedling carnations, among them was a most attractive scarlet as yet unnamed. It is a seedling from Buttercup and Portia, giving the bright scarlet of the latter with the large round flower of the former. A very promising infant.

Mr. Lockwood showed a single plant of Odontoglossum crispum worthy of special honor—a very fine flower.

An odd-looking flower, a novelty to most people, was the Bottle Brush; it is quite an old thing, but rarely seen. The flower is exactly like a bottle brush, bright crimson in color. This was exhibited by John Ryan, gardener to St. John's College, Fordham.

A good many decorative plants were used, together with the orchids, so that the hall was well filled. As far as actual prettiness goes, it was the most attractive show we have had yet, and it reflects great credit on its energetic promoters.

EMILY LOUISE TAPLIN.

Problems for That Committee on Nomenclature.

Why should the "Chinese Yam" be changed into a "Cinnamon Vine" and offered to the public at 25 cents each when its value should approximate that of its first cousin, the Sweet Potato—say \$1.50 per bushel.

What is the "Vegetable Peach?" that is, what is its correct name?

NOMENCLATURE.

Notes on Varieties.

To-day I send you by express a few carnation flowers and it will be a matter of some interest to know if they arrive in fair condition and how these varieties grown in light New Jersey soil compare with the western product. Each variety is accompanied by a few of its own shoots, which show as great a diversity of color and habit as do the flowers.

First I will speak of Grace Wilder. This lovely pink variety has become a great favorite, and its popularity increases year by year immensely. With me the question is how to get enough of it; as will be seen by the growth and flowers I send, there is nothing delicate or puny about this sort, but on the contrary it is a bold vigorous grower, requiring perhaps at the outset a little care, but when once started it keeps pace with the best; plants that I set out for my own flowering are always grown in thumb pots and any that show signs of disease are discarded.

Hinze's White:—I have always regarded this more as a fancy than as a white variety, although if the flowers are allowed to remain long enough on the plants they generally become white enough for any purpose. The flowers I send you to day are from a house that has been quite cool all winter, 50° being the maximum, and you will notice that some are a pretty good white, while some are cream color and others tinged with pink; the first have been longest open, next the creamy ones, while those tinged with pink are the least developed, and none of them were fit to gather; even those most developed and whitest should have been allowed to remain on the plants for two or three days longer, in which case they would have been a much purer white as well as a great deal larger, for though the flowers sent are a fair size yet they are small compared to many that I gather, as the bunch was rather intended to illustrate my subject than for exhibition. Early in October, 1887, I put in a lot of cuttings of this variety, and when rooted they were put into small pots and from the small pots into larger (4½-inch) ones; on the 6th of last April they were planted nine inches apart in a cold frame previously prepared for them and protected with sash during nights and cold days for a short time. I gathered the first flowers on the 20th of June and they flowered from that time right into August; the flower stems were cut off soon afterwards, and about September 20 the plants were removed to a bench inside and the flowers sent to your office to-day are from the same plants. I have several hundred plants in half pint pots now ready for the same process soon as spring opens. I found it a first rate investment, and in addition I will say that these outside grown Hinze's White were pure white, that is in my estimation they were white enough for any purpose, being used in my business in all cases where such were needed.

Buttercup:—I have often thought that if I could only grow one carnation that this would be my choice, and if you could see the bunch of flowers I send to-day as it went into the box I believe you would

in a measure agree with me. I was much amused when I came to the conclusion of Mr. D. M. Reichard's instructive remarks (FLORIST Feb. 1), where he says that Buttercup is "valuable only as a pot plant, producing its flowers too sparsely to be of value for cutting." I can assure Mr. Reichard and others that Buttercup is by far the strongest and most vigorous grower of any carnation that I handle, in fact it makes such strong heavy sappy shoots that it is difficult to get shoots of a suitable size for cuttings, and I presume this must be the case with others, as I notice that the advertised price of this variety is generally twice and a half or three times the price of other established sorts. With me Buttercup is an immense grower and a most prolific flowerer and so satisfactory in every way that the trade will not suffer while expecting a better.

Frederick Johnson:—Three years ago I grew some plants of Grace Fardon. In the field they did well and made fine large bushy plants, but after being planted inside and about the time they began to flower they also began to die, and they kept on dying, a piece at a time until but little was left of them; when about midwinter it was necessary for me to pull them up and consign them to the rubbish heap; the variety seems to have descended from the old La Purite, and like that good old sort seems to have inherited its failings. But with Frederick Johnson, however, things are different, it is about the same shade of deep rich pink so desirable in Grace Fardon, but it is a strong, clean, vigorous grower without spot or blemish; the flowers are a good size and produced in great abundance, and it will flower early and late same as Grace Wilder. Any brother florists who have suffered the difficulty with Grace Fardon above mentioned will find it to their advantage to try Fred Johnson.

Florence:—This variety came to me highly recommended last year and I like it for its distinct shade of red, being a sort of happy medium between a deep pink and bright scarlet which blends charmingly with the other colors. The flowers are medium to large, deeply fringed and fragrant, the plant is a good grower and profuse flowerer.

Glowing Coal, or Portia, as some growers claim it to be, is in my opinion the scarlet of scarlets, and for size, brilliancy, length of stem, fragrance, perfect growth, continuous bloom and every other desirable quality that we expect in a bright and glowing carnation, is condensed in this one, and until a better one comes in everything that can be desired.

In concluding these remarks I may say that I grow several other varieties of carnations, but the above form by far the greater part that I depend upon for flowers for the supply of my local business.

H. E. CHITTY.

Patersou, N. J., March 5.

[The blooms sent consisted of a large bunch of each variety noted, all on long stems and for quality it is doubtful if they could be surpassed. The clean, strong, handsome foliage added not a little to their beauty. The bunch of Buttercup was particularly fine, the best blooms of this variety we have ever seen. The stems and foliage were very strong and vigorous showing that the plant is certainly a very vigorous grower with Mr. Chitty. The specimens of Grace Wilder were very deep in color with hardly a trace of the washiness which so frequently detracts from its value. The

A PEEP AT THE ORCHID SHOW.

blooms of Fred Johuson excited instant admiration. If all can grow them to the same perfection we need look no further for a better carnation of its color. The peculiarities of Hinze's White noted by Mr. C. were plainly observable in the bunch of blooms sent, which were also extra well done. The flowers arrived in most excellent condition, showing apparently no effect whatever from their two days journey, which goes to show that Mr. Chitty in addition to knowing how to grow good flowers knows how to pack them for shipment, an accomplishment not as common as it might be, judging from the condition in which many of the flowers arrive which are sent to us for comment.—ED.]

New Carnations.

Mr. Isaac Larkiu, Toughkenamon, Pa., sends us blooms of his seedling carnations.

Morning Ray is a very handsome deep pink flower of good form and substance, the specimens sent being on stems of generous length. The petals are fringed and the flower strongly fragrant. Mr. Larkiu states that it is a very early bloomer; Eclipse is a dark crimson; Amy, white lightly penciled with purplish crimson; Mrs. Benj. Harrison, red, described as an excellent bloomer, with many long stems; Lady Rachel, purplish crimson, of good size and form, striking color, and fragrant, described as a very early bloomer.

Several unnamed seedlings were also enclosed. One is a light yellow ground heavily penciled with carmine, another buff penciled with crimson, a third light red and still another light red.

Vinca Rosea.

Many a time I have been wondering why this beautiful everblooming plant is not more generally grown for bedding purposes. I am sure we can produce them as cheaply as geraniums and they should sell readily in quantity if they were only offered. We plant a little bed of them nearly every year and it always gives us the best satisfaction, being in

bloom from the time of planting until frost kills them.

They can stand the heat and dry weather better than most plants and are not injured by wet seasons as long as the soil is loose and the bed well drained, nor does the strongest wind do any damage to them, because there are no straggling branches to be broken off and whipped about by the storm, the plants all growing an even height and forming a compact mass of green, white and rose or red. Even as a border plant, planted singly, the growth remains compact and staking or tying is unnecessary. The flowers are produced freely by all three varieties and I should hesitate to discard either one of them; they are all good and we can not do without them. I have planted them with good effect in long ribbon borders and also in designed beds together with coleus, achyranthes, centaureas, variegated stevia, etc., keeping the colors separate.

If the plants are grown in $3\frac{1}{2}$ or 4-inch pots with three or four branches we can get a better price for them than we do for a good geranium in the same pot, although the latter plant may be twice as large. Many private people are tired of geraniums and coleus and would like a change; they probably have never seen the vincas, but if offered would be glad to take them, provided we can assure satisfaction, and this we may safely do in every case where the bed to be planted is not situated in a densely shaded place, but wherever geraniums will flower the vinca will surely do admirably. Certainly vincas do not possess the gay and dazzling colors we admire in geraniums, but those softer shades peculiar to them are not objected to by anybody, they are not dull colors. I do not mean to say that we could sell as many of them as we do geraniums, or that vincas should take the place of geraniums as a bedding plant, but for variety or as a change it seems to me just the right thing.

To grow good strong plants it is preferable to sow the seeds not later than October and plant singly in thumb pots, repotting afterwards as they may require. When three or four inches high we pinch out the tops to induce them to break out

and get brauchy. In a temperature of 50° to 60° in winter they will do well and make nice plants by the time spring sales commence, attracting the attention of buyers by the flowers as well as by the dark glossy foliage and clean appearance of the whole plant. Propagation by cuttings is practiced in some places and where enough stock plants are kept, this way answers just as well, but we had rather sow the seed and do away with the extra labor of making and attending to the cuttings. The young seedlings are liable to damping off if kept in a close house, therefore as soon as the little plants are above ground we place the box containing them in an airy position near the light and pot off when large enough using a rather sandy soil for the first, afterwards when the plants are well established in the thumb pots repotting into larger sizes and into stiffer soil. Wintering the plants in cool houses will delay growth and late seedlings also will be behind time, in this case it may be necessary to use a hotbed by the first of April or sooner to advance growth and get them to bloom in time, but the plants under such treatment are liable to draw and be rather soft to withstand the changes of the atmosphere when planted out.

JOHN B. KELLER.

Rochester, N. Y.

Forcing Bulbs.

"Which of the bulbs after being forced are worth keeping?" asks "A. S." p. 280.

That depends on a good many things. If you are a commercial florist growing cut flowers for the wholesale trade, I believe the best thing for you to do with Roman and Dutch hyacinths, tulips, narcissus of sorts, lily of the valley, as soon as you have gathered the flowers is to dump the bulbs into the rot pile. If you are a private grower you may keep them growing as long as you can after securing the flowers, then dry off the bulbs and keep them dry till next fall when you may plant them out, and in this way secure a few indifferent flowers. But I would even then hesitate to keep over Roman hyacinths, as they often are infested with bulb mites that spread to narcissus, eucharis, ciniums and others.

In the case of lilies opinions differ. I keep mine—especially *L. Harrisii*—over, and by not forcing them for very early flowers, get good flowers year after year and an increase of stock beside. The disease has struck my home-grown candidum lilies, and this being the case I dump them out every year. Well, but if you get a fresh clean stock don't you think you could keep them over successfully? some may ask. No, I have tried it and failed. Perhaps after a few years' time the disease may pass away. It is odd but true that this lily disease is far less virulent in the case of pot grown plants than in that of those grown in the open ground. Questions, of soil, drainage, manures, protection in summer or winter may suggest themselves; all of these I have considered carefully and practically and still the disease is master of the situation.

Freesias should always be kept over. They can be forced year after year and at the same time multiply exceedingly. *Allium Neapolitanum*, a lovely white flowered species, is also as accommodating, but always a homely looking plant. *Ornithogalum Arabicum* also does well when kept over. *Ixias*, *sparaxis* and *babianas* have got to be kept along year after year for the winter months are their proper season of blooming; but I ques-

tion if they would pay the commercial cut flower grower. Lachenalias too, except that they are vastly more accommodating and multiply more numerous, and while of little good for florists' flowers make handsome decorative plants for hanging baskets.

Then the host of winter blooming amaryllises and nerines submit freely to vigorous forcing year after year providing they otherwise get judicious treatment. Evergreen bulbous plants like eucharis and *Pancratium ovatum*, of course require indoor and perennial greenhouse care and can be forced into bloom with apparent impunity.

Then we have many tuberous and otherwise thick rooted plants that we keep along year after year. Among these are cyclamen so gay from December till April, gloxinias all the year round but with most difficulty in winter, tuberous rooted begonias at any time according to treatment, but with less favor in winter and most convenience in summer. Achimenes, gesneras, caladiums, etc. extend this section. W. F.

Essential Points in Chrysanthemum Culture.

Pot Culture.—How to produce finely formed chrysanthemum bushes and splendid flowers upon the same? is the question uppermost in the minds of many in the profession; and it is hoped that this paper may bring to mind a few things essential to the production of fine plants.

The ideal plant in this country and the standard at our exhibitions is what is popularly known as the bush plant. This is supposed to be anywhere from two and a half to four feet in diameter, of nice contour and each branch terminated with a good sized finely formed flower. Your essayist will treat of pot culture believing that by this method finer flowers and better results can be obtained than by growing in the open ground and lifting as the season of flowering approaches.

Cuttings should be selected from strong healthy plants that have enjoyed a season of rest immediately following their flowering. Plants propagated from plants thus treated assure us a more vigorous and healthy growth. Root the cuttings in a moderately cool house and place in 2½-inch pots as soon as sufficient roots are formed. Place the newly potted plants in a nice snug position and as close to the glass as possible; the temperature of the house should be kept at 48° Fahrenheit at night; if kept too cool growth is arrested and a check to the plant ensues. Plants where sufficient air is denied them and when placed too far from the glass are apt to become weakened in growth.

An important question frequently asked is, when to repot? the answer is: when ever the ball or pot becomes well filled with nice working roots; do not allow the plants to become pot bound. Supposing the cuttings to have been potted off in February the next shift will be from the 2½-inch pots to 4-inch; this will probably require to be done the end of March. If the plants have progressed

nically the next shift will be into 6 inch pots, and this will need attending to early in May. It is advisable to replace again in the house for a few days, at least until root action commences, when if danger of frost is past they may be placed in the open air in a place suitably provided for them.

The summer quarters should be a nice level piece of ground arranged so that surface water from summer showers will readily pass away. Care should be taken not to set the pots in immediate contact with the earth else earth worms will find their way into the pots to the detriment of the plants. Some use boards for placing the pots on; others set upon pieces of slate, but perhaps the better method is to set the pots upon a bed of coal ashes; these prevent the ingress of worms and also allow the water to pass away freely. Set the plants in rows with aisles between each third row, making it wide enough to allow a man space to work in and to water. In no case crowd the plants, but set them far enough apart so that air and sunlight may have free circulation around each plant. When plants are thus set exposure to the sun's rays and drying winds necessitates frequent waterings on hot days or windy weather; to prevent trouble from excessive evaporation it is advisable to surround the pots with refuse hops or leaves.

Gause or other shading used judiciously is certainly beneficial in midsummer, but care must be taken to remove the same on the occurrence of wet and cloudy days else black mildew and rust are sure to make their appearance when thus neglected. To return to the matter of potting; shift from 6-inch into 8-inch pots when ever the soil is filled up with nice working roots, and give the final shift into the pots it is intended to exhibit in not later than August 1. Size and other considerations will determine the size suitable for the last shift.

Soil: One half nice fibrous loam (rotted sod), one fourth leaf mould, one fourth old thoroughly rotted manure, constitute an excellent compost for the growth of chrysanthemums, the above would be still better by having four quarts of pure bone flour to every six bushels of compost.

Pinching out the points of growth and tying the young shoots are co-related and must be conducted systematically and in unison. The grower must first fix in his mind the kind of plants he desires to grow, and then it is a simple matter to form and construct the plant as it develops and grows. If bushy plants are desired the tender shoots must be carefully tied down, before the growth matures sufficiently to become brittle, when it breaks easily. In tying care should be used so that the loop that holds the branch in position be not so tight that it cannot move with the rapid growth as it progresses. Simple wire hoops fastened to sticks serve admirably for tying the shoots to where a spreading bushy plant is desired; there may be three or more of these to each plant, thus giving a nice contour to the bush, they may be removed when staged for exhibition. The last pinch should not occur later than the first of August if the plants are desired for exhibiting by November 10 or thereabouts.

Disbudding: When finely formed flowers of good size are desired all but the terminal or crown bud should be removed. This is best performed by using a pointed stick or penknife, care must be taken however else rough handling will destroy the work of months.

Feeding: Chrysanthemums and plants are like human beings; they can exist and flourish on some one or other staple food but a change of food is best and will bring with it surprising results. Use one week a very light dressing of fine old cow manure well pulverized, the next week use liquid manure and so on. Feed commences after the buds are set, and the interested and observant grower can readily judge the quantity and time to apply the stimulant. Soot water may be used with advantage throughout the whole season—at intervals, and with beneficial results. Removing suckers from the plants should be performed carefully so that the surface roots may not be injured or torn.

Watering: This is perhaps the most important matter incident to success in chrysanthemum growing. It is best that one man be entrusted this task as he—if a little observant—will soon find out the nature and requirements of the different varieties. Some varieties require much more water than others, and this fact soon becomes apparent to one who is entrusted with their keeping. An interest in the final outcome—say one-fourth of the prize money—will wonderfully quicken and energize the man in charge, and many of the successful ones attribute not a little of their success to this feature. If the plants suffer for water and their foliage wilts from inattention, every occurrence of the kind militates against your success; hence the importance of careful, judicious watering.

For the black aphid use either tobacco water, or tobacco powder; moderate applications systematically used will rid the plants of the pest. Sulphur dusted on foliage will check and eradicate mildew.

Remove the plants from the open as soon as danger from frost occurs but use only sufficient heat to keep the frost out of the house in which they are placed, taking the precaution to give plenty of air even on cloudy and wet days. Improvised structures covered with cheap or oiled muslin with a temporary steam or hot water pipe running through the structure—in case of necessity—will answer every purpose and is often preferable to placing the plants under glass. Getting the plants to the show in good condition and getting the premiums are the two very interesting items in the history of him who grows chrysanthemums for exhibition.

[Read before the Society of Indiana Florists, Indianapolis, Feb. 22, by E. G. Hull, Richmond, Ind.]

Seedling Chrysanthemum.

I send you some blooms of a chrysanthemum which I raised from seed in 1887. The plant began to bloom in September 1888 and continued to bloom to the present time. Every branch makes such flowers as I send you. I have been unable to propagate any stock from it, owing to its continued blooming. I think it will be very valuable for cut flowers, as it is a good selling color.

Louisville, Ky.

ED. MORAT.

[The blooms sent were of a bright yellow, very similar to *Gloriosum*, and one bloom nearly equaled the flowers of that variety in size. If it retains the continual blooming qualities related by Mr. Morat it should prove valuable to the cut flower grower. Of course time alone will demonstrate this point.—ED.]

Ismene Calythema.

Your correspondent who wants to get a picture of *Ismene calythema* reminds

MANTEL BANKED WITH PLANTS. PLATE NO. 1.

me to remark that this plant seems to be more scarce than formerly. It has been our experience that most of the bulbs sold as *Ismene calythemata* are really *Ismene undulata*, which is practically a worthless plant although the bulb is identical. *Ismene calythemata* is a valuable plant and blooms much freer than the others. The flowers are large, well formed and of good substance; makes a fine bulb to bed out to bloom. If inside it is a valuable flower for cut flower purposes.

Many years ago we used to sell what we supposed to be *Ismene calythemata* but after a while we learned we were selling the wrong thing. Since then I believe we have got it out of our list entirely, as we have only been able to get a few bulbs. A couple of years ago we imported several hundred at least from a very reliable house, but at least 50 per cent of these were wrong. I mention this to show how mistakes or lack of knowledge can run for years without being detected. I will

say this also, that during the time that we sold *Ismene undulata* for *calythemata*, we never had one complaint that they were the wrong thing.

If I run across a print of this plant I will send it to your correspondent.

Queens, N. Y. E. V. HALLOCK.

Mantels Banked With Plants.

We give herewith two illustrations of mantels banked with plants, from photographs sent us by Mr. J. M. Gasser, Cleveland, O. Both decorations were arranged for the wedding of his daughter, which occurred a few months since.

In plate No. 1 the plants are principally Rex begonias, marantas, dracaenas and small palms, with larger palms on the floor below.

On the mantel shown in plate No. 2 mainly adiantum ferns are used with vases of cut bloom. The adiantums do not show up well in the plate; being so

delicate the slightest breath of air or jar moves them and blurs when photographed.

Begonia Semperflorens Gigantea Rosea.

This is undoubtedly one of the best, if not the very best, of all the winter blooming begonias. I have had it now for three years, it gives better trusses, more of them and has a better color than any of the others and is very useful for table decorations.

The only drawback I see is its tendency to grow tall. To overcome this I start my cuttings late in spring, keep them in 3-inch pots all summer and in September shift them into 5 and 6-inch pots. I use the heaviest kind of soil, one half decayed sod and the other half yellow loam. None of my plants are over eighteen inches to two feet high and are literally covered with flowers. With other florists I have seen this begonia (grown in lighter

soil) four feet and over in height, slim and unsightly. Old plants are useless.
Pittsburg. GEO. DOERR.

Wood Lice in Rose Beds.

E. D. can capture the wood lice by taking some 4-inch flower pots, placing a little hay in the bottom of each and setting them inverted at intervals on his beds. The wood lice will go into the pot above the hay. Go round each morning with a pail of water, take the pots one by one, remove the hay holding over the water and give the pot a gentle tap against the inside of the pail. By following up these instructions thousands can be caught and if persisted in they will be soon exterminated.

Riverside, Ill. THOS. EVANS.

Number of Buds Produced by Certain Varieties.

Will some of the rose growers when telling how to grow roses also give the number of buds cut from a certain number of plants of the different kinds. An advertisement in the last number giving buds cut each day suggests a matter to be discussed along with steam and hot water.

Q. U. ALITY AND Q. U. ANITY.

[The suggestion is a good one. If we could secure accurate records from a goodly number of growers an average could be secured which would be of great value in determining the cost of production, of which as yet we have no positive data.—ED.]

English and American Rose Growers.

Mr. A. H. Ewing, Toronto, Ont., writes as follows: "Last month I sent to my brother (a nurseryman and florist in the south of England) a description of the American method of forcing roses with a plan of some houses I had seen. I also sent him the AMERICAN FLORIST of December 1, 1888, drawing his attention to a paragraph therein signed by one Fred Moore. The following is a copy of the reply received and which he says I can send to the FLORIST as a reply to Fred Moore's letter on page 184:"

SEA VIEW NURSERIES, HAVANT, Dec. 30, '88:—Many thanks for your letter of the 13 inst., containing particulars of an American plan of forcing roses. The plan is not altogether new to me as it was described to me three or four years ago by an American nurseryman and I have often thought that if I ever went specially into the forcing of rose blooms I would try it, but the cut flower trade is not exactly in my line—my business is to propagate, grow and sell the plants and to produce the maximum result at the minimum expense. Of course the plants before they are sold produce at times immense quantities of flowers which so far as possible I turn into money. I do not know if the American plan which you describe would answer in the short days in England. We are above the 50th parallel of latitude, you are about the 44th, or over 400 miles closer to the equator, and New York is about the 41st parallel or about 600 miles closer to the equator than we are and we have a more cloudy sky than you. As far as heat goes there is no difficulty, but to increase the intensity of light is beyond us. Our days are shorter in winter, sky more cloudy and sun lower than with you, this may make a difference. Many of the large London market growers are self made men and extraordinarily successful; probably not only the American plan, but many

others, Belgian, French, Dutch, Japanese, etc., have been tried, but in such tremendously fierce competition as they have to face only the fittest ways and the fittest men for the purpose can survive long. They have no aid from protection as I suppose their American brethren in the same line have. The south of France where roses and oranges bloom in the open air at Christmas is only a day and a half or two days at most off.

Cut flowers not being specially in my line I have never visited the establishments of any of the big market growers of cut flowers but have often read descriptions of their places as well as come into contact with those who know them well. With regard to "Perle des Jardins" rose, it is I believe a good deal grown for cut bloom, but the yellow rose grown in the most enormous quantities all over England is "Marechal Niel." There is a plant in Havant which produces from 2,000 to 3,000 blooms per annum, and from this single plant I believe from 100 to 200 are sometimes cut during its time of blooming in one day. In July—the time when the writer in the FLORIST says he could not see 200 Perle des Jardins buds in Covent Garden—is a time when roses are at their cheapest in England; but few are got from under glass at that time and last summer tea roses in the open air rotted on the plants from the unusual wet and cold, therefore tea rose blooms were scarce last summer, yet I expect if 2,000 had been wanted of Perle des Jardins instead of 200 they could have been had at short notice. The said writer says "they graft nearly all their roses on the Manetti stock." This is wrong with regard to teas, which when grafted are usually put on the seedling brier, but the "Griffrale" is also used, the Manetti hardly at all for teas. Hybrid perpetuals when grafted are usually grafted on Manetti. Jackman strikes teas largely on their own roots for pot sale and as I believe do some of the market growers. Teas are also being very largely grown now by being budded out of doors on seedling or cutting brier (Dog Rose). Teas stand out all winter here without injury. We graft all through the winter in heat, but in the open ground during summer and put in cuttings on a border out doors in early autumn.

If any one will come this way and tell me how I can improve my methods I should be very pleased to give him respectful attention whether he were a Yankee, Dutchman or Hottentot, but if he simply showed that he knew much less of the matter than I did I might say something uncomplimentary and send him away with a "flea in his ear" and then when he got home he might write to his pet paper and say I was behind the times. It is impossible satisfactorily to compare English and American florists and nurserymen, the circumstances of climate and latitude are so entirely different that many of their methods must be different also, and it is not only in horticulture that vast differences exist.

J. E. EWING.

I INTEND fitting up a rose house the coming season. One bed is to be planted with American Beauty. Will rose growers kindly inform me what other two varieties will do best in the same house? Can any other rose be grown in the same house with the Beauty and best success be attained? How about La France?

WISCONSIN.

THE JOURNAL DES ROSES publishes with its December issue a colored plate of the new tea rose Madame Philemon Cochet. As shown in the plate the rose is of good size, a delicate shade of rose pink in color.

Seasonable Hints.

Now that the sun is gaining in power, air should be admitted more freely and the syringe used liberally in all plant houses.

Rose benches should have a top dressing of cow manure—it is safer than if applied in liquid form. I have always top-dressed as above along about this time, but this season, instead of cow manure I have used guano mixed with fine soil and scattered over the beds about every two weeks, the result has been highly satisfactory.

Chrysanthemums may be propagated this month; except however for getting them out of the way before the rush of spring work is upon us, they are quite as well left until middle of March.

Fuchsias struck in December and spring stock of geraniums should have their final potting.

A batch of H. P. and tea roses, dormant through the winter, should now be moved along.

Every florist should handle a few gloxinias; tubers may be started at once, or seed sown now will give a batch of plants to bloom next summer, and if customers won't buy them, they will be none the less a delight to ourselves.

Lilies, astilbe, hydrangeas, etc. for Easter use ought now to be pushed ahead. Easter is late this year, but it is best to be a little ahead with things so as to allow a few days for hardening off stuff that has been forced.

Where it is desired to propagate dahlias by cuttings, the tubers should now be planted in a shallow bed, and watered freely. When the young shoots are two or three inches long cut them off and place in the cutting bed.

If not already attended to the stock of tea roses for next season should be propagated at once. Let the cutting bed for roses—and everything else—have a sunny position. Shade, when necessary, can always be supplied, but we can't manufacture sunlight.

Baltimore.

A. W. M.

Value of Exhibitions.

Opinions differ as to the value of floral exhibitions to the florist. Many do not appreciate their value and feel that if they are unable to carry off some of the first premiums it will not pay them to attend. "Why should I trouble myself?" they say. "It is of no benefit to me. I can not compete with them, they have too much advantage over me." Others again are entirely indifferent to progress and the elevation of our business, and some are blinded by envy and jealousy; they cannot see any good in a public exhibition because they are afraid a neighbor may get ahead of them. Still others do not want to be burdened with the work arising from such an undertaking and simply stay at home.

First let us see as to the value of exhibitions to all in common, second to the individual exhibitor, and last as to the ability of any florist as an exhibitor.

When any progress, any achievements are made in any of the different trades, not only the individual but the whole craft is benefitted by it. Why not doubly so when their achievements are shown in a public exhibition open to the inspection of all. It shows those interested where they may improve and brings our goods prominently to the notice of those who are expected to buy, and this is especially necessary and desirable in our trade. Consider the progress made in our profession in the last decade and the improvement in taste which has accompanied it. See the improvement which has been made in one plant—the chrysanthemum. Would this have come to pass had it not been for the grand exhibitions of our products which have acquainted the public with our advance, and by bringing us into competition spurred us on to still greater achievements? Will any one say that the public taste has not been cultivated by viewing the best products of our skill. No less has been the benefit to ourselves by inspection of the result of others' work.

Was not our show of last fall an improvement on the one held the previous year? Does not that improvement show progress? When our success is heralded all over the country is it not of value to the whole trade? Have not the many flattering notices we have received and the prominence given our society raised us in the esteem of the public?

MANTEL BANKED WITH PLANTS. PLATE NO 2.

As to the benefit derived by the individual exhibitor, even those carrying off the first premiums may not receive adequate compensation for their labor, but the establishment of the fact that they have the best is worth much more. A point gained in honest competition is of great value and well worth the time and labor required. In addition to the pleasure of having your efforts crowned with success there is the rising esteem of your fellow men and an immediate beneficial influence on your business. I can not estimate the actual value to me of the prizes I have won at our exhibitions, but it was certainly very great, and plainly to be seen. You may have a better lot of plants in your greenhouses than those shown at an exhibition, that I may readily admit, but will the public in general do so too after you have neglected a chance to place them in competition. We can not all receive first premiums but nevertheless we can all share in the beneficent influence the exhibition exerts for the whole trade.

The main feature at our exhibitions has been the chrysanthemum. Is there one among you who will admit that he can not grow a chrysanthemum worthy of exhibiting? If you cannot devote the space necessary for specimen plants you can at least show specimen flowers and that the cut blooms are as much of an

attraction as the plants was fully shown at our last exhibition. What then should prevent you from taking an active part?

My brother florists let me entreat you to throw away all indifference, banish all jealousy, selfishness and envy, rouse yourself from your lethargy and fall in line in our onward march. We need your help and you cannot afford to be left in the rear.

[Extracts from a paper read before the Society of Indiana Florists at Indianapolis, Feb'y 22, by Fred. Dörner, La Fayette, Ind.]

Various Moon Flowers.

Of these plants there are several very distinct varieties both in manner of growth, color of flowers and desirability. Some are perennial, having tuberous roots, and when well established grow to immense size, proving a "joy forever" to the lucky owner. These can not be propagated from cuttings, but are increased from divisions of tubers. Blooms are in varied sizes and colors. I obtained from a far southern dealer six distinct varieties of these. Of one the foliage is as finely cut as a fern leaved geranium.

But the varieties of *Ipomæas* which command best sales and widest culture are those now known as "Moon flowers" or evening glories. Of these I know of two distinct varieties bearing white flowers, one variety with exquisite deep-toned

pink tubular shaped blooms. Of the white flowered varieties the seeds are so distinct as to have caused many to speak of them as the black seeded and white seeded. I believe that the real botanical name is shrouded in mystery, as some of our most prominent dealers to my certain knowledge, catalogue them variously *I. noctiphiton*, *I. noctiflora*, *I. grandiflora alba*, *I. Mexicana grandiflora alba*, etc., all claiming heirs to be the true variety. What they mean by true is a mystery, as all are true varieties, while it is an undisputed fact that one must be the superior variety over all the others.

Last season I grew in my grounds nine distinct varieties and feel bound to assert that the variety bearing white seed, no matter what is its true nomenclature, bears the palm over all those varieties I have seen in flower. I had 100 plants of the variety of "black seed" sent me as "Moon flower" and about twenty of that bearing "white seed." 'Tis said comparisons are odious, but "justice is justice for a' that," and I proceed to draw these same odious comparisons for the moon flower's sake. I found by comparison that the two were equally profuse bloomers, but the "black seed" variety was twice as vigorous a grower. The 100 plants I had nearly filled one of my largest beds, running on the ground and rooting the whole distance, full 50 to 60

feet, but there this superiority ceases. In the blooms of the "white seed" they had from one inch to two inches the advantage, full wide open, smooth and satiny in texture, with a long slender tube full five and six inches long, with a deep rich heavy jessamine fragrance, which at night made the air intoxicatingly sweet. The "black seed" had a shorter tube, smaller flower and no fragrance worth speaking of, whilst as the season advanced and abundance of bloom increased the size daily diminished until none ever measured over three and a half to four inches in diameter and the least breeze would tear the flower and split it up in three to five sections, which was not the case with the "white seeded" variety. To the last flower in November they remained a uniform size, full five and a half to six inches in diameter.

Of the "pink moon flower" which I grew for the first time last season and received under the name of *Ipomæa grandiflora rosea*, I can not speak in too high terms. This variety grows with equal rapidity with the white moon flower, but to me is far more beautiful in leaf growth which is, in shape, much like a grape, sub-divided, smooth on top, but under side covered with a profuse hair like growth with a roseate tinge. The vines are similarly covered which where it reaches the terminal flower shoot is exquisitely beautiful, a deep rose color. When the bloom opens, having hoped to see a flower similar in shape to the white moon flower, one suffers a keen disappointment which remains, however, only a short time, as it gains upon you each day; blooming in large clusters of one to six open at one time I think it more attractive than the single flower of the white. The seed germinates in a very short period of time, from five to ten days, while of the "white seed" planted March 10 some sprouted in August following. In writing about this pink moon flower Peter Henderson made a true remark that: "no matter how lovely it could not replace the white as an evening bloomer, for the reason it did not make the display, its color being against its showing at a distance." Both varieties open with me by 6 p. m. and remain open until 9 a. m. next day.

I am just as anxious to know its real name as others and will the coming season try to lay this question at rest by submitting a complete plant to a competent botanist. Awaiting their decision I will follow Mr. J. L. Child's example and call it "Giant Moon flower" or "*Ipomæa Childsii*," although I have no authority for thinking his "Giant Moon flower" is from the "white seed" instead of "black seed" only from his description fitting so exactly to the variety grown by me from "white seed."

MRS. J. S. R. THOMSON.

Spartanburg, S. C.

Catalogue Errors.

An examination of a batch of current catalogues shows a wide diversity in the spelling of many names of varieties, which is not only offensive to any one loving accuracy, but also confusing in many cases. Two notable instances of this may be found in "Hinze's White" carnation and "*Bouvardia Davisonii*"; both of these have been the subject of special corrections in the *FLORIST*, and yet they are misspelled oftener than not this year.

We have "standard" pots, and a good thing they are for all but the clams yet among us; why not have a "standard"

spelling? This is worthy the attention of the committee on nomenclature, or even a special committee less important and cumbersome.

In this connection, let me ask why the new rose apparently an "acquisition," and "filling a long felt want," is named *Souvenir de Wootton*? Isn't *Souvenir of Wootton* good enough for an American rose, sent out by an American, and named in honor of the princely courtesy of one of the grandest and most representative Americans of the day? And what is the French dragged in at all for, anyway? If the rose is a "go," it will be just plain "Wootton" in less than a year, and the daddy of it might just as well pull off the French handles he has tacked onto a good name, letting the rose go out as an honest American production.

J. HORACE MCFARLAND.

Harrisburg, Pa.

Standard Pots.

The adoption of a "standard" by the S. A. F. adds one more good thing to its list that the florists of this country have reason to be thankful for. Every progressive florist recognizes the advantages of a standard without being twice told. I have reasons to believe that the flower pots in Europe are hand-made at the present day, judging from the pots in which new varieties of plants and consequently very small plants are shipped over to this country in. We cannot hope to have any influence over the European flower pot manufacturer, but we can and should give the "potter" in this country to understand that we will use no other than the style and size adopted by the S. A. F. at the convention held last August in New York.

It seems to me that flower pot manufacturers are blind to their own interests in not at once adjusting their moulds or dies and machines to the making of standard pots. The patterns of the various sizes of pots made by the Whilldin Pottery Co. of this city, have been submitted to the committee appointed by the S. A. F. and have been approved and accepted by that body, but so far as I know no other pottery firm has done so. In making inquiries, for my own satisfaction, and getting samples of the standard pot from other manufacturers, I find they do not "nest" with those that the committee have accepted. It is due to the Syracuse Co. to say that the sample received from them, although a trifle smaller than the accepted standard, was the very best pot that I have seen.

It is necessary that samples of all the sizes be submitted by the various manufacturers to the committee, and receive its indorsement before they can be accepted as standard, for it is essential that they should be alike in every particular, or one of the main objects—that of uniformity in size—will be defeated. Philadelphia florists and those of neighboring cities are to be congratulated on having the only pottery company within easy shipping distance that has been equal to the occasion and has so far complied with the requirements, as laid down by the society. Manufacturers will be serving themselves well, in addition to the benefit it will be to their patrons, by falling in line as rapidly as possible.

The Society of American Florists would be continuing its good work by having a competitive exhibition of flower pots at the Buffalo meeting next August. Then the florists there assembled could judge for themselves, which potter made the best pots. This is respectfully submitted

to the attention of the executive committee, or the standing committee, or whatever committee may have such matters in charge.

Philadelphia. EDWIN LONSDALE.

Standard Pots.

Below we give the names of those who have up to date placed themselves on record as agreeing to buy "Standard" pots only in future. Send in your name to be added to the list.

Piping for Steam.

On page 314 "E" asks how to pipe for steam heating a greenhouse 100 feet long, with a grade of about 2 feet 8 inches running up from the boiler.

He does not give the width of the house, but presuming it is a wide house, it can be done in two ways. In the first the supply pipe from the boiler should be carried perpendicularly to a height corresponding to the highest point of the end of the house next the boiler, then running into the house three inches below the ridge, suspend to the ridge pole and run the pipe to the opposite end of the house, giving a fall of one inch in ten feet; at a point directly over the end of the middle table, connect a one inch pipe, carrying it down and under the table, back to the boiler end of the house and connect with the return pipe; returning to the upper pipe, carry it perpendicularly to the desired height above the walk, then across it and dropping down to the front of the end table, (as shown in Fig. 1), and connect with the pipes

Fig. 1.

under the side tables, the grade of the house giving all the fall required in returning.

This arrangement gives for the upper pipe an actual fall of about ten inches, but at the same time an apparent fall of 3 feet 6 inches. If this plan brings the lead pipe too low for the purposes "E" wishes to use the house he can connect a 1 inch drain pipe to and under the upper pipe just inside the door of the house, (care being taken not to screw the pipe above the inner surface of the T), if the door is in the way, with two angles carry this pipe across and down (as shown in Fig. 2), and connect with the return,

Fig. 2.

then run the upper pipe suspended 16 inches below the ridge the full length of the house and connecting with the lower pipes as shown in the cut on page 323, No. 62, of the FLORIST.

This plan is equally applicable to a narrow house with a walk in the center. St. Joseph, Mo. D. M. REICHARD.

Hot Water in Small Pipes.

I saw in a recent issue that some one wanted some information as regards small pipe; I will give my experience as best I can. I have four greenhouses, two 100x20, one 60x20 and one 35x10, and all but one are heated with small pipe. One house 100 x 20 is heated with 4-inch pipe, the rest are heated with 1 1/4-inch pipe. I am using hot water to heat with and where I am located I am unable to get very low with my boiler, which is one of Hitch-

ings' largest, on account of getting into water. My houses all run north and south with work shed at north end. In the house heated with 4-inch pipe, which is 100 x 20, I grow roses, and in one 100 x 20, carnations, in one 60 x 20, I grow mixed stuff, and in one 35 x 10, I force bulbs.

At the north end of the house I have a header which is of 2 inch pipe, laid on a level eight inches higher than the top of the boiler, from this I run 1 1/4 inch pipe to heat the houses in the following manner: Start from the header on the outside of the houses with my flow pipe keeping on the same level as the header until I reach the expansion tank, from there I drop under the flow pipe back to the return header which is 8 inches lower than the flow pipe and also 2 inches; then I run both a flow and return on the side of the walk next to the center bed, dropping the return below the flow from expansion tank same as on the outside, making eight runs of 1 1/4-inch pipe; four flow and four return in a house 100 x 20, and can maintain a temperature of 45° in a zero night. When I reach the return header it is carried on a small descent until it reaches the boiler where it drops to the bottom, a distance of only two feet.

I prefer the small pipe to the large as it takes up less room, can be put up easier and you can get just as much heat from small pipe with the same number of inches of radiation as you can from the large pipe and not have so much water to heat as when you use large pipe, and if you want any extra heat you can put in a run or so of small pipe at any time without any very great trouble or expense.

I grow all my plants on solid benches and have good success with them. I grow my bulbs on benches with bottom heat.

E. W. SMITH.

West Haven, Conn.

Capacity of Boilers.

I wish some one would rise and explain what a horse power is, or how we may know the capacity of our boilers. I have a boiler 3x12 feet with 26 2 1/2-inch flues. What is its capacity? How many feet of heating surface is required to constitute a horse power? I believe there are many florists like myself who would like information on this point.

GEO. M. KELLOGG.

Pleasant Hill, Mo.

[With steam boilers makers estimate from 12 to 15 square feet of heating surface to the horse power, but 15 feet is the safest estimate.—ED.]

Cleaning the Old Brick Flue.

In the columns of the FLORIST much has appeared on the subject of greenhouse heating by the steam and hot water systems, all of which may be very beneficial and entertaining to those who are using those methods or are contemplating putting them in in the near future. But I see comparatively little said about the old flue system, which we poor frontier fellows are obliged to use till we get up to where we can indulge in the luxury of steam or hot water.

I have hit upon a plan of building a flue that I have never seen used (although it may not be new), that has proven this winter to be the best for heating and the easiest cleaned of any I have ever tried or seen before. It consists of a furnace built at the north end of the house, 32 inches long, 15 inches wide and 20 inches from grate to top of arch; from this runs

a straight flue 8 x 14 to the south end of the house to the chimney built on the outside of the building. Opposite to where the flue enters the chimney I left a hole the size of the flue, into which bricks can be laid loosely so as to be easily removed.

When the flue needs cleaning I remove said bricks and having secured a stout smooth fence wire about 10 feet longer than the flue, on one end of it I bend a ring about 1½ inches in diameter and into this ring insert another short piece of wire six inches long with a ring on each end. At the other end of the long wire, about six feet from the end, I fasten a stout brush or limb that will go into the flue and following this a bunch or wad of old gunny sacks that will just go through the flue without pressing it too hard. I take this wire and pushing it through from the chimney towards the furnace the short link in the wire will drop down the incline into the furnace and can be readily caught and drawn through the furnace. The brush preceding the swabs of gunny sacks will sweep the sides and top clean and the drag will bring all the soot down into the furnace where it can be burned or taken out. The whole operation can be performed in ten minutes without removing a brick or disturbing the flue at all, and without getting the least dirty or begrimed with soot.

I have three flues built on this plan and alone can clean them effectually in 20 or 30 minutes. It can be done with quite a fire in the furnaces and still no gas escape in the houses, as the furnace doors being open the gas will come back and out of the door into the coal sheds. By the old return flues it took a half day to clean one and it was necessary to draw all the fire, and when through one was about the color of the inside of the flue himself. I give this for what it is worth, hoping it may prove of benefit to some one of the fraternity.

Larned, Kan.

W. T. JACKSON.

Anemone Jap. Alba (Honore Joubert).

We call it a hardy herbaceous plant, for it generally will live out and endure our severest winters, still if we should have an open winter and but little snow we had better cover the plants with some material to prevent alternate freezing and thawing too often, for by these sudden changes the roots will suffer and may be killed, although if only a very small portion of a root remains sound in the ground a plant will spring up from it and bear flowers the same year. The plants delight in a rich deep soil and will send up flower stems in great profusion, blooming from September until hard frost puts an end to them.

The pretty white flowers are very lasting and should be grown more generally by our florists. I have a row of them 300 feet long, giving us abundance of flowers, and yet we could dispose of a great many more if we had them. This row in October is a complete mass of white and will keep in bloom even after a sharp white frost. There is no difficulty in getting up a stock, for by cutting up a lot of roots any time in winter or early spring, spreading them out in boxes with an inch of soil for covering we can get any quantity of young plants. For our own planting we do not go to the trouble of potting off, because the little plants once established and growing are not easily killed and will take care of themselves under ordinary circumstances.

Those intended for sale are potted off and will have good tops on them in time to plant out. I prefer these potted plants for my trade, because people can see green leaves and life in them, while old roots dug up from out doors may make stronger plants the first season, but show no sign of life and we have often seen them rejected as half dead by people unacquainted with the habit of the plant. The flower stems are stout and stiff, very branchy and we are enabled to cut all flowers with long stems, the remaining side buds developing and their stems elongating again in a very short time and the plants thus continue to give us a new supply of flowers every few days. I do not know how long this renewing process would be kept up if frost did not put an end to it, but I know that every fall when hard frost sets in we have thousands of flower buds killed on the plants, which under more favorable circumstances would have developed into flowers and thus prolonged the flowering season perhaps two months longer.

These flowers are in growing demand for the last two years; made up in bunches of 25 or more, they sell well in florists' stores; they are of good substance, excellent keepers and do not soon drop the petals like other similar single flowers. They come in when flowers in general are rather scarce and will last until chrysanthemums are plentiful. I know but a few florists who appreciate the value of this plant for our purpose and there is not many who make it a practice to grow enough of them for their own use. Therefore instead of looking for something new and experimenting with one thing and another, let us take up the old reliable things and grow them until we actually have found something better to take their place. I certainly should not want to discard the anemone at present, for I do not know of any other plant, blooming so profusely at this time of the year, that could fill the place and yet many do without it entirely, but they would not object to it, I think, if they knew the value and good qualities of this favorite of mine. JOHN B. KELLER.

Rochester, N. Y.

New York Market.

Some especially fine hybrids bring \$9 a dozen. Julius Roehrs is cutting magnificent Ulrich Brunner, which command the highest price in the market. Gabriel Luizet and Magna Charta from the same place are also fine. There are comparatively few first class Beauties. Wiegand of Union Hill, is cutting fine Jacqs, which affect the price of Bennetts. When Jacqs are really good they are taken in preference to Bennetts, but many growers say there is little money in the first named rose.

Business has been very poor for the last few days, and is expected to remain dull for the next week. After the first week in Lent business is expected to improve again. The dealers do not anticipate any continued dullness during Lent, unless the weather is bad.

Many dealers have shut down on Lilium Harrisii for the present; the production is large and there is absolutely no demand now; it can't be given away. Flowers are generally very good, in spite of warm weather. EMILY LOUISE TAPLIN.

CHICAGO MARKET.—In the last two weeks the supply of all flowers has steadily improved and with the falling off in demand usual at the beginning of Lent there is a surplus of many varieties.

News Notes.

LYNCHBURG, VA.—M. & R. Driver are new florists here.

TRENTON, CANADA.—D. J. Hawley has started into the florist business here.

PHILADELPHIA.—Mr. Paul Berkowitz has been admitted as a member of the firm of M. M. Bayersdorfer & Co.

PORTSMOUTH, VA.—Three greenhouses built at the "Seaboard Floral Gardens" last summer are heated by steam, overhead, and the system is giving perfect satisfaction.

SPRINGFIELD, ILL.—The salesroom at the greenhouses of H. L. Phelps was with its contents destroyed by fire on the 5th inst. Loss about \$500 more than the insurance, which was \$300.

PITTSBURG.—Trade in cut flowers was dull for first half of February; fairly good since then and likely to continue so until beginning of Lent. Flowers in fairly good supply and of better quality than could be had during December and January.

NEW YORK.—Andrew Smith, an old man who is said to have kept a florist store at 388 Broadway for many years where he prospered until he lost \$20,000 through a bank failure, is reported by the daily *Herald* to be in absolute want at 237 Spring street.

PHILADELPHIA.—Mrs. Rosalie Woltemate, formerly a well known and leading florist of Germantown, died February 23, at her residence, 4646 Germantown avenue, of heart failure. Mrs. Woltemate was in her 73d year, and was born near Wittenburg, and came to this country in 1845. In 1850 she married Mr. Henry Woltemate, a florist on Germantown avenue, opposite Brighthurst street, and after his death, in 1850, successfully carried on the business until 1886, when she retired in favor of her sons, Albert and William. She leaves four sons.

MONTREAL.—The first show of the Florists' and Gardeners' Club will be held March 26 and 27. Over \$300 is offered in prizes. At a meeting of the growers, held for the purpose, a scale of prices for all kind of spring stuff was agreed upon, also the question of private places selling plants for less than the price of production was discussed and action is to be taken to try and stop the practice which is carried on to a large extent here. The city greenhouses also seem to do the same thing. Murray's tulips are the wonder and admiration of all who see them. Wilshire Bros. have to move in the spring. J. Montgomery joined the Benedict society March 5, may he never regret it.

DETROIT, MICH.—Preparations for the flower show to be held April 2 to 5, are nearly completed. The premium list has been published; \$906 is offered in premiums and in addition there are a number of specials. Twenty-one of the city charities have been interested in the success of the exhibition and they will have booths in the hall. Mr. W. H. Brearley, proprietor of the Detroit *Journal* who originated and is managing the enterprise agrees to turn over to the charities the net receipts over expenses and guarantees that there shall be no deficit. This will be Detroit's first flower show and it is to be hoped that it will prove so attractive and successful that regular annual exhibitions will be the result.

INDIANAPOLIS.—The annual meeting of the Society of Indiana Florists which was held February 22 and 23, was a very interesting and profitable one. Among the papers read were: "Essential points in chrysanthemum culture," by E. G. Hill; "The value of exhibitions," by Fred Dorner; "Elevate your profession," by J. S. Stuart; "Cryptogamous Plants," by Pierre Valaudeghiem; "Violets, their culture and disease," by M. A. Hunt; "Beautifying Home Grounds," by W. H. Lawrence. The following officers were elected for the ensuing year: President, M. A. Hunt, Terre Haute; Vice-president, Anthony Wiegand, Indianapolis; Secretary, W. H. Bertermann, Indianapolis; Assistant Secretary, Jno. Hartje, Indianapolis; Treasurer, Frederick Dorner, Lafayette. The banquet the evening of the 23d was a very enjoyable affair.

WASHINGTON, D. C., MARCH 1.—The cut flower trade has been quite active during the past week and there is every prospect of a steady increase in the business until Lent begins. The President elect arrived here early this week, and probably the eyes of no predecessor greeted so perfect and lavish a display of floral beauty. His rooms at the Arlington were redolent with the odor of choicest roses. No set pieces—but great masses distributed around in vases of exquisite form. Violets in one, lilies of the valley in another; a third vase contained upwards of a hundred select long stemmed Magna Charta of exceptional size most gracefully arranged, and another huge porcelain vase had even more superb Jacques fully bending over its sides, etc. All very simple and natural but wonderfully choice, reflecting great credit upon Small & Sons who I learned furnished and arranged the flowers. President Cleveland's dinner to the President elect was also rich in floral display.

DANBURY, CONN.—Florist J. H. Ives has a greenhouse roof which probably has no duplicate in this country. Mr. Ives found it necessary to replace much of the glass in one of his houses, and, thinking that some of the photographers of the place might have the size he wanted, called on them. E. D. Ritton is the oldest artist in town, and he had at one time some 20,000 negatives. Mr. Ives purchased enough of them to replace the entire roof, and now his plants are shaded by the faces of old citizens, many of whom are now dead. The scene inside as the sun shines through is a novel one. Mr. Ives has arranged them in groups. One represents the old graybeards who have long since gone to their rest. Next comes men of middle age, who are now old and bent. The women follow and then we see the young men and young women who are to day grandfathers and grandmothers. The children represented by the negative are married and have their children. In one corner, over the heliotrope bed, Mr. Ives has placed the lovers—those who were so far gone in the days before they were married as to have their pictures taken holding each other by the hand. It is expected by the ingenious florist that his heliotrope, which represents love, will thrive and flourish with extraordinary strength under the influence of the snickers on the faces of the love sick people.

Catalogues Received.

Michel Plant & Seed Co., St. Louis, retail plants and seeds; Paul M. Pierson & Co., Topeka, Kan., plants; Falls City Wire Works, Louisville, Ky., florists'

FORCING BULBS

FOR

Fall Delivery.

NARCISSUS

AND OTHER

POPULAR BULBS

FOR SPRING FORCING.

Special Prices upon Application.

Narcissus Albicans, large creamy white trumpets; one of the best.

Narcissus Bicolor Empress, the Queen of the bicolors, immense trumpets, a great favorite.

Narcissus Bicolor Grandis, similar in color to Horsfieldi; but with stouter flowers and much later.

Narcissus Bicolor Horsfieldi, a great beauty and fine for cutting.

Narcissus Bulbocodium, "Yellow Hoop Petticoat," fine strong bulbs for forcing.

Narcissus Bulbocodium Citrinus, pale sulphur flowers, and very early.

Narcissus Emmer, the largest; immense stout flowers of a rich yellow.

Narcissus Golden Spur, immense deep golden yellow flowers, and wonderfully early.

Narcissus Henry Irving, rich yellow, large bold trumpets.

Narcissus Incomparabilis Cynosure, a beautiful single incomparabilis for cutting, yellow cup, divisions creamy white.

Narcissus Incomparabilis Stella, large single white variety, very early, fine for cutting.

Narcissus Major, true, one of the best forcing sorts, large yellow trumpets, similar to maximus.

Narcissus Nobilis, a first class variety for florists, free and early.

Narcissus Obvallaris, the true Tenby daffodil, one of the best varieties, forcing deep rich yellow flowers of great substance.

Narcissus Odorus Campanelle, the well known Campanelle Jonquil, very strong bulbs.

Narcissus Orange Phoenix, large double white flowers with orange center, good for cutting.

Narcissus Pallidus Præcox, the earliest of all, forces very freely, single, sulphur colored trumpets.

Narcissus Rugilobus, true, large yellow trumpet, very free and very early.

Narcissus Scoticus, the Scotch Garland daffodil, a beautiful variety both for borders and for forcing.

Narcissus Von Sion, true, the double deep yellow daffodil.

Freesia Refracta Alba, large bulbs for forcing.

Freesia Leichtlini, a nice contrast to preceding and forces well.

Gladiolus The Bride, flower pure white, fine for forcing.

Helleborus or Xmas Roses in great variety, and extra fine flowering clumps for forcing, can be supplied early in fall.

And many other first class sorts. List of varieties and price I should be happy to furnish upon application.

ADDRESS

R. S. BROWN & SON,
BOX 99. KANSAS CITY, MO.

New York.

The violet is in great demand this season, ladies wearing them on their *bonnet* corsage and even pinned on their muffs. Neapolitan violets are special favorites of the Germans; they are considered more fragrant than the Marie Louise.

The little floral muffs carried by bridesmaids this winter are very charming affairs. They are formed upon a frame like other flower pieces and covered with moss on the side towards the dress and with a pretty arrangement of maiden hair fern or rose leaves at either end to conceal the absence of the lining. At a very pretty wedding last week some very effective muffs were made of yellow and white carnations with a spray of roses and maiden hair ferns for the center decoration. These muffs are beautiful made of violets set in maiden hair ferns, with roses at the side contrasting with the bridesmaids' toilets.

At the Astor ball, which occurred on the 14th, the most telling floral decorations were in the ball room. A large wheelbarrow made of straw and decorated with crimson ribbons, was wheeled about after the dance and its contents, which were bouquets of hybrid roses, were distributed among the ladies. There was a large display of orchids of marvelous beauty. The art gallery was decorated with American Beauty and Magna Charta roses. At one end was a large screen of smilax and roses. To the right of this a statue was garlanded with roses and ferns. The cotillion favors were pink roses, tied with wide crimson ribbon; these were deposited in a wheelbarrow trimmed with laurel before their distribution. Yellow acacias and superb carnations filled the great vases in the hall and calla lilies drooped before the mirror and in the reception room.

The last of the Patriarchs' Balls, which took place recently at Delmonico's, was beautifully decorated with garlands of roses which were looped across the thirteen windows of the ball room. This was almost the sole decoration and was intended by Klunder to show off the beauty of the roses which were phenomenally large. Mr. Klunder also had the honor of making the bouquet for Mrs. Harrison to carry at the inauguration ceremonies. It was composed chiefly of cattleyas, lily of the valley, Bride and Cusin roses and was very elegantly arranged. The bouquet was tied with a white ribbon, embroidered with a flag and the name of Mrs. Harrison. A boutonniere of white roses and lily of the valley and tied with red, white and blue ribbon was sent to Mr. Harrison.

Baskets were never so much used as at present in sending flowers. The introduction of the fish basket seems to have opened the way for other varieties; and the shepherd's crook, Marie Antoinette and all the larger baskets that can be

trimmed with silk and ribbon seem to be the favorites. The Marie Antoinette basket was superbly draped with white corded silk and filled with orange blossoms, with a small spray of bridal wreath for a bride coming home last week. The shepherd's crook basket was filled with Roman hyacinths, Niel roses and cyclamens for a gentlemen at the Langham. Hanft Bros. filled a basket oblong and deep, with round handle, which was beautifully constructed with bunches of La France, Jacqueminots, American Beauties, Mermets, lilies and lilacs most gracefully arranged. The handle was covered with roses and the whole was edged with white lilac.

The burial casket of Mrs. Allen, sister of Mr. Vanderbilt, was covered with violets; it was fringed at the bottom with white lilacs and at the breast was a cluster of white roses.

FANNIE A. BENSON.

Boston.

The beginning of Lent finds the market well stocked with flowers of every kind. Roses are of exceptionally good quality. The same is true of carnations, violets and pansies. Smilax is getting scarce and quality none too good. Heath is plenty, orchids are in their prime, and *Primula obconica* has become so regular a supply that it is to be seen even in the hands of the street fakirs.

The florists' windows are as usual at this time of the year gay with *Harrisii* lilies, *Acacia pubescens*, azaleas and other brilliant things.

The season just closed has been very lively during the past few weeks, in some measure atoning for the dullness of the early part of the winter. Prices have averaged lower than ever before, but have been comparatively regular with few sharp advances or declines. As Lent comes in so late this year it is probable that very low prices will rule until Easter. Growers say that on account of the mild weather which has prevailed they have not used nearly so much coal this year as customary. This fact will to some extent offset the low prices received.

There is no rose in the market this season which sells so well here for regular every day supply as the Bride. Mermet also holds its popularity, while LaFrance seems to be fast losing ground. Hybrids of all kinds have sold very poorly. *Adiantums* are very scarce and of inferior quality at present. Everybody is now looking forward to Easter and the stereotyped question this year is not, "Do you think I will get those lilies in time for Easter?" but, "Do you think I can hold this stuff back?"

Mr. Thos. Young, one of our oldest suburban florists, died at his home in Somerville, February 27, after an illness

of but three days. Mr. Young was a native of Scotland and 61 years of age, but has resided in Somerville, Mass., for the past 50 years. He was a skillful gardener and has made a special success in the cultivation of heaths. Above all he was a thoroughly honest and conscientious man, a kind husband and father and devoted friend.

The annual spring exhibition of the Mass. Hort. Society will take place on March 27, 28, 29. Premiums are offered for spring flowering bulbous stuff in variety, Indian azaleas, roses, orchids, cyclamens, cinerarias, etc. On Saturday, February 23 a new and distinct variety of *Cattleya Trianae* was exhibited at Horticultural Hall by Pitcher & Manda. It was awarded a first class certificate of merit.

The numerous friends of Mr. Fred L. Harris will be sorry to know that he has been quite ill for the past four weeks, and will heartily wish him a speedy and thorough recovery.

Mr. A. P. Calder has also been seriously ill with pneumonia, but is now convalescing.

The recent orchid show in New York attracted several of the Boston brethren to that city. They went off together, but came home in detachments. Judging from appearances they had made good use of their time and had done but little sleeping. They all say that they had a good time.

A novel and quite effective innovation in floral work was seen at a funeral recently. The design consisted of a magnificent "Gates Ajar," over which was the conventional crown surmounted by a cross. The novelty consisted of a tiny electric light which shone like a star on the apex of the cross. The effect was beautiful.

M. B. Faxon, the seedsman, has added a cut flower department to his business. His decoration on the occasion of Mayor Hart's reception on February 22, was artistic and appropriate and gave great satisfaction.

A slight fire at the greenhouses of W. E. Page, Brookline, on the night of February 25, caused a damage of about \$100 to house and contents.

C. R. Dane has given up his branch store on Park street.

Wm. Doogue has been re-elected superintendent of common and public gardens for 1889.

W. J. S.

PHILADELPHIA.—There is always a lull in the demand for flowers in the opening days of Lent, and this season has been no exception. A little later on the demand will increase; only the choicest flowers, such as fine hybrid roses, find ready sale just now. February was a much better month than January. Prices generally have ruled lower than at the same period last year.

The Seed Trade.

SEED TRADE ASSOCIATION.—Geo. S. Haskell, Rockford, Ill., president; Albert M. McCullough, Cincinnati, secretary.

THE SENSATION of the past ten days has been the disappearance of A. B. Cleveland, president of the New York seed company under that name. The matter has been so thoroughly written up by the daily press that our readers are no doubt acquainted with all the details that are public. So far nothing is known of his whereabouts, and his best friends fail to deny reports of serious defalcation, something less than \$40,000.

THE MARCH *American Garden* congratulates the country on its escape from the annual government distribution of alleged seeds. We do not read our *Congressional Record* with such hopeful eyes; (see extracts elsewhere in this issue). We should be glad to see friend Libby's authority for such a happy prospect.

THE COLD SUMMER on the Continent brings its fruit, or rather lack of fruit, in a partial failure of the flower seed crop. Many seedsmen complain of delay in shipment of their stocks as well as considerable shortage. It will be well if there be no further complaint as to their germination.

A. W. LIVINGSTON'S SONS, of Columbus, O., burned out Sunday morning, March 10. They are well insured and will go ahead. The trade will sympathize with them. The loss could hardly have happened at a more unfortunate time, as their spring trade was just at its height.

SECRETARY McCULLOUGH of the Seed Trade Association, expects to send out the programme for the Washington meeting about May 1. The headquarters will be at the Arlington (\$3) and the sessions begin Tuesday, June 11. He anticipates a good meeting.

A FEW spring-like days since our last number encourages somewhat the catalogue men who say the people may want a few garden seeds after all. But who will buy all the onion seed?

HOW ABOUT seed potatoes? Will they go lower yet? The Rural New Yorker No. 2 rots badly. Where is the "iron constitution" Bro. Carmen should have bequeathed it?

WHAT KIND of tomato seed is this we hear of at 75 cents per pound? Baltimore stock?

NOW DON'T let anybody offer the new Secretary of Agriculture stock in a seed company.

The Government Seed Distribution.

B. A. Enloe, of Tennessee, made the following remarks in the House of Representatives on February 8, 1889. It is also worth noting that the following gentlemen opposed Mr. Enloe and defeated his amendment, mark them: W. H. Hatch, of Missouri; R. W. Danham, of Illinois; J. B. Morgan, of Mississippi.

Mr. ENLOE.—If the gentleman desires to have the entire paragraph read I have no objection. But I offer this amendment, Mr. Chairman, with the object in view of trying to retire the United States Government from the wholesale seed business, and to try to retire the members of Congress from the retail seed business. I offered a similar amendment to the same paragraph of a similar bill in the first session of the Fiftieth Congress, proposing to cut this abuse down then one half.

This amendment now proposes to cut

it up by the roots, and if I could succeed in getting the amendment adopted I should propose also to strike out that part of the bill which provides an appropriation of \$8,400 for the pay of the superintendent and clerks in the seed division. In addition to that, I should also propose to go further and strike out the sum of \$4,200 appropriated for printing seed-packets, labels, postal cards, circulars, etc. So that if the proposition shall be adopted the amount in the aggregate that would be saved would reach the sum of \$12,600.

I know that this is a proposition that will not meet with the favor of many gentlemen on this floor, because it proposes to deprive them of the privilege of distributing seeds to their constituents. I understand that the object of the Government is establishing this bureau, or the object of Congress in making the first appropriation for the purchase of seeds, rather, was a very proper one. It contemplated the buying of new and valuable varieties of seeds and letting the Government take the risk and expense of making the experiments and tests to see whether they were adapted to our soil and climate, and thus save the farmers of the country that risk, in which way the appropriations for this purpose were designed to promote agriculture.

But, sir, we have departed very far from the original object in making the first appropriation. That appropriation was made in 1839, and the amount provided for the purchase of seeds and plants was the small sum of \$1,000. Congress in 1851 increased the appropriation to \$5,000 per annum. In 1862 the Bureau of Agriculture was established and the sum of \$62,000 was appropriated for this purpose. It has thus continued steadily to grow in popularity with the members of Congress until to-day we are appropriating \$100,000 annually for the purchase of seeds and for distributing them amongst our constituents. Congress, when it created the Bureau of Agriculture, declared the general designs and duties of the bureau to be:

To acquire and to diffuse among the people of the United States useful information on subjects connected with agriculture in the most comprehensive sense of that word, and to procure and propagate and distribute among the people new and valuable seeds and plants.

So it will be seen that the original idea was that the bureau should propagate and distribute new and valuable seeds and plants, but it was not within the contemplation of Congress at that time to go to the seed growers and buy the same seeds that are sold everywhere by merchants and distribute them among the farmers.

While this system is perhaps a boon to some people in this country, and has the approval and support of a great many men who have become attached to it, especially members of Congress who send these seeds to their constituents for campaign purposes, yet it does seem to me that it has grown into such an abuse, and a moss covered abuse at that, that we can no longer permit it to pass the House in an appropriation bill without at least an effort to abolish it. The time has come when the object which was originally sought in purchasing seeds for distribution no longer furnishes a reason for such legislation.

It was an evil principle in the beginning, however much we may approve the purpose in view. Insignificant as the sum expended may appear, and small as

the benefit received by the individual citizen who receives the seed is, still it is part and parcel of the legislation of a political school in this country which is steadily seeking to destroy self-reliance and to teach people to look to the Federal Treasury for gifts.

I can remember the good old days when the good women in the country homes carefully saved their own garden seeds every year and always had, not only enough for their own use, but some to give away to their neighbors. It is not generally so any more. Some look to the Government for a supply and some look to the seed stores. A few of the more provident still pursue the wise plan of caring for small things and saving garden seeds at home.

Of the thousands of papers of seeds sent out by members with the request from the Bureau of Agriculture for reports of results, how many are ever heard from? Instead of sending back reports to the Commissioner of Agriculture of the failure or success of the experiments with the seeds as the law intends, the majority think nothing about it and care less.

Some persons who receive the seeds do not even save seed from them when they are satisfactory, and often the very next season the member who sent them will receive postal cards and letters asking for the same seeds, and frequently the order of one constituent is of such proportions that even the Bureau of Agriculture can not supply all the varieties embraced in the order.

In 1880 the politician laid his relentless grasp upon the seed division, and took for his own perquisite, to be distributed as he might elect, two-thirds of all the seeds purchased by the Commissioner of Agriculture.

The number of papers received this year by each member is seven thousand, and such great agricultural centers as New York and Chicago, where they raise no other agricultural product but "bulls" and "bears" to toss the prices up and to ride the prices down, receive the same quantity that goes to the great agricultural empire in the "wild and woolly West" represented by my friend from Texas (Mr. Lanham).

Now, let us work out the scheme for distribution. Seven thousand papers of seeds to be distributed among 150,000 inhabitants would give each inhabitant of a Congressional district one paper of seeds about every twenty-one years if equitably distributed, and if you were to count the seeds perhaps each inhabitant would receive about one seed every year, and every one knows that a farmer can not do much good with one seed.

Mr. Chairman, if you are going to continue this business and the Government is going to run a wholesale seed house, I am in favor of putting it right down on a business basis and making the appropriation large enough so that everybody who pays taxes shall get seeds. Let the postmaster make the distribution. Let every man make his requisition upon the postmaster for the quantity of seed he wants, and let the postmaster draw upon the Department and thus give everybody an equal chance.

As it is, the distribution is unequal, unjust and unfair, and I am opposed to taking money out of the pockets of one set of people to buy seed and giving all the seed to another portion of the people—because a great many of them never see a seed from the Department, because no man can distribute them equally. I know, furthermore, that there is great

difficulty growing out of the transmission of these seeds through the mails. A man sees that his neighbor is receiving seed, and he says that he wants some, too, and he sits down and writes to his Representative, and the consequence is that the mail of members of Congress is burdened with applications for seed, and the members are said to be so overworked that there is a proposition now pending to give them clerks in order to relieve them of the burden of work that is cast upon them by this seed business and other duties outside the legislative business.

I am opposed to the seed distribution and against the proposition to give clerks to members, but if this system is sustained it will not be long before we will be called upon to pay from two to three hundred thousand dollars annually for clerks for the members of the house. I entertain the opinion if one man is to have his garden seeds furnished by the United States Government that every other tax payer is equally entitled to them. But if you are going to have tests made, and reports made, and are going to disseminate information among the farmers according to the original purpose in creating the Bureau of Agriculture, then this appropriation is much larger than is necessary for that object.

Another view of the matter is this, and it is the business view: We appropriate \$100,000 for seed annually, but the actual amount that is invested in seed, common seed at that, is only \$49,137.97. The expense of handling them is \$50,862.03. The expense of transmitting them through the mails, 205 tons of matter, as estimated by the Commissioner, is \$32,800 more, for I am informed by the Third Assistant Postmaster-General that it costs about 8 cen's a pound to handle this class of matter in the mails.

Sir, when you come to sum it all up—how much you spend for seed, how much you pay for clerks and officials to handle them, how much you pay for the transmission of the seed—you find that in order to send out \$49,000 worth of seeds you expend \$96,000 for salaries and expenses of handling generally. Therefore I say it is not a good business operation.

There are a number of gentlemen upon this floor who have a decided advantage over me as members in many respects. Many gentlemen can hire clerks to distribute seeds and conduct their correspondence. They have the money; I have not. They can buy seeds and distribute them. They have the money; I have not. But I can afford to serve the people for as little money as any gentleman on this floor, and if there is anybody here who thinks that he gets more salary than he earns he can cover it back into the Treasury.

We have passed a bill through both Houses of Congress proposing to make the Commissioner of Agriculture a Cabinet officer and to give him a seat in the Cabinet, and I think he ought to be charged with some more responsible duty than that of distributing seed. I think this department ought to be elevated so that the people might look to it for light and knowledge on the subject of agriculture, but not look to it as an agency for the distribution of garden seeds that can be bought cheaper at home, or better still, raised at home.

I have occupied about as much time on this question as I care to occupy. I only want to say that the farmers of this country, as I understand them, are not begging the Government for seed, but they are demanding that the hand of the tax

gatherer shall be taken out of their pockets, and that they shall be given an opportunity to keep some part of that which they earn by their toil. If you will do that for the farmer, his own industry, and the God above us, who sends the sunshine and the rain, and imparts fertility to the soil, will do the rest.

Mr. Chairman, with these remarks I submit this amendment. If the House sees proper to vote it down, all right; I will still distribute all the seed allotted to me, but if I had the power to prevent it, there should never be another seed distributed by a member of Congress.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSEYMEN SHOULD NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectively all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant without injury to the skin, wherever parasites may appear.

CATALOGUE MAILED FREE.

HARMAN & SON, Seedsmen, SOUTH BEND, IND.

Harrisburg Pa.

Loban McClintock has the old Schmidt place in better shape than it ever was, and is getting up a good stock for spring, despite the fact that he has to contend with steam heating in its worst estate—a badly arranged and wasteful system, which illustrates why some people condemn a good thing because they see a very bad abuse of it.

Gustaf Petterson has been quite unwell since the first of the year. His houses were damaged by the "blizzard" early in January. He has carnations in grand shape—Buttercup is superb here.

A carnation specialist is John Schofmeister, who is marketing grand flowers. He is especially successful with Anna Webb.

John Schmidt is devoting his entire time to his cut flower store on Third street, and seems to make it pay. He has a fine location.

Col. McFarland's greenhouses are improving in shape under the control of Anton Potherick.

John Laurence has been marketing some grand plants of *Primula obconica*; a specimen before the writer has thirty-six open flower clusters, rising from a mass of healthy foliage and flower stems yet to come; it is in a 4 inch "standard" pot, and is a perfect beauty. Mr. Laurence shows also exceptionally fine cyclamens, they are truly "giganteus," some so ne having flowers two inches long.

Retail cut flower sales are hurt by the fact that private places send their surplus into the semi-weekly markets at any price. The writer bought yesterday a really fine *Marechal Niel* bud and a large *Beaconsfield pansy* for four cents at seller's offer in the market. KEYSTONE.

CYCLAMEN GIGANTEUM

Now is the time to sow.

GARDINER'S STRAIN IS THE TRUE GIGANTEUM, and consists of the finest and most beautiful new sorts, unsurpassed for richness and variety of color, and certain to give unqualified satisfaction.

Per 100 Seeds, \$2.00; per 1000 Seeds, 15.00

Sow 100 seeds to the square foot.

SUCCESS AT LAST!

COOK'S AMERICAN SEEDLING RED ROSE

THE UNRIVALLED SOUVENIR DE WOOTTON.

BON SILENE X LOUIS VAN HOUTTE.

BROTHER FLORISTS:

You have wanted for years a continuous blooming red rose, for culture under glass.

First, Came ANDRE SCHWARTZ, the red SAFRANO, which has proved utterly unfitted to our climate.

Second, WILLIAM FRANCIS BENNETT, the superb red bud, which at times is unexcelled. Its faults, however, we all know by this time. No one can prevent its habit of resting or its tendency to black spot. Very few can grow it with sufficient stem. Its fugitive color will always be a great drawback, and its serious lack of lasting qualities, cannot be denied successfully.

Third, Came AMERICAN BEAUTY (SYNOUM, MADAME FERDINAND JAMAIN). That majestic flower, superb in color, in perfume, in growth, but not so free flowering, and occasionally producing defective blooms. We could not get along without it. It has had no equal among the hybrid teas for large work.

Fourth, Came PAPA GONTIER, with good shape, good color, and good foliage, but liable to crop, and with a tendency to drop its leaves, caused probably by its Bourbon parentage. This rose is an excellent shipper and keeper, but alas it has no perfume.

Fifth, Comes our WOOTTON, a genuine American Seedling, with the following good qualities:

First, Color, velvety red, equal to Jacquemot.

Second, Perfume which cannot be excelled.

Third, Continuous flowering qualities. It has no resting period—blooms and new growth existing at the same time.

Fourth, The most prolific bloomer in existence, every shoot containing a flower bud.

Fifth, Habit, exceedingly vigorous and in foliage quite equal to the American Beauty.

Sixth, It never makes imperfect buds and dark weather but deepens the color, giving it a richer shade of crimson.

Seventh, It retains its color for a long period; flowers having been kept by us in good condition for two weeks after being cut.

Eighth, It is a full double rose, and is good in bud, half open, or fully expanded. Full open flowers frequently are six inches in diameter.

Ninth, The color is even more intense and brilliant at night than in the day.

Tenth, It is free from black spot, the great enemy of the Bennett.

Eleventh, Its shipping qualities are perfect.

Below we give you the daily record of the number of perfect flowers cut from five hundred bushes, during the month of December, 1888:

Dec. 1	148
Dec. 2	132
Dec. 3	52
Dec. 4	82
Dec. 5	153
Dec. 6	105
Dec. 7	91
Dec. 8	204
Dec. 9	36
Dec. 10	69
Dec. 11	159
Dec. 12	94
Dec. 13	113
Dec. 14	82
Dec. 15	96
Dec. 16	112
Dec. 17	156
Dec. 18	83
Dec. 19	55
Dec. 20	63
Dec. 21	20
Dec. 22	43
Dec. 23	45
Dec. 24	83
Dec. 25	90
Dec. 26	96
Dec. 27	81
Dec. 28	40
Dec. 29	46
Dec. 30	33
Dec. 31	63

Total 2731

Or on an average of 88 per day. A large portion of these blooms brought 40c. each at wholesale.

Since the first of Jan. the bushes have been disbudled to secure wood for propagation, and some days as many as 1,400 buds have been pinched out. We shall bloom not less than 6000 plants during the next winter, and cast aside every other red rose.

OPINIONS OF PROMINENT FLORISTS.

JOHN HENDERSON & CO.,

FLUSHING, Dec. 11, 1888.

"This rose (Cook's Souvenir de Wootton) is among the best continuous flowering ones, being beautiful in color, form, and fragrance, which will undoubtedly commend it to all."

MRS. GEO. W. CHILDS,

January 7, 1889.

"Mrs. Childs received this afternoon, the beautiful Wootton roses Mr. Durfee so kindly sent her, and which she admires not only for their beautiful color, but for their delicious odor."

WM. J. STEWART,

BOSTON, January 8, 1889.

"The Woottons arrived in good condition. The La France, American Beauties were faded and gone, and the Puritans were brown as a bean."

JOHN BURTON,

CHESTNUT HILL, PHILA., Jan. 25, '89.

"Have just received box of roses. The Woottons are fine, and I think it cannot fail to be a profitable cut flower rose."

ROBERT CRAIG

PHILADELPHIA, PA., Feb. 5, '89.

"I think the Wootton will be a popular rose because it is such a free bloomer and so vigorous in growth. Many growers have failed to get entire satisfaction with Bennett and Beauty, but the Wootton will, I feel sure do well in almost any soil with fair treatment."

Remember, No Imperfect Flowers like the American Beauty produces.

✽ 60,000 YOUNG PLANTS FOR THE TRADE AT REASONABLE PRICES, AS FOLLOWS: ✽

\$180 per thousand.
\$100 per five hundred.

\$25 per hundred.
50 cents each in quantity less than 100.

From 2½-inch Rose pots. Orders delivered in strict rotation, by Mail or Express.

For Sale by

C. STRAUSS & CO. P. O. Box 422 WASHINGTON, D. C.

Also for Sale by

JOHN COOK, 318 CHARLES STREET, BALTIMORE, MD.

MESSRS. STRAUSS & CO.

Beg to add, that they have a Large Stock of Young Plants of the following Roses at very reasonable rates:

AMERICAN BEAUTY,

PAPA GONTIER,

ANNIE COOK,

MADAME CUSIN,

CATHERINE MERMET,

THE BRIDE,

THE GEM,

LA FRANCE,

PURITAN,

PERLE.

Their PURITAN and LA FRANCE have been pronounced the finest in the United States. A complete change of stock every two years seems to be essential to continued success in rose culture under glass.

Holiday Prices.

ED. AM. FLORIST:—In answer to your comment on my note in February 15 issue I would state that my sales of cut flowers never exceed \$200 a month and sometimes go as low as \$75 a month. I have practically a monopoly of the cut flower trade such as it is, but if I did not sell plants in the spring I would come out only about even. The highest priced design I ever made was only \$12, and the largest amount I ever made up for any one occasion amounted to only \$50. I have 5,000 square feet of glass. P.

Frankfort, Ky.

[The fact of our correspondent having a monopoly of the local trade explains why he is enabled to equalize prices as related in his former communication. Competition would quickly change the condition to that prevailing elsewhere.—Ed.]

Expanded Metal Co. Pittsburgh. | Chicago. St. Louis Expanded Metal Co., St. Louis.

GANDY'S PRIZE OR FIRST SEASON STRAWBERRY.

This shows its shape and average size. Its color is brightest crimson, very handsome and showy and so firm as to keep several days after gathered. In quality it is luscious, the plant a strong grower with a perfect blossom, entirely exempt from disease and an abundant yield; but its great value is in its remarkable lateness—lasting long after all others have disappeared and extending the Strawberry season to two months—and the fact that it yields a crop of its beautiful, mammoth berries the season the plants are planted. Full description, testimonials, &c., and a colored picture of it, mailed free. Plants by mail, 50 cts. a doz; \$2.50 per 100. By express \$15.00 per 1000.

Lovett's Guide to Horticulture, a handsome book of nearly 100 pages, finely printed and over 200 illustrations, describing every kind of hardy Fruit and Ornamental Tree and Plant, new or old, giving both defects and merits; replete with instructions on planting, pruning, culture, &c., and quoting Trees and Plants at half what they are usually sold for, will be mailed, with colored plates, for 10c., without plates free.

Headquarters for Wonderful Peach, Gandy and Monmouth Strawberries, Erie Blackberry, Abundance and Spaulding Plums, Lawson Pear, Meech's Quince, etc.—all fully described in the Guide. 200,000 Peach Trees, Apple, Pear and other fruit trees; Strawberries, Blackberries, Raspberries, Grape Vines and other Small Fruits; Evergreen and Deciduous Ornamental Trees, Plants and Vines and Nut-bearing Trees in almost unlimited numbers and great variety.

Plants by mail to all points of the Continent a specialty.

Mention this paper and a copy of *Orchard and Garden* will be sent free

Anonymous Communications.

We have lately received several communications unsigned except by an initial "Grower," "Employe," etc., and unaccompanied by any note giving real name and address. We can not use any such communications. We are willing that articles for publication may be so signed, but we positively must have the name and address of the writer that we may ourselves know the source of the communication. Readers sending in communications without giving name and address are hereby advised that they are simply feeding our waste basket.

"STANDARD" POTS

Ours is the only firm that has, up to this date, March 1st, 1889, made pots which
conform IN EVERY PARTICULAR to the requirements of the Committee of S. A. F.

THE
BEST,
CHEAPEST

and most durable pots manu-
factured.Endorsed by all the leading
florists.

For price list of the "STANDARD" POTS, address

THE WHILLCOX POTTERY CO. COMPANY,

No. 713 & 715 Wharton St., PHILADELPHIA, PA.

SYRACUSE POTTERY CO.

Are selling the New "Standard" Rim Pots in all sizes under 6-inch just about as fast as they can be
made, working night and day. We have only a few more "old style" pots of 3½-inch, 4½-inch, 5-inch
and 6-inch—for prices see "ad." in last issue. The old style 4-inch and smaller sizes are all sold out.
The Standard are far better in all respects and ship more safely. They are exact inside measure.
Each crate weighs 400 lbs. We deliver f.o.b. here. Syracuse is best shipping point. Send for prices
and frt. rates. Samples in first crate. We have fine smooth Rose Pots and all sizes of hand made
pots from 7-inch to 16-inch.

PRICES OF "STANDARD" POTS,

Size.	Price of 1000.	Crate No.	Price Crate.	Size.	Price of 1000.	Crate No.	Price Crate.
1¾-in.	\$2 80	4000	\$11 20	3-in.	\$5 00	1400	\$7 00
2-in.	3 20	3168	10 00	3½-in.	7 00	860	6 00
2¼-in.	3 60	2400	8 64	4-in.	8 50	570	4 85
2½-in.	4 00	1890	7 56	5-in.	14 00	320	4 50

We will sell at these prices any amount from one crate upward and also pack several sizes in a
crate to order. Notice the changes above both in number of some crates and the lower prices of 4-in.
and 5-in. Every word of the following **EXTRAORDINARY OFFER** is important. Until
April 1st discount 5 per cent. on sizes 3½-inch and under, when ordered in "Ready Packed Crates"
as above, and Cash with order. Cash is "N. Y. City Checks or Money Orders." On country checks
add 10 cts. for collection. Remit to

RUSTIC WORK

of all kinds, on hand and made to order.

JOHN C. URE, ARGYLE PARK, ILL.

GREENHOUSE HEATING.

BY A. B. FOWLER.

Explains fully all the best systems of heating greenhouses by both hot water and low-pressure steam. Tells you the points to consider in selecting an apparatus. How to adjust same to various locations; gives the results of the latest scientific experiments. Shows how to compute the number of feet of pipe required for a given space; draft and other important matters.

It is highly commended by Mr. John Thorpe and others. Postpaid, 75c.

Sent on receipt of price. Address,

THE FURMAN STEAM HEATER

ESPECIALLY ADAPTED FOR
WARMING GREENHOUSES.

Gives a most uniform heat night and day. Can be run with less attention, and a SAVING of fully 20 to 25 Per Cent. in Fuel over any other method. Burns HARD or SOFT COAL. Endorsed by leading florists. Send for full Illustrated Catalogue, showing how to pipe and heat a house by steam.

Address HERENDEN MANUFACTURING CO., GENEVA, N. Y.

HALES' MOLE TRAP

For destroying ground moles in lawns, parks, gardens and cemeteries. The only PERFECT mole trap in existence. Guaranteed to catch moles where all other traps fail. Sold by seedsmen, Agricultural Implement and Hardware dealers, or sent by express on receipt of \$2.00 by H. W. HALES, RIDGEWOOD N. J.

Ives' Putty Machine.

Patented Jan. 8, 1887.

The best device ever invented for laying putty. With this you can make old leaky sash perfectly tight without removing the glass. It will do the work of five men in bedding glass.

Sent by Express on receipt of price, \$3.00.

OF FIFTY-TWO REPORTS received from 41 cities and towns in 23 states (including two Canadian provinces) 36 state that the trade for the winter season compared with last season up to same date has been better (estimates varying from 10 to 50 per cent increase; probably averaging 15 per cent); 7 state that it has been about the same as last year, and 9 that it has been somewhat less. Regarding collections 10 reports describe them as better than last year, 23 as about the same and 19 as slower. In response to the query "How has trade since Lent began compared with last year at same time?" 21 reply "better;" 23 "about the same," and 8 "less." The reports were practically unanimous that bedding plants are in much better condition than usual at this time, owing to the very favorable winter. The replies to a query as to whether any increase or decrease had been noted in the demand for any particular flowers varied greatly. The principal increase noted was in the call for roses, long stemmed carnations and violets. The large proportion reporting collections as slower than usual is the only unwelcome fact presented by the reports, as slow collections are usually the precursor of lessened sales. In view of this it will be wise to make no delay in working for early orders and pushing sales of spring plants.

GENERAL REPORTS received from the seedsmen and florists who do business through the mail advise us that orders to date average somewhat lighter in proportion to catalogues issued and advertising done than last season.

The Winter's Trade in New York.

The past winter is generally regarded as a fairly good one. The quantity of stuff handled has been much greater than previous years, and has been disposed of with comparatively little loss. Prices have been much the same as the preceding season, perhaps somewhat less rather than more. The demand has been emphatically for good flowers.

There has certainly been an increased demand for large roses. Retailers who make a specialty of orchids say there is an increase in the demand for these flowers, the general taste being decidedly in favor of cattleyas. It is a lamentable fact, however, that retailers who do not keep orchids are apt to dissuade people from buying them, under the mistaken impression that they injure the sale of other flowers. That they certainly do not; they offer no competition whatever to such flowers as roses, but fill a place of their own.

The violet crop this winter has been extremely large, but owing to an increased demand these flowers have usually sold well.

Many of the retailers say that their returns have been prompt and satisfactory, but most wholesale men complain bitterly of slow collections, saying that in most cases they have to be content with something on account, instead of full payment.

While Lent has certainly seriously affected business, it is hardly so dull as the same season last year. One great trouble this year is that everyone is sending in a full quantity of stuff, even more than at the busiest season, and of course the depressed market can not take it. If the growers would only arrange to be off crop at the beginning of Lent it would aid business wonderfully. Many of the largest flower buyers go South at this season, and the retailers feel the loss of their patronage.

Bedding plants look extremely well and prospects are good for this branch of trade. Plant trade is looking up with most nurserymen, and the general impression is that trade generally is increasing in volume. It is certainly better than after the preceding Presidential election.

EMILY LOUISE TAPLIN.

Baltimore Trade Report.

A review of the situation in Baltimore for the season of 1888-9 shows that trade has been excellent and generally ahead of last year; indeed as one florist remarked, "he must be a crank indeed who would find fault with trade this season." In cut flowers La France roses have pretty well held their own in public favor, but violets have undoubtedly been the popular flower, they were somewhat scarce during the early part of the season; they are a glut now and can be bought for a song. Palms, ficus, pandanus and all decorative plants suitable for house culture have sold well, there has also been a decided increase in the use of plant decorations, but this departure has in no measure affected the sale of cut flowers.

Trade since the advent of Lent has been better as compared with the corresponding period last year. A good many of our leading florists declare that they don't notice any difference, and that while there are no large balls or dinners the average daily sales of cut flowers are quite as good as they were before Lent began.

There is, however, a wide difference of opinion as regards collections, for while a majority of our dealers declare that collections are slower than ever, there are others equally emphatic in asserting the very opposite. But it is freely conceded on all hands that the season has been characterized by a gratifying increase of "cash sales."

Bedding plants, both as to variety and condition, are quite equal to last year,

but in this department we are sorry to note a very decided falling off, especially in the wholesale trade, which is not nearly so good as at this time last year. But for all that deficiencies may be noted, trade in general has been eminently satisfactory and sufficient to make the most chronic growler among us sanguine as to the future.

A. W. M.

March 19.

The Mild Winter; Its Effect on Greenhouse Plants.

We have probably had no such winter as we have just passed through in fifty years. Not only has the temperature averaged higher—probably 10° since December 1—but we have also had a much greater amount of sunlight, and its effects have been apparent in the unusual vigor and health of all kinds of greenhouse stock throughout the entire season. Roses nearly everywhere are free from mildew and black spot, verbenas are free from rust and mildew and show a luxuriance this season that bids fair to bring them again into repute.

But the most marked difference of the season has been in its effects on plants raised from seed. Our market gardeners had almost become discouraged in their attempts to raise plants of lettuce in this vicinity in midwinter in consequence of the young plants in greenhouses and hotbeds "damping off." The plants used in forcing too from the same cause often did not give half a crop, but this season there has been no such trouble. Every crop that I have examined in this vicinity shows a vigor such as we see in crops outside in May and June.

Flowering plants from seed show the same vigorous growth; pansies, verbenas, hollyhocks, all of which have a tendency to damp off in the seed bed when sown in the winter months, have this season grown as freely as cabbage or radish seeds. This chance climatic advantage, judging from the past, we are not likely for some time to have again but the lesson is worth noting, it proves by nature's work on a large scale, what we all believed, that the greater the amount of light that plants can receive in winter the better will be their growth. This should teach us that in every practical way that can suggest itself the greatest amount of light must be given. That the nearer we can get the roof of a greenhouse to an unbroken sheet of glass the better. That the glass should be kept clear from snow, dust, or anything that will obstruct light, and that the roof should be placed—if the crop of fruit, flowers or vegetables is to be forced in winter—so that it will get the greatest amount of the sun's rays.

We are coming nearer to these conditions every year, nearly all the best forcing houses now being built detached far enough apart so that the one will not shade the other, built on the three-quarter span system with the long slope direct south at an angle of about 35 degrees.

PETER HENDERSON.

Jersey City, N. J., March 12.

An Open Letter to the Committee on Nomenclature.

GENTLEMEN:—The writer recently learned from a friend engaged in the florist business that at the convention of his society held last summer a committee was appointed whose duty it should be to properly name and classify all plants and seed offered for sale by the florists and seedsmen in the country, and that

the committee invited the co-operation of every one interested in this matter. As I include myself in the latter class, being an occasional purchaser of seeds and plants, and therefore desirous of rendering you every assistance, I wish to call your attention in this public way to the following:

The various magazines devoted to horticultural and agricultural topics, and which also serve as a medium through which the florist and seedsman brings his wares to public notice, are now and have for some time been liberally sprinkled with advertisements of startling novelties in the floral world, bearing euphonious and poetical titles, the origin and history of which a careful scrutiny of the latest standard works on botany fail to throw any light upon. Is it because they were unknown to these writers and "wasting their sweetness on the desert air" until discovered by their present possessors? or are they old favorites which the enterprising advertiser has re-baptized without the formality of announcing it to those most interested, *i. e.*, the possible purchaser, and if so, why is not the reason for such action given? Are we certain that in purchasing these "Eurekas" we are getting something new? is the question respectfully referred to the committee, as the advertisements carefully conceal the date of their discovery, botanical names, and everything which should naturally inspire confidence in the buyer who has naturally become suspicious of these "meteors" which flash across the horticultural world, leaving nothing but disappointment in their wake.

I do not wish to be understood as objecting to the use of English names for plants, or denying any one the right to apply such titles, but it should be in conjunction with the proper botanical name used parenthetically so that we may know what we are buying. Out of the west comes the announcement of a wonderful curiosity bearing the title of the "Sunset Plant." This it is to be presumed is a descriptive name inspired, no doubt, by its fancied resemblance to the glory of the sun as it makes its diurnal journey across the Sierras and disappears in the broad bosom of the Pacific. Is it really so gorgeous as to merit its title? and is it a new discovery? Is the "cinnamon vine" a new name for an old plant; and if so, what should we call it? Is the "Rainbow plant" some obscure species which the advertiser puts forward to dispute that title with *Alternanthera p. major*, which that useful plant has already pre-empted and which it can justly claim? From the picture accompanying the adv. and the description annexed to it I am led to believe that it is an *amaranthus*, and if so it is easy to see why its name is suppressed, as the number of seed packets at 50 cents each which would be sold of any of that species would hardly pay for the printing. If the *sine qua non* desired in naming a plant is to have its title descriptive of its good qualities did the author of "Sweet Nightingale" wish to imply that vocal powers were granted to it in addition to the other grand attributes which he claims it possesses? and can not the same plant be procured under another name? From the same prolific source of prodigies—which are usually so fleeting—comes another wonder ycleped the "Satin Flower," and announced as a new variety of marvelous beauty. A new variety of what? This question will no doubt be answered if the price of this "Rara Avis" is sent to its present proprietor, but if it is all he claims why not offer it under its botanical name? Is it

because this would enable buyers to procure it elsewhere at a lesser cost? There is a fuchsia widely advertised under the name of the "White House," which is illustrated by an engraving that has already done service as the picture of another new variety recently introduced. Is not this then a pseudonym applied at this particular time because of the popular interest centered in that "Mecca" of all Americans in the hope that particularly verdant, but patriotic purchasers may be found for it under its alias? It is certainly open to suspicion.

I also wish to protest against the reckless use of the word "new" when prefixed to old plants as calculated to mislead the unwary. For instance, "The New Perpetual Flowering Carnation Emperor" is announced in heavy type, while its old name (for it is old, having done service for 20 years), the "*Dianthus Quercetii*, or German Piuk" is barely discernible. This is, by the way, not a carnation at all, but a pink, and is properly a variety of *Dianthus hybridus multiflorus*. The point I wish to make is that being offered as "new" they may be bought by some who already have them and consequently cause annoyance, which will surely result to the disadvantage of the seller. In the same way we have the "New Moonflower" offered, but it is not stated in what particular it is "new." The suspicion is well founded that it is employed as a means to reap the aftermath from the sale of this excellent old plant.

In this connection I would ask what is the difference between the lucerne so widely offered as the "New Forage Plant" and that usually sold? Have the advertisers discovered at this late date that lucerne is a valuable forage plant? I fear they are sadly behind the times.

The foregoing are some of the dubious advertisements to which the attention of the committee is directed and if you are to do practical work should be looked into at once. Let us have your views on this subject.

OBSERVER.

Is This Fraud?

In a recent issue of the FLORIST I discovered an article under above heading that looks as if it were intended to bring discredit to the fuchsia White House, which I am positive is all in my hands and is the same as if I had raised it from seed myself. The temporary name it had does not amount to so much mention as it received from my friend, since it is no horse of a registered pedigree that requires a life-long name to identify its offspring.

Again the article says that the cut does the fuchsia Mrs. E. G. Hill a great injustice. Does the writer really know what a cut of the E. G. Hill fuchsia looks like? I am sure that there seems to be a great mistake somewhere, as the firm of Hill & Co. have the fuchsia both in wood cut and colored lithograph that are as different from the White House cut as the geranium from the cineraria.

Who has the true cut? It would seem to me that Hill & Co. would have the true cut as it receives its name from the wife of the head of the firm; and no doubt the plant was first brought to this country by the same firm. If not where did it get the name? If you notice, the cut used by Hill & Co. has long pointed and stiff well reflexed petals, while the cut used for the White House has blunt and incurved sepals and not as a rule reflexed.

Can you point to any similarity in the two cuts? If so, please do so through the columns of the FLORIST. I confess

WEDDING DECORATION.

that I can not say which is the true cut of Mrs. E. G. Hill fuchsia, but would naturally think Hill & Co. had the correct one. But one thing I do know is that the White House fuchsia has the habit and appearance of the cut it has adopted, while one firm has the Hill fuchsia drooping, and another has it a stiff erect grower. E. HIPPARD.

Youngstown, O.

[Regarding the main point raised by Mr. Lonsdale—namely, the use of a cut which had already appeared in many catalogues illustrating another variety—our correspondent begs the question. Engravings of the same flower or plant drawn from life at different times can never be exactly alike in every detail, though differences do frequently appear that should not. But it is the use of an engraving as a portrait of one variety which has already been used to represent another one that is condemned, and the condemnation is just. Our correspondent does not deny that he has purchased an electrotype of a cut engraved from the Mrs. E. G. Hill fuchsia and used it as an illustration of a different variety.

And we regret to note that he is not the only one who has been so unwise as to use engravings of one variety to illustrate another. It is a growing evil. Other similar cases may be noted by a careful inspection of the spring crop of catalogues. While some of these engravings may well represent the flowers with whose names they are labeled the effect upon the possible buyer who notes the same illustration with two different names is certainly bad, for doubt at once arises as to the correctness of either. In this way an injury is unjustly done to him who has used the cut to illustrate the flower which it was originally designed to represent. We do not believe that in any of these cases there was any intention to deceive buyers. Probably the matter had not occurred to them in the light in which we have presented it, and that now the matter has been brought to their attention they will discontinue the practice.—ED.]

Long Island Notes.

BY WM. FALCONER.

THE SWEET NIGHTINGALE enquired about by Mr. Lonsdale, page 332, is catalogued by the florist who sends it out as a datura, but from the description or illustration the species remains in obscurity. This is wrong. While he has a perfect right to give a common name to any plant that has not already got one, in order that the name may become generally adopted, we should know what plant is referred to, if it be not a garden variety, cross or hybrid, and unless we get the specific as well as the generic name, we have a right to ignore his common name. Nightingales is a common name for *Geranium Robertianum* and *Arum maculatum*, but the name Sweet Nightingale has not before now been recognized as identified with any plant.

THE RAINBOW PLANT also enquired about by Mr. Lonsdale is catalogued as an amaranthus. In this the florist is safe. Many of the garden forms of amaranthus have, by intermixing, lost their specific identity, and if he has secured a different form from any before now fixed named variety, he is justified in calling it *Amaranthus "Rainbow,"* or the "Rainbow Plant." The name Rainbow flower is applied to iris blossoms in general, but the name "Rainbow Plant" has never before now been applied to any plant so far as I can find any trace of it.

IRIS SUSIANA comes from Persia and Asia Minor. Large quantities of dried bulbs (rhizomes) are imported every year into this country, sold, planted and most of them lost. They are quite cheap, especially at wholesale rates. It is useless to treat them as hardy plants for they are not satisfactory as such. Potted and treated as cool greenhouse plants or grown in well protected frames we get along with them first rate. It takes them a year to recover from the enervation of being dried off like tulips and kept dry so long; but if they fail to bloom the first year after importing, keep them over and growing all the time and winter them in a cool house or frame and they will re-

ward you with some of the largest and finest iris flowers you ever saw. Mine are in bloom now, end of February; they had been kept in a frost-proof frame.

THE CHINESE NARCISSUS—Fourteen years ago F. W. Burbidge, curator of the Botanic Garden, Trinity College, Dublin, wrote a pretentious, elaborately illustrated book, "The Narcissus, Its History and Culture," and in it told us all about the Chinese "water" narcissus except its origin and variety. But the oddest thing about it is that never till this winter has he had or grown this variety himself. He writes me (last month) a gentleman in America "sent me a great ugly bulb at Christmas time that would have given a Dutch bulb grower a fit. I put it into a pudding basin in water and stones and changed its water (milk warm) every day, and it now has five spikes and is very pretty and much admired. They grow much more rapidly in water than earth. It is a good variety of *N. Tazetta* with white petals and yellow cups." He got the genuine article. But using milk warm water and changing the water every day were unnecessary. Now while this plant has been grown in America for twenty years, in limited numbers till recently, but now in vast quantity, why has it such difficulty in entering Europe?

ANTS AND SEEDS.—I sowed some boxes of *Vinca rosea* seed and in a few days observed common ants very busy on the soil in the boxes; they were carrying off the seed, but every seed they had was bursting in germination. And in the case of seedlings that had started so far as to have grown half an inch the ants cut off the tops with the seed husk attached and carried them away. Of course by raising the boxes on pots set in saucers of water their little game was lost. Can some entomologist tell us what they wanted with the vinca seed which they selected in preference to fifty other kinds on the same bench?

Dutch Roman Hyacinths.

I notice "Dutch Roman Hyacinths" quoted among this year's early offers of bulbs for fall delivery. Is this in accordance with the expressed desire for a correct nomenclature. The article in question is nothing but a Dutch miniature hyacinth, which means a bulb that has not attained its full growth and size on account of lack of age. W. ROELKER.

New York.

Wedding Decoration.

The illustration shows a portion of the decorations arranged by Siebrecht & Wadley for a recent wedding at the Hotel Brunswick, New York City. The mirror at the right had a double curtain of smilax with a large bunch of acacia bloom bolding the center, and the one on the left a single curtain of the same. Blooming plants of genista, daisies and cyclamens were used with effect among the palms, dracenas and ferns.

Worth \$5 Each.

Mr. J. N. Gerard, of Elizabeth, who is sadly afflicted with "Mum" fever, wrote me the other day: "Here's something to keep worms out of pots; a sure cure. Take wire mosquito netting—jersey size—cut into squares large enough to cover the holes in pots, on this put your drainage. Result, no worms to make you say cuss words." This is supposed to be for "mum" growers, but rose men can use it. Any donations can be sent to make premiums for mums. JOHN THORPE.

Philadelphia.

It is the universal opinion among florists here with the exception possibly of the top-heavy light weight from whom the screed, as copied by the *FLORIST* from the Philadelphia *Times* emanated, that it had better have been suppressed ere it were expressed.

"Beaus."—What does W. J. Stewart mean in his note relative to the comparative shipping qualities of Souvenir de Wootton when he says, "and the Puritans were brown as a bean"? Hereabouts beans are white, red and black and frequently speckled.

"The National Emblem" was down on the cards as the subject for a paper to be read at the last meeting of the Florists' Club, and Mr. H. H. Battles was appointed to prepare it, but owing to that gentleman having a few days previous taken sides with the Benedicts his absence from the meeting was pardonable. The readers of the *FLORIST* are acquainted with Mr. Battles' views on the subject, he having voiced his sentiments in its columns in a very interesting paper last summer. The oak is his choice, and certainly no better emblem could be selected. The dress worn by the wife of the President of the United States was decorated with the pattern of "the burr oak leaf" as if to verify Mr. Battles' hopes and convictions.

I have no sympathy with what is here-with reproduced from the *American Garden* for December last. Editors are mortal and even they make mistakes sometimes. They are proverbially overworked, and this is sufficient evidence or the following would have been excluded from its columns, or severely pruned by a judicious use of the blue pencil. Listen to what is said:

The discussions now going on in regard to adopting a national flower are amusing, but that is the best that can be said of them. We venture to predict that our country will be without national floral emblems, other than those now used upon our coins, until some flower is distinguished in some essentially national event. The discussion is especially interesting from the part taken by worthy foreigners in trade here. Some of the florists seem to think if they can agree upon a flower they will immediately start a boom in the sale of it. The number of florists' flowers chosen is noticeable. Our earliest decorators used the Indian corn, and the tobacco was often employed to distinguish us abroad. So far, those who feel the necessity for a national flower have been unable to agree. We fear, friends, you will have to wait until some flower rises into prominence from causes over which florists and gardeners exercise little control.

The above was inspired (save the mark) by a small voice from Pittsburg which said the committee appointed at the convention held last August in New York, was composed of foreigners excepting Miss Taplin, who, as noted in a later issue of the *FLORIST* was also foreign, for she happened to be English. Now it turns out that the chairman, Mr. Robert Craig, is an American both by birth and instinct, and no better man could have been selected for the position. Mr. Peter Henderson is a member of that committee. Although Mr. Henderson was born in Scotland, who can point out a better citizen or more thorough American? And so on through the list, some of whom may happen to have been born on foreign soil.

That fling at "foreigners in trade here" is in exceeding bad taste, because in the first place, the foreign element "in trade here" is not more anxious to start a boom in the sale of what might happen to be adopted as the national flower than the born American, and no florist worthy of the name, so far as has come to my knowledge, has advocated any flower from a mercenary point of view.

There are excellent men who share the opinion as expressed in the extract, but who can deny that the body of florists composing the national society are as noble and high-minded a class of men as are to be found in any profession or trade in this or any other country? And as to the occasion, they are capable of making that.

EDWIN LONSDALE.

Notes From the Recent Show at New York.

BY WM. FALCONER.

MR. LOW, of London, is here again.

VEITCH'S AGENT has not yet arrived and no one seems to know who is coming.

MR. FOSTERMAN doesn't look as well as he did before he went to Chicago; but his health now is improving.

FREDERICK MAU says "It's coming. A specimen of *Vanda Sanderiana* 8 feet high and with 18 growths."

WHILE MANY of the plants were good specimens, well flowered and capital examples of artificial cultivation, a large number of them were small and not such as we would expect to find at a competitive exhibition. But altogether it was a beautiful and meritorious display and answered well the purpose intended, namely, to popularize orchids and familiarize the people with these lovely flowers.

WHILE I think it is very well to exclude roses, carnations, hyacinths, tulips and other general flowers now so abundant in our florists' windows, from a strictly orchid show, I firmly believe that an effort to include new and rare and particularly striking flowers of any kind wouldn't detract from the orchid show at all, but add largely to the general interest of the public in the exhibition.

THE CATTLEYS were the gayest, and *C. Trianae* in variety composed the great majority. Mau had a splendid white variety with 13 flowers. It was imported from South America last May. A multitude of the cattleyas in bloom were also last year's introductions from their native wilds. Some of our most astute orchidists have an idea that white-flowering cattleyas which display no trace of purple the first year after being imported are apt in later years to show a tinge of purple coloring.

SIEBRECHT says "of all orchids, either for my own private or commercial purposes give me first, cattleyas; second, phalaenopsis; third, odontoglossums."

CATTLEYA FLOWERS stuck into phials of water wired in among large masses of *Lælia anceps*, appeared perfectly at home, and many a thousand visitors failed to observe that they were not the real blossoms of the plants they were stuck among.

CÆLOGYNE PANDURATA was in a glass case and had one greenish flower. It comes from Borneo and Siebrecht says it is "the rarest flower in the exhibition." Well, its beauty needn't keep you awake nights.

CALANTHE VESTITA OCLATA GIGANTEA had strong, upright arching-tipped

spikes 3 feet long and in fine bloom. It is a decidedly gigantic variety and much later in blooming than the typical vestita, and the bulbs are larger, smoother and not so abruptly ended. The eye is red as in *rubra oculata*, the individual flowers are exactly three inches across. Mr. Fosterman collected some four thousand bulbs of it in Borneo a few years ago and sent them to England. But it is still very scarce in the market. There were lots of *C. Regneri*, a rosy pink flowered deciduous species from Cochinchina, but the blossoms are not bright enough to arrest attention.

A GOOD white variety of *Dendrochilum glumaceum* is, I think, one of the sweetest and most graceful of orchids, and it is easy to grow, always green and a good looking plant and a sure bloomer, but Terry Walsh wouldn't grow such a thing and Mangold chucked it out of doors. Now give us some pæonias and Oriental poppies.

RED FLOWERING ORCHIDS are few. *Lælia harpophylla*, a Brazilian species, was the brightest and most showy; *Masdevallia Harryana* and *Sophranites grandiflora* also added to the list, and so did the odd but distinct little *Odontoglossum roseum*.

MR. SIEBRECHT thinks it would pay to grow *Oncidium Cavendishianum* for cut flowers. But more beautiful is the showy yellow *O. Rogersii* and other forms of *O. varicosum*.

AMONG DENDROBIUMS *D. Deari* and *D. formosum giganteum* were the ones that seemed to outlast without flinching the heat and draught; the other species representing better and more showily flowered specimens quickly succumb to arbitrary treatment.

THE CYPRIPEDIUMS of Pitcher & Manda were a revelation to orchidists. Here we had the plants in bloom. Eighty kinds were catalogued, but there were others as *marmorophyllum*, *vernixum* and *Measuresianum* that were not in the catalogue. *C. nitens*, a hybrid between *C. villosum* and *C. insigne* Maulei, was especially beautiful; *C. villosum aureum* was one of the largest, glossiest and most striking in the hall; and *calurum Rougieri*, *euryandrum*, *Harrisianum* superbum, *intermedium* and *Leeanum superbum* deserve special mention. Rather an odd flower was one of *C. insigne* with a corrugated lip. Still there are among cypripediums, even among the rarest and most valuable of them, some kinds that are plain enough. Among jewels in a glass case Mr. Siebrecht had a little plant of *C. hirsutissimum* with one bloom of unusual large size. "That plant is worth \$50."

EPIDENDRUM COCHLEATUM is a weed among Jamaican orchids. Henry Siebrecht calls it the "Owl Orchid," because he can see an owl in the blossom. It was then but high noon, a few hours too soon for my imagination to become so elastic.

It is reported that Mr. Wallace had lots of it at one time and tiring of them pitched them out into the rot pile; Mr. Scholes had also accumulated a lot of them, but with an eye to business landed them at Young and Elliott's. Green and vigorous, leafy, but without blossoms, "something new I hope!" Wallace bought the lot! The house "came down!"

Easily Caught, Slugs and Snails.

Being troubled badly by the depredations of slugs and snails, my neighbor,

CENTRAL ARRANGEMENT AT THE RECENT ORCHID SHOW AT NEW YORK.

Blauvelt, gave me this remedy: take some fresh crushed oats, lay on boards—about a 2-inch pot full—place them where the enemy congregates, and in the evening take a light and go over the ground; there you will find your game without fail if there is any. Try it brothers afflicted with Helix. It is right to say that this recipe appeared in the AM. FLORIST years ago. JOHN THORPE.

Black Rust on Verbenas.

Your correspondent, Mr. H. A. Bunyard, writing on this subject in your March 1 issue, is so hopelessly floundered that some one must extricate him from the position into which he has blundered. He has arrived at the sage conclusion that the verberna is a soft wooded plant, and gives a learned dissertation on cause and effect. For his information I will say that it is already settled beyond the shadow of a doubt that the "Rust" is caused by a microscopic insect whose ravages are first invited by a debilitated condition of the plant. I have frequently counted from eight to ten of these little pests browsing on the "field" of the microscope, which is about one-sixteenth of an inch in diameter. This, taken as the basis of a calculation, will show in what appalling numbers they must exist on a bench containing say ten thousand plants, and how utterly useless it is to try to cope successfully with an enemy which is so numerous and has proven itself so tenacious of life. The only remedy I believe is the one recommended by Mr. Peter Henderson, viz.: throw the plants away as soon as they show the slightest symptoms of the disease, as it is quickly infectious. Mr. Bunyard's assumption that the disease is generated by using cold water is absurd. I was employed for years in an establishment where verbenas were grown by hundreds of thousands, and where the only water used was that furnished by the city, yet a "Rusty" plant was prac-

tically unknown. He also advises us to take the sand from our benches and grow the plants on the bare slates, but does not consider that numerous florists grow verbenas successfully who do not possess that luxury. To carry out his idea in this case would require a man's time to keep the plants watered and would surely result in a crop of insignificant flowers.

Another correspondent recommends a rigid quarantine against all plants infected with the disease. This is sound advice, but to extend his caution to seeds is I think carrying the point too far. That the disease is infectious is freely admitted, but that it is carried on the seeds is preposterous. A careful examination of hundreds of flowers and seed pods from diseased plants failed to discover an insect on one of them.

The true remedy for this pest is prevention. Assuming that the stock is free from it, if the following method of culture is adopted it can be kept in that condition: The plants should be set in the open ground early in May in a rich mellow soil, care being taken that they do not suffer from excessive drought, as a dry condition checks the growth and invites the insect producing the disease. By the middle of August they will have grown to two or three feet in diameter and about this time will show signs of lessening vitality, caused by abundant flowering and consequent exhaustion of the vital forces of the plants. To check this natural waste and reinvigorate the plants cut back the shoots six or eight inches all around; cut off all the flowers and any wood in the center of the plants which is not rooted on the ground; fork up the soil around the plant and then spread a compost of equal parts fresh soil and well rotted stable manure—which should have a fair proportion from the cow shed—to a depth of about two inches, putting some on the plant, particularly in the center. This will restore lost vitality and produce a growth of young

shoots—soft and vigorous—just what is wanted for cuttings. The first propagation is usually done about the middle of October and the greatest care should be exercised in selecting the cuttings. Do not risk putting in any hard or stringy wood, as although these will root, they will not make good stock and are usually the source of all the ills the other plants become heirs to. The cuttings should be potted as soon as they show roots—every day in the bench after that is an injury to them. When they are well rooted in the pots such as are wanted for stock should be shifted into a size larger and as the season advances should they show signs of exhaustion water them freely with liquid cow manure. The proper temperature for verbenas during the winter is from 40° to 45° at night and 50° to 55° during the day, with plenty of ventilation—a free circulation of air is most important.

If this treatment is religiously followed success is certain and we would soon hear the last of the "Black Rust." As the verberna—like other plants of its character—is not as vigorous when grown from cuttings for a lengthy period as when produced from seed, it is well to sow some seed each year, early enough in the season to flower before the planting out time, so that a selection can be made of such as are equal to, or superior to the old varieties, and planted out for stock. If this practice is followed a fresh stock direct from seed may be had every year and will prove a most valuable safeguard against all diseases. The present season there is very little rust seen in this vicinity. The weather having been particularly favorable for the best development of plant growth. FLORIST.

New York, March 8.

Some Lantanas Which are Worth Growing in Addition to the Older Varieties.

Californica: This is dwarf in habit, compact in growth and a good pot plant as well as a good bedder or border plant. Color, a lemon yellow with a bright center, making a beautiful contrast. It is greatly admired by all who see it.

Diadem: This variety is of great merit. It is half dwarf in habit, well adapted for pot culture and bedding. The flowers are very large and full, a lovely shade of pink.

Colibre: This is the finest of all the reds, color a bright dark red when fully open. A good grower, fine pot plant and bedder.

Drap d'Or: A great improvement on **Pluie d'Or**, being of better habit, branching of its own accord and a trifle taller. The color is a darker yellow and the foliage a deeper green. Good for all purposes. Sweet scented.

Mine d'Or: Much the same as the preceding, but of dwarf habit and the flowers of a lighter color, sweet scented. Both these varieties are well worth growing and it is safe to say that when well known they will replace the now popular **Pluie d'Or**.

Triumph de Commerce: A stiff sturdy grower; flowers, center yellow bordered with a pleasing lavender.

Iris: Much the same as the preceding, but the border of the flower is of a much darker color. The plant is of sturdy growth. DAILLEDOUZE BROS.

Flatbush, N. Y.

CUT WORMS.—Will some one tell me through the FLORIST what should be done to prevent or destroy cut worms in the greenhouse? F. C. S.

A New Bug.

For some time I have noticed a trouble amongst my Perle roses for which I could not account. Many of the buds when about one half developed would become discolored and gradually drop to pieces. A couple of weeks ago I made a post mortem examination of one of these buds and found near the center of the flower a small greyish bud, probably $\frac{1}{4}$ -inch in length and quite distinct from the common rose bug; searching further I found about a dozen. I have caught them several times since, although I failed to find the insect in a good many of the buds examined. Rose buds may become blasted or rot off at the neck from a variety of causes, none of which however existed in this case, on the contrary all the conditions under which the roses are growing are particularly favorable to a healthy and vigorous growth. There are several other varieties growing on the same bench, but so far the trouble is entirely confined to the Perles. I am satisfied that this bug is "the elephant in the wood pile," and will be glad to hear the opinion of others on the subject.

Baltimore.

A. W. M.

New York Rose Notes.

Mr. J. N. May has a lot of new roses at his place, but so far he has been unable to find the one particular star among roses for which he is longing. He is yearning to meet with a new yellow rose—it must have the color of a Buttercup, clear bright yellow, and the shape, size, habit and constitution of Catherine Mermet. When he meets with a rose which completely fills this bill, Mr. May expresses his perfect readiness to mortgage his last garment for the purpose of buying up the entire stock.

Souvenir de Wootton, the new hybrid tea recently noted in the *FLORIST*, was seen at Mr. May's; it is somewhat suggestive of Beauty in size and color, but distinct in shape, exceedingly fragrant and apparently very vigorous. It is a cross between Louis Van Houtte and Bon Silene.

Gloire de Margottin is a new hybrid which M. Margottin himself considers the finest thing he has yet produced. The color appears to be much the same bright cherry red we admire in Ulrich Brunner. Margottin prophesies great things of this rose, though it is as yet comparatively untried.

Mr. May says he is going to try Ma Capucine the coming season, it has been in a state of innocuous desuetude the past few years, but it is a charming little rose, with a color unapproachable by any other.

Marquis de Vivens, that is another rose likely to be brought forward next season; so is the Duchess of Albany. This is a sport from La France and is like its parent, only more so. The same pink as La France, but much deeper; it seems to make more and harder wood than its parent, a decided advantage.

Viscountess Folkestone is not a new rose, but it is not much grown. Flowers are similar in shape and texture to La

France, color a delicate shell pink, with a yellowish tinge. Put it by brighter flowers in daylight and it is too pale, but alone it is charming, and it lights up wonderfully by artificial light.

EMILY L. TAPLIN.

Wood Lice in Rose Beds.

In answer to E. D.'s query, I have found nothing that will keep them in check so well as the toad.

Like E. D., we had wood lice here by the thousands; they could be seen everywhere. In June we gave the houses a good cleaning out under the benches and used plenty of whitewash in their breeding quarters. When planting was finished in July we introduced about 200 toads. We have toads on the benches now as big and fat as they are out of doors in the summer time, and they take care of the wood lice and other insects as well. Try the above next summer. In the mean time try the following: The last thing at night place peroxide of silicates on small pieces of dry boards and lay them about on the rose borders. Scatter it also on any convenient wood work. I think this will bring relief.

Bristol, R. I.

M. J. EDMONDS.

Madame Hoste.

I send you four buds of Madame Hoste which will give you a little idea of the style of bud and length of stem with which they are produced. The plants from which these were cut have been cropped for cuttings four times this winter, hence they are fully one fourth to one third less in size than when grown on strong bushes. We think highly of this rose for forcing and predict it will take rank with Perle, Bride and Niphetos.

Richmond, Ind.

E. G. HILL.

[The blooms sent were on straight stems from seven to eleven inches in length with good clean foliage. The buds were about the size and form of a good Perle, of a very pale yellow in color. Certainly a very charming rose.—ED.]

Rose Mrs. John Laing.

Will some of the growers who have handled this rose in quantity please give their experience with it through the *FLORIST* and say whether it will force like Am. Beauty or not? I feel sure that replies will be of great interest to others besides myself who have not yet grown it, but think of doing so.

J. B.

A Propagating Feat and a Banquet.

In the spring of 1887 Mr. W. W. Coles, of Lansdowne, Pa., bought from Craig & Bro. for one dollar a thrifty young plant of the celebrated rose Mrs. John Laing. By skillful handling it developed into a fine plant and grew so satisfactorily that Walter could not resist the temptation of calculating how many young "Laings" he would have the following spring. One day in July, '87, Mr. Coles met Mr. John Burton and the subject came up in conversation as to how many young rose plants could be raised from one stock plant, in one season. I forget how many Mr. Burton said he thought it was possible to raise, but Mr. Coles very emphatically asserted that he could raise 500 by the following April (1888). This was just as vigorously disputed until a wager was proposed—a champagne supper for those present—which was accepted and put on record.

The plant continued to improve, and

as the time for operations approached stocks suitable for grafting had to be secured, for there were no restrictions as to how the propagating should be done, either by grafting, budding or on own roots. After some slight difficulty the necessary number of Manetti stocks were obtained and on December 24 the first lot of plants were grafted, amounting in number to something less than 180; most of them grew and made a rapid growth. In the following February these plants yielded a number of scions—considerably over 1,000—and on the day specified, namely, April 15, 1888, Mr. Coles had the extreme satisfaction of pointing out to the referee, Mr. John Westcott, upwards of thirteen hundred plants fit to ship to any point in this country.

So confident were the principals in the wager during the progress of the contest that the number to be catered for at the supper was increased to ten.

From a number of causes over which neither Mr. Burton nor Mr. Coles had any control, the banquet did not take place until a few evenings ago. Covers were laid for ten. The participants were Messrs. Burton, Coles, Craig, Coldfish, Fancourt, Lonsdale, Savage, Whiteley, Westcott and Weiss. It is the universal verdict that it was the most pleasant affair of the kind any of the guests had attended. Our host had provided with an unsparing hand, nothing was lacking to make the occasion memorable and complete.

After the menu had been disposed of Mr. Robert Craig proposed the health of "Walter W. Coles, the hero of the hour." Mr. Coles modestly responded, briefly stating the origin of the wager and the manner in which it was won, and predicted a great future for the rose with which he had recently been so closely associated. Mr. Burton proposed a bumper to "American Beauty, the best rose that has ever been introduced," coupling with it the firm of George Field & Bro., of Washington, D. C., to whom belongs the credit of discovering its good qualities, and called upon Robert Craig to respond. Mr. Craig did so in his usual happy style, and related among other things, that one morning about four years ago he received a rose from Washington, which was a revelation to him; the flowers were large, of good color, with long stems and deliciously fragrant. The following morning he received letters from John N. May and Ernest Asmus, both of which stated in effect that there was a fine rose at Washington, and asking for a date to be named when it would be convenient to go and see it growing. Nearly everybody in the business is familiar with the subsequent history of the Beauty.

The only rival of the Mrs. John Laing—Mme. Gabriel Luizet—was next toasted, and the writer of this was called upon to respond and said that although the Laing may possibly force with greater certainty for an early crop and may render a good account of itself generally yet it can never dim the lustre which the Luizet has shed around the city of Philadelphia.

Mr. Burton called upon the last speaker to relate a circumstance which had come under the latter's notice during a visit to Washington in January. He spoke in substance as follows: When, in company with Messrs. Craig, May, Harris, Scott and Whildin, we called upon the wide awake firm of J. H. Small & Sons, the conversation drifted towards roses. One which H. A. Dreer has on trial for winter forcing was referred to, and Mr. Henry

Small said that Mr. Dreer's representative called upon them a short time before with blooms of this rose for their inspection, which were pronounced good, "but," continuing, Mr. Small said, "we found flowers of it in a box of smilax which had been received from Mr. Burton and remained in the box three days before they were discovered and they certainly were the finest that had ever been in their store." Mr. Burton had been in Washington earlier in the month and had mentioned that he was cutting some fine hybrids and had put a few in the box of smilax to prove it. On my return home when I referred to the matter to John he laughed and declared it was a good joke, as it was not Mr. Dreer's rose at all, but Mrs. John Laing. Speeches and singing were kept up until a little after midnight when we dispersed, everybody well pleased with his entertainment.

The question now uppermost in many of our local propagators' minds is: Can W. W. Coles' record be beaten?

Philadelphia. EDWIN LONSDALE.

Mantel Decoration.

Our illustration shows a fireplace as decorated by Siebrecht & Wadley, New York, for the occasion of the Zeidlitz-Roosevelt wedding. There were palms and daisies below and genista, cyclamens, palms and dracænas above. No cut flowers were used, plants alone forming the entire arrangement, which was very favorably commented upon.

Baltimore Odds and Ends.

The standard flower pot is becoming quite an institution. Calling on "another fellow" who doesn't live a hundred miles from me, I found him mending his benches, using the while a 5 inch standard pot as a nail box, he gave me a big standard pot to sit on, and before parting we exchanged civilities over a 3-inch standard pot full of sparkling —, however, that is immaterial, sufficient to say it wasn't city water. Potteries here and elsewhere will soon find that if they want to do business with florists in their vicinity they must manufacture the standard pot. I am informed that one concern in this city is making, or about to manufacture them; this will be particularly convenient for those of us who feel bound to support only home trade, even at the cost of inconvenience to ourselves. I am as much in favor of patronizing home industries as the next man, but when the sentiment leads one to the wilful use of an inferior article, it looks like carrying the principle too far.

The Charity Ball recently held in this city, was—so far as the decorations went—far ahead of any that preceded it. The "hop" was held in the armory of the Fifth Regiment, and a more suitable hall could not have been selected. The room is 135x95 feet with a wide gallery extending all round, the ceiling is arched and braced together with iron rods twenty-five feet above the floor. These rods were festooned with double rows of wreathing, handsome streamers being fastened at the intersections. The galleries were draped with red and white bunting upon which four rows of wreathing were very tastefully arranged. Five immense gun racks on each side of the hall were completely hidden from view by magnificent groups of plants, a first rate specimen palm or other plant being used for the center and the groups filled

in with azaleas, camellias eight and ten feet high in bloom, echeverias, Dracænas, rhododendrons, lilies, ferns, palms, etc., each group presenting a perfect harmony of flower and foliage. A platform fifty feet wide—occupied by the musicians—was the most effectively decorated point about the room. A row of very large arbor-vitæ ran along the back, and in front a superb bank of the choicest flowering and foliage plants extended the entire width of the stage, the center of this group was a splendid Euterpe edule, and among the other plants were some pretty specimens of Acacia pubescens in bloom. Miniature forests were arranged in the corners of the room and on either side of the entrance, and the ante-rooms, supper rooms, etc., were appropriately decorated. In these decorations 1,500

MANTEL DECORATION.

yards of wreathing and thirteen large furniture wagon loads of plants were used. James Pentland arranged the decorations, which were pronounced by Baltimore "society" and society lights from other cities the best ever seen at a public ball in this town.

Reading of "A florist who has no use for this paper" (page 346), brought to my mind another of similar type with whom—to my great edification—I am very intimately acquainted, although a sense of his attainments prevents him from consorting with his less gifted craftsmen. I have never known him to be present at a flower show, or any gathering of florists, or to make a friendly call on any of his brethren, and I have never known him to take part in any movement to promote trade interests except to make caustic remarks about the efforts of others, but if there is anything under the sun connected with horticulture that this man doesn't know, on which he isn't a profound authority, it hasn't yet been discovered. It is an unfortunate thing—at times anyway—for a man to know too much. "A many years ago," while yet a comparative greenhorn, the writer applied to the late Robert Buist for a "job," being inquired of as to whether we were an outdoor or indoor "hand," we modestly intimated that we could fill either position with equal grace and ability, and we thereby put our foot in it, for Mr. Buist gravely replied, "Captain, you and me can't make a hitch, you know too much for my place." Later, when better acquainted

with Mr. B., he frequently warned us to "keep clear o' men" who knew everything and could do anything, an admonition that has frequently stood us in good stead.

At the meeting of the Florist Club held March 6, the old officers of the society were "put in" for another term. On general principles we are not in favor of re-electing the old officers, in this case, however, we don't think a wiser policy could have been adopted. At least Mr. Halliday's re-election as president was but a fitting recognition of his untiring efforts in behalf of the club. The reports of the financial and other officers shows the society to be in a very prosperous condition.

A run through the principal commercial places hereabout shows spring stock to be abundant and in excellent condition. Pentland, as usual, has a splendid lot of verbenas, "clean as a whistle," and in all respects quite as good as any I have ever seen here or elsewhere. Verbenas are popularly regarded as among the plants that "any one can grow," but however simple the cultural necessities of a plant may be it can't be grown well without proper care and attention. We have seen in the Baltimore and other markets verbenas with two or three stems, a foot or eighteen inches long, and strung up to a stake, which the most elastic courtesy wouldn't permit us to call well grown plants, yet it doubtless cost the florist as much to raise such unsalable stock as to grow stout bushy plants, requiring no stakes and bound to sell on sight at the highest market price.

R. J. Halliday is fairly under way in his new store, No. 8 South Charles street, in which building the florist club also meets. The store is a very pretty and commodious one, but personally, we feel a little regret that Mr. Halliday has moved from his old stand on Baltimore street, which had become a sort of landmark, particularly to florists from other cities. Halliday & Bro. have not quite completed the "fixins" of their store at No. 11 East Baltimore street, when finished it will be one of the prettiest florist stores in the city; the firm have been enjoying a good trade so far and feel quite sanguine as to the future. These young men represent the third generation of Hallidays who have been engaged in the florist business and our good wishes are best expressed in the hope that their business career may be attended by the same success and prominence that has so abundantly fallen to the lot of their father and grandfather.

A. W. M.

Greenhouse Construction.

In this issue we give the first of a series of articles on greenhouse construction by Mr. John N. May, which will we believe, be of considerable assistance to many. The figures with which the articles will be liberally illustrated are drawn to a scale which will add much to their practical value.

We do not believe in fancy structures for commercial purposes, but we do believe that it pays well to build substantially; to build for 25 years rather than 10.

But while we favor the erection of first class houses where any are to be built, we believe that in many sections the area of glass is already sufficient to meet all demands, that the yearly additions have been rather in advance of the increase in demand and that growers should be conservative in the matter of making further additions. The experience of the

past year is convincing proof that profit to the grower lies now not so much in increasing the quantity of his output as in improving the quality of the same.

Experience with Various Sorts.

The interchange of ideas resulting from observation and experience will do a great deal toward solving the problems as to what varieties of carnations to grow and how to grow them so as to attain the best results, after taking into consideration the probable effects of soil, climate, construction of houses, ventilation, etc. Even were these conditions exactly the same, two florists might take each a house of carnations, or any other plants, and through a single mistake or accident on the part of one achieve very different results. Thus we see that the success or failure of others under apparently the same conditions will not serve as an infallible guide but each must to some extent experiment for himself.

In reply to Mr. Esler, page 300, would state that in spring our carnations are planted in sandy soil, rich in vegetable matter, without a trace of clay and further enriched with stable manure and bone meal and when taken up in the fall are placed in the same kind of soil in the houses, seven of which are three-quarter span 20 feet wide and 85 to 100 feet long, with raised benches in all of them except three which have solid center beds.

As to climate, we might ask what is climate but the condition of the atmosphere in regard to heat and moisture? Then do we not, to a certain extent, make our climate what we choose in our houses during the cooler parts of the year.

We heat with steam and during the winter, in all houses excepting one, a night temperature of from 48° to 50° is maintained, slightly higher during the day, always giving plenty of fresh air in mild weather. In the one house we excepted above—20x100 feet, and filled with various kinds of carnations—we have during the past winter kept a night temperature of from 60° to 62° with the following result: Snowdon, Garfield and Hine's White yielded blossoms a little earlier than in the cooler houses but the flowers were much smaller and very inferior in quality, and the plants are at this writing (March 7) very much exhausted, especially Snowdon; while in the cooler houses they are still covered with a profusion of buds and blossoms.

Our soil is kept only moderately damp but the foliage is sprayed thoroughly and often in bright weather, and owing to the light and porous soil we can use plenty of water without danger of injuring the plants.

We followed the above treatment with nearly 11,000 plants of over fifty standard varieties and are pleased with the results, but are satisfied that the best has not yet been reached.

We have secured for the coming season thirty other new varieties, some of which we imported from Europe, many of them offered this year for the first time, and it is our intention to give them a careful trial.

JAS. G. HANCOCK.

Grand Haven, Mich., Mar. 7.

More Notes on Carnations.

Such notes as Mr. Chitty's, together with the proof of his statements, are of great value to those interested in carnations. If we can only get at the facts in all our undertakings there would not be so much guess work.

I feel that I am doing my duty by making the following corrections as to varieties in Mr. Chitty's notes: Fred Johnson is a light red carnation with fringed edges, raised by W. Tailby, of Boston, and sent out with Grace Wilder and Princess Louise; the one described as Fred Johnson is May Queen, a seedling of mine raised previously to Chas. Henderson and Rosalind; when the latter bloomed I did not further propagate May Queen, thinking Rosalind the best. It was about this time I gave to Mr. L. Siebrecht a few cuttings of it together with some of each of Tailby's set. Portia is undoubtedly the correct name of the one called Glowing Coal, and should be kept as Portia.

The fungus which made such deadly attacks on carnations the past winter had probably the most favorable season for its growth ever known. The incessant wet weather beginning on the 9th of November and continuing without intermission, excepting two days, until the 22nd was without parallel; the most complete conditions for the spread and growth of fungus growth.

A house of E. G. Hill of over 1,500 plants suffered more than any other variety with me. There was in this sadly afflicted lot about 50 plants dotted here and there over the bed that never suffered and came through scathless, which proved that there was a positiveness of the condition of these plants which enabled them to repel the attacks of the fungus. How these conditions were obtained and why they differed from the 1450 seemingly under the exact conditions is not for me to say, but that they escaped is a fact.

As a remedy I applied very freely with the syringe a mixture made of lime, sulphur and potash, boiling the whole together for two hours in two gallons of water, which reduced it to one gallon, the mixture was allowed to settle and then bottled; when used a 3-inch pot full was put into three gallons of water and the plants syringed every morning for three weeks. I find that to kill fungus of all kinds it is also highly necessary to continue the treatment for at least two weeks, as the spores are continuously spreading for eight or ten days. I may say that my Hill house is now in fine condition, but I lost my January crop.

Pearl River, N. Y. JOHN THORPE.

SEEDLING CARNATION.—Mr. J. G. Burrow, Fishkill, N. Y., sends us specimen blooms of his seedling carnation. They are bright crimson in color, of good size, and the specimens sent were on extra long stems. One stem bore four flowers and two buds and another one flower and four buds nearly all of which could have been cut with separate long stems. We should consider it worthy of trial, though an unfortunate tendency to burst the calyx will probably detract from its value.

Seedling White Pink.

Morgan & McVittie, Barrie, Ont., send us two blooms of a white florists' pink, which they state was among a lot of seedlings from carnation seed imported from England. It much resembles "Snow" (Mrs. Sinkins) in appearance. The blooms sent were possibly a little

larger than those from that variety and the petals more fringed. They were very double.

The senders describe it as perfectly hardy at Barrie, where the thermometer goes to 30° below zero; a very free bloomer with flower stems 6 to 8 inches long; good for forcing and valuable as a plant for spring sales.

The flowers sent were certainly good and if the plant maintains the very desirable characteristics ascribed to it we should consider it a welcome addition.

Greenhouse Construction.

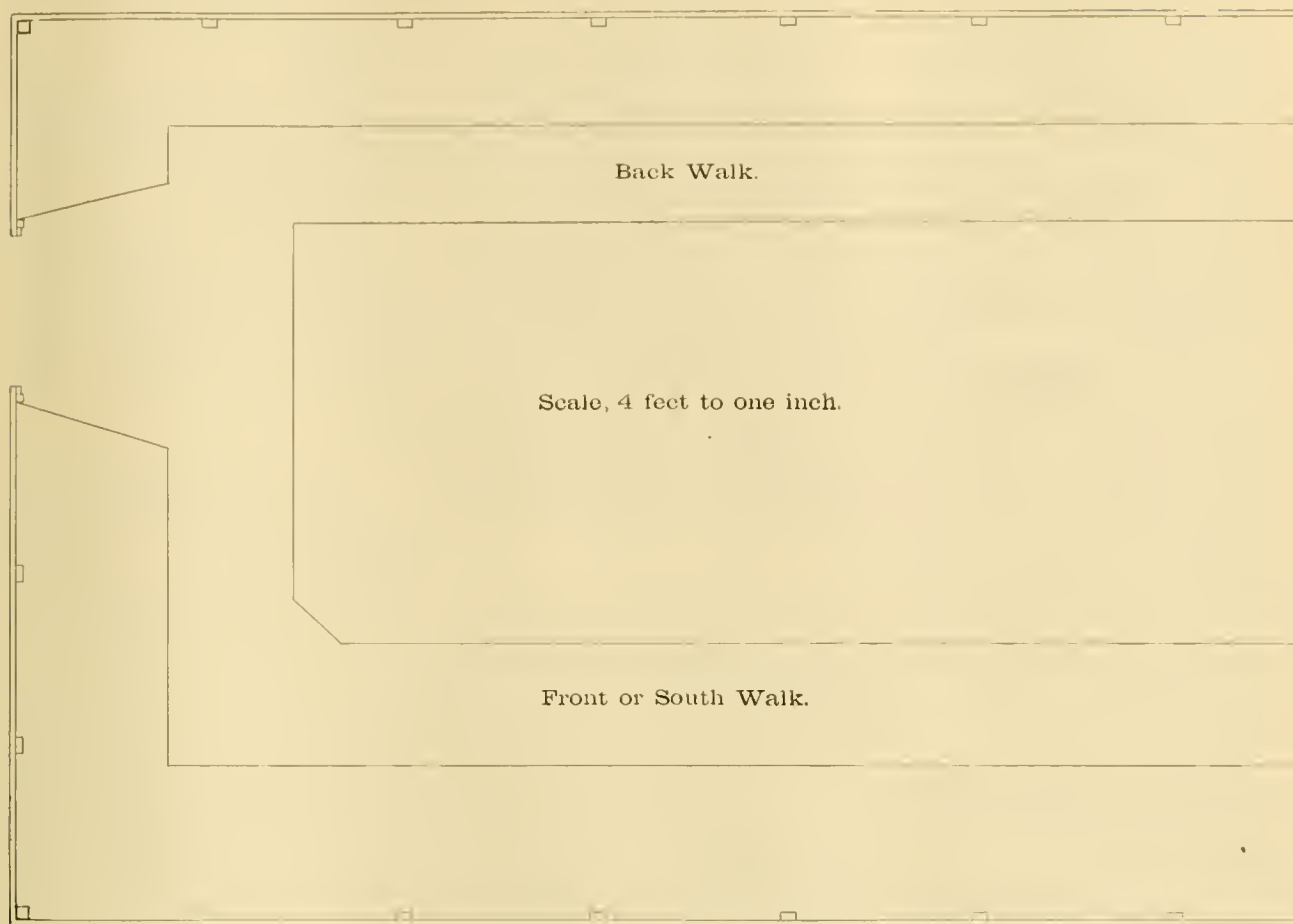

BY JOHN N. MAY.

I.

How to build commercial greenhouses suitable for a general business in a manner to best secure all the advantages of light, strength and durability at a moderate outlay is an important matter to the florist, and one which is evidently not fully understood by many in the trade. To assist such I will give the readers of the *FLORIST* the benefit of my experience and observation, the subject being one which I have made a study ever since I began as a boy to work among plants in greenhouses. Having had the opportunity of noting errors in the construction of houses which have failed to produce the best results I have been enabled to profit by such experience and avoid some of the mistakes made therein and may save others a similar unprofitable experience. I offer this explanation fearing that some may think I lay unnecessary stress on some apparently trivial items. Many will I doubt not differ with me on many points, and if any can suggest improvements on my mode of building no one will be more grateful for the information than myself.

Before starting to build the first thing to consider is position. If merely an additional house the choice is probably limited to the space adjoining houses already erected, but it should be borne in mind that it is very important to build all the houses so that they connect conveniently with a shed at one end, for if otherwise arranged there will be a perpetual nuisance and loss of time in running from one house to another, to say nothing of the inconvenience where stock has to be moved from one house to another in cold weather. For those who are starting to build for the first time there are several things to consider, all of which are of vital importance. First: drainage. Be sure the land on which you are about to locate your houses can be readily and well drained deep enough to allow of a good deep boiler pit, not less than eight feet if possible below the level of where your houses are to be built, so that you will never have trouble by water collecting in the boiler pit. Next in importance is the grade of the land. Some think that a hill side facing south is very desirable. It may be to a few but a level or nearly level piece of land is for all purposes much the best in my opinion. If a level place can not be had a very gentle slope to the south is the next best. Another item deserving more than a casual thought is the quality of the soil. It should be of a character good enough to grow good crops with a little assistance from fertilizers, or such soil should be conveniently near by where it can be obtained in sufficient supply, for if the soil for growing has to be obtained from distant points the expense eats considerably into the profits.

Having decided these points satisfactorily the next thing is to make a ground

GREENHOUSE CONSTRUCTION. FIGURE 1

plan of the houses it is intended to build now, arranging so as to provide for any number that may be wanted in the future. By planning ahead in this way future additions can be much more conveniently made and being part of a definite plan will form a complete range, uniform in length, all the houses being connected at one end or by a vestibule running through the center. The lack of a regular system of arrangement is a serious drawback to many establishments, detracting from their utility as well as appearance, and those about to build should certainly profit by the mistakes of others in this direction. By starting right considerable after trouble and additional yearly expense may be avoided, for it certainly costs much more for labor to run an inconveniently arranged place than one arranged systematically and conveniently. When these matters have been satisfactorily settled the next thing to consider is the style of house to build.

After trying almost every conceivable size, shape, length, width and form of house for all purposes—growing plants, flowers, fruits, etc. I have come to the conclusion that for almost every purpose an intermediate width, length and height is the best. Very wide houses have many disadvantages and there is always considerable loss in space; very long houses are very inconvenient to work in—emptying, refilling, etc.; very narrow houses are not desirable as the limited amount of atmosphere they contain will fluctuate too closely with the outside temperature and are generally inconvenient

to attend to. Avoiding any of these extremes I prefer a house not less than 16 feet or over 20 feet in width and from 100 to 150 feet in length. In finally deciding the size and shape it should be borne in mind that light is a very important factor. Although we do not get our direct rays of light from the north still the northern skies reflect considerable light and it is always advisable to have some glass facing the north where houses run east and west, though it takes nearly double the amount of coal to heat one foot on the north side that it does to heat the same area facing south. To meet this I have adopted a uniform length of rafter (6 feet) for the north side and with my next paper will give a drawing illustrating its advantages.

The accompanying engraving (Fig. 1), shows a ground plan of the style of house I have found most desirable. The posts are set 3 feet 11 inches apart measuring from center to center. The house is 18 ft. 6 inches wide from outer face of posts.

Look Out for Him.

Messrs. H. Cannell & Sons, the well known English florists, inform us that they and others in the trade were recently victimized by a party formerly a florist at Bristol, and enclose a letter from the police department which states that the swindler had been traced to Liverpool, where he took passage for America, buying a ticket through to Chicago. His correct name is given as Allen, and is described as follows: height about 5 feet

7 inches, stout built, ruddy complexion, healthy look. Adopts the alias Edmunds and hails from Bristol.

Philadelphia.

Sixty members and guests of the Florists' Club sat down to its sixth annual supper the evening of March 21.

President Robert Craig presided over the table. In introducing the speakers of the evening, Mr. Craig said that the club was in a prosperous condition. Its membership was steadily increasing, and during the past year had been incorporated and hoped, before long, to occupy its own building.

Toasts were responded to as follows: "The National Society," John N. May, President S. A. F.; "The Horticultural Press," W. A. Stiles; "The National Flower," C. F. Evans; "The Seed Trade," George Watson; "Mrs. John Laing," George Evans; "Mme. Gabriel Luizet," Edwin Lonsdale; "Souvenir de Wootton," Walter Coles. Addresses were also delivered by James Kent, Gilbert Moore and others.

Among others present were Benjamin F. Durfee, of Washington; Ernest Asmus, of New York; James A. Penman, of New York; William J. Stewart, Secretary S. A. F., of Boston; Ed. Jansen and August Rolker, of New York; John Brogan, of Flushing, N. Y.; P. Welsh, of Boston.

A *CALLA* with three spathes is sent us by R. J. Groves, Atchison, Kan.

News Notes.

WASHINGTON, D. C.—An effort is being made to organize a local florists' club here.

ALLEGHENY CITY, PA.—Fred Burki, the Bellevue florist, has opened a store at 322 Beaver avenue.

CHARLESTON, S. C.—The floral exhibition of the Agricultural Society of South Carolina will be held commencing April 23.

LEADVILLE, COL.—Mrs. H. Stockdorf has purchased the florist business formerly conducted by Mrs. E. Cliffe, who died recently.

NEW ORLEANS.—The third annual flower show of the New Orleans Horticultural Society will be held at Odd Fellows' Hall April 4 to 7.

MILWAUKEE.—Miss Ida Fourness will continue the florist business formerly conducted by Mrs. Ver Bryck at 408 Milwaukee street.

ELIZABETH, N. J.—The Elizabeth Nursery Company last fall erected three houses, each 60 x 10, for the propagation of young stock for the nursery.

BUFFALO, N. Y.—A large rose colored rhododendron four feet in height and in full bloom proved an excellent window attraction at the store of G. D. Hale recently.

LONDON, ONT.—John Craig, eldest son of S. H. Craig, died February 20 after a brief illness. Deceased was about 19 years of age and a bright courteous young man.

PEORIA, ILL.—William Cation, the florist, and a man widely known, died March 17 of typhoid fever. He was 74 years of age. The business will be carried on by his son Matthew.

BALTIMORE.—On account of the treacherous state of the weather the March flower show of the Horticultural Society lacked much of the proportions which characterize it at other seasons.

CLEVELAND, O.—J. M. Gasser has purchased ten acres of land on Lake avenue fronting the lake, and has commenced building thereon thirteen rose houses to contain 40,000 feet of glass. The new houses will have all modern improvements.

MILWAUKEE.—D. L. Dalglish has sold his place to C. C. Collins, of the Garfield Park Rose Co., Chicago. It is his intention to run a branch rose growing establishment here. The Wisconsin Florist Club will discuss the standard pot at their next meeting, April 2.

HARTFORD, CONN.—A local florists' club has been organized and officers elected as follows: President, A. J. Sloper; Vice-President, John Gerard; Secretary and Treasurer, W. R. Stone. Regular meetings will be held the first Tuesday evening of each month. A committee has been appointed to report as to the best time for holding an exhibition.

LOUISVILLE, KY.—Wm. Mann has bought a new place and will this spring build thereon four new 100-foot houses to be heated by hot water under pressure. Since Lent began certain florists have cut prices on cut flowers to a ridiculously low figure, selling Perles, Mermets and other roses at 5 cents each, and Jonquils at 10 to 15 cents a dozen. The other

florists are of course indignant and it certainly would seem that such a heavy reduction is suicidal for those making it as well as a serious injury to those who are obliged to meet such competition.

MONTREAL.—At the annual meeting of the local club, which occurred March 18, the treasurer's report showed a balance of \$73 on hand. As soon as a suitable room can be secured there are to be meetings twice a month, one evening for discussions, reading papers, etc., and the other for social purposes only; in this way it is expected a lot of talent will be brought out which is now lying dormant. Officers for the ensuing year were elected as follows: President, John Doyle; 1st Vice, Geo. Trussell; 2nd Vice, Jas. McKenna; Treasurer, Jas. Nairn; Secretary, W. Wilshire; Assistant Secretary, A. Wilshire; Ex. Committee, J. Walsh, J. Eddy, J. Kirkwood, J. Dunbar and C. Campbell. At the close of business the members adjourned to supper, at which 49 sat down; after supper toasts and songs filled up a pleasant evening.

Buffalo.

The first annual meeting and election of officers of the Buffalo Florists' Club was held the evening of March 8. There was a good attendance and a large vote was polled with result as follows: President, W. J. Palmer; Vice-President, Wm. Scott; Secretary, Dan'l B. Long; Treasurer, Thomas Clayton; Recording Secretary, W. A. Adams; Executive Committee, E. J. Mepsted, John Miller, Fred Katoll. After the election some thirty members did ample justice to an appetizing lunch. A flow of oratory followed the substantial and much good feeling was promoted.

Though only three months old the club boasts of over fifty active members and the list is increasing. Meetings are held the second and fourth Fridays of each month. At the meeting held March 22 a paper on "The Parks and Trees of Buffalo" was read by Wm. McMillan, being the seventh paper enjoyed by the club. On April 12 John Miller will read a paper on "Palms," and April 26 E. S. Bartholamew, Westfield, N. Y., will give his views on overhead heating. Preparations are being actively made for the meeting of the S. A. F. here in August. Metropolitan extravagancies in entertaining members can not be promised, but strong efforts will be made to ensure a pleasant time to all attending. Several committees are already at work.

W. Scott's hobby is building. Another large house is going up.

Taken altogether the season has been a slow one. Few large party or reception calls for flowers.

James Milley says "no more second year tea roses for me!" His beds of this class resulted very unfavorably this season.

Sebastian Pickelman, Jr., has forced a few rhododendrons successfully and promises to open our eyes with more at Easter. He has a fine showing of azaleas for the same time. Good benches of HARRISII are prominent with many of our growers. "If only we can hold them back!" they all say.

Wm. Legg has re-established on Elliott street, near Dodge.

J. H. Kendle has erected houses and is starting in at Tonawanda (ten miles north from Buffalo) in a general trade.

A dealer in high art pictures going by the name of Gerald M. Dunue, a man of Hibernian extraction, recently mulcted a leading hotel proprietor here to the

tune of some hundreds, and also one of our retailers to the amount of over \$20. Beware of him fellow-florists. His movement from here was ostensibly Philadelphiaward.

As secretary of our local club, Dan Long rather enjoys a little chaffing, instead of smarting under it, and he respectfully encourages the disgruntled to keep it a going, for it promotes the "good of the club."

An impromptu flower show is in project in connection with the Music Hall Prize Fair in the week following Easter.

W. A. Griffin, of Orchard Park, a veteran grower in this vicinity, has nobly come forward in joining the local club. The "Deacon," as he is popularly known, still feels young in years and will show off as frisky as the youngest at next summer's meeting. D.

Notes From Pearl River, N. Y.

I CALLED to see John Thorpe, our ex-president, the other day and found him in good spirits, heels over head in work, and his place in first rate condition. I was astonished at the fullness of the greenhouses and the excellence of the stock considering how short a time Mr. Thorpe has occupied the place.

PEARL RIVER is a small country village, 27 miles from New York on the N. J. & N. Y. R. R., in a beautiful undulated well wooded, but nice agricultural section of the country. Mr. Thorpe's place is on a gentle slope, half a mile from the depot, and consists of a large and unusually well equipped greenhouse establishment and 26 acres of land. The greenhouses are span roofed and nine of them are over a hundred feet long each. He has also added a new propagating house. Adjoining Mr. Thorpe's place was another florist's and which contained three greenhouses, and Mr. T. has rented these and runs them in connection with his own place.

HIS STOCK consists mostly of "flowering" stuff, as roses, carnations, callas, cyclamens, cinerarias, and the like, but he also has a goodly miscellaneous assortment of plants.

CHRYSANTHEMUMS are still his friends and he has gone into them heavily. Little seedlings an inch high are abundant in pots near the glass, and thousands upon thousands of sturdy young stock of named varieties occupy the greenhouses. Near by is the skeleton frame of a temporary span-roofed chrysanthemum house 12 feet high in middle, 12 foot sash bars, and over 100 feet long. Here last fall the plants were brought and flowered. The lower part of the roof all round was covered with the spare sashes from the hybrid rose house, the upper part was covered with canvas, lowered or raised at will, and as a protection against frost four common stoves—one at each end and two near the middle—and stricks of sheet iron smoke pipes were brought into use. These are now stored in one of the sheds. Mr. T. insists that there is money yet to be had from chrysanthemum cut flowers, but these flowers must be better than an average, they must be large, fresh, bright, full and have stiff necks, and in order to produce such flowers as these we have got to give the plants good attention, abundance of food, plenty of light, and they must be disbudded.

AMONG HIS ROSES I was much impressed by the unusual vigor of Niphotos. The plants had been budded on Marechal Niel, which also had been budded on seedling briars.

F. G. HILL, was his finest carnation in bloom. And I was surprised to find both De Graw and Crimson King behaving as well as they used to years ago, for I have discarded both of them.

BESIDES the perpetual carnations he has many hundreds of the summer blooming clove carnations that are so common in Europe, but so infrequent here. He protects them in cold frames in winter, and this is the only sure means of saving them.

FREESIAS are great favorites and the flowers have fetched fair prices till recently; now he is letting the blossoms go to seed with the view of increasing his stock. The bulbs have been planted along the edges of the benches.

SOME LITTLE bantam fowls had the run of the rose houses. "Capital things they are too. They don't do any harm, but they do a great deal of good in picking up grubs and other vermin." So says Mr. Thorpe.

IN BUILDING greenhouses, be they hip roof, span roof, lean-to, or ridge and furrow, Mr. T. is strongly in favor of running them east and west with the broadside facing full to the south. And I certainly agree with him.

HE USES THE Evans' ventilating apparatus in his greenhouses and is extremely well pleased with it.

INSTEAD of growing his early roses in pots he has them in long narrow trough-like boxes—5 feet long by 5x6 inches, and several plants in a row in each box. In this way they get more soil than they would in pots, and are easier to manage in the way of watering and feeding, and the saving in the breakage of pots is considerable.

WHAT HAVE you been painting your boxes with, Mr. Thorpe? "I prepare a bath of hot lime wash with some salt in it, and when the boxes are empty and dry I dip them into this bath. It kills vermin and fungi and is a capital preservative for the wood."

SHEEP MANURE is his favorite fertilizer. For top dressing he would sooner have it than cow manure or any other kind. He gets the pure article, the cleanings from the railroad cars, and keeps it dry in a shed till required for use.

W. F.

THE DICTIONARY OF GARDENING—A supplement to this valuable work has been published and a copy sent us by the American agent, Mr. J. Arnot Penman, 44 East 9th street, New York, shows it to be a most valuable addition. It is bound in style uniform with the seven volumes of the "Dictionary" and entitled "Division VIII." Among the contents are: An index to all the genera (3512 in number) described in the work, with the names of their authors; a pronouncing dictionary of the ordinal, generic and specific names of plants described in the work; an index to herbaceous plants for special purposes; an index to the colors of flowers; an index to shrubs and subshrubs in which the colors of the flowers, height and degree of hardiness of the shrubs are stated; an index to flowering, periods covering annuals, biennials, perennials and shrubs; an index to height of hardy and half hardy herbaceous plants as a guide in planting; an index to synonyms and cross references and a list with descriptions of new introductions. This supplement is certainly a singularly valuable addition to an indispensable work and will be heartily welcomed by practical men as well as those scientifically inclined.

Catalogues Received.

Jacob Schulz, Louisville, Ky., plants; Jno. A. Balmer, Vincennes, Ind., plants; Cold Spring Seed Farm, Big Horn City, Wyoming, seeds; Joseph Bancroft, Cedar Falls, Iowa, plants and seeds; B. A. New Pure White Tea Rose The "QUEEN."

This splendid new Rose originated with us two years ago, and having proved valuable, is now placed on sale. It is

A PURE WHITE SPORT FROM SOUVENIR D'UN AMI.

A vigorous, healthy grower and continuous bloomer, producing a great abundance of Buds and Flowers all through the season. Flowers are PURE WHITE, showing no trace of Pink, makes good finely formed Buds and is moderately full. Petals are thick and of good substance, opens well, is a good keeper and very sweet. We believe it will prove especially VALUABLE FOR EARLY WINTER FORCING AS WELL AS FOR OPEN GROUND PLANTING, and recommend it for extended trial with the belief that it will be found a valuable acquisition to our list of Pure White Tea Roses.

PRICE: Strong well matured plants from 2½-inch pots, \$3.50 per doz.; \$25.00 per hundred. Two year plants from 5-inch pots, \$9.00 per dozen.

ADDRESS

R. S. BROWN & SON,

Box 99. KANSAS CITY, MO.

New York Notes and Comments.

Abutilon "Eclipse" was recently noted at Henderson's. It is a seedling which in growth and character of flowers suggests *A. mesopotamicum*, but it is very much larger and more striking. The variegation is exceedingly handsome and distinct; in fact, it may be called the handsomest variegated abutilon we have.

Mr. Klunder recently gave an opening at his new store, Broadway and 26th street, which is much larger and better arranged than his old place. It is as yet unfinished, but the intention is to arrange a pretty little reception room at the back of the store, for the convenience of customers. The exhibition at the opening was really charming, giving evidence of the fine taste for which Mr. Klunder is noted. In one window was a very large Marie Antoinette basket of silvered willow, standing on a bed of lycopodium. It was filled with an apparently careless mass of pale-tinted lilac, bordered with *Primula obconica*; Mabel Morrison roses were in the midst of the lilac, and a few sprays of lily of the valley were above. A bow of white ribbon was on the handle; the arrangement in all these pale tints had a look of exquisite purity. Another larger window had the ceiling covered with smilax, dotted here and there with cattleyas; some pillars were twined with smilax and hung with orchids. The lower part of the window was filled with plants and flowers, chiefly orchids and fine roses.

Another very showy basket on exhibition was a very large French fish basket, filled with a loose mass of yellow daffodils, with a large ruby colored sash tied around it. A charming arrangement in yellow was a tripod basket filled with yellow tulips and genista. The great charm of all the arrangements seen here was their look of natural simplicity, which was really the perfection of art. They were confined to one tint, if not one variety. The main exhibition, apart from the baskets, consisted chiefly of roses, and very fine ones; all the leading varieties were shown. It was a most charming exhibition, remarkable alike for fine flowers and for the exquisite taste displayed in their arrangement.

A very pretty arrangement was noted in Thorley's window the same day. A ground work of smilax had eucharis flowers dotted amongst it; this had a border of violets. In the center stood some large vessel (I have a suspicion that it was an everyday barrel in disguise) wearing a tremendous sash of pale lavender ribbon. This was filled with a loose mass of orchids, chiefly cattleyas, relieved by maidenhair fern. The arrangement was tasteful and the coloring was most harmonious. Florists' windows, as a rule, are now arranged with far more taste and profusion than formerly.

Mr. J. G. Esler is the happy possessor of a batch of new seedling carnations; one with the color of a La France rose has, he thinks, a future before it. We want another thoroughly reliable marketable pink carnation; Grace Wilder is not always satisfactory, though about the best yet.

Some of the patriotic florists are trying to arrange for a floral arch to be erected somewhere on the line of the procession at the Centennial Inauguration celebration. It is a laudable undertaking, no doubt, though hardly a remunerative one.

EMILY LOUISE TABLIN.

Boston.

Reports from other markets indicate a bad break in the flower trade, with little demand and ruinous prices. It is gratifying to be able to report a better state of things here. Prices have of course fallen, but the drop has been gradual and the demand has remained remarkably steady. The general verdict of florists in this vicinity is that Lent has never before made so slight an impression on their business. The quality of flowers in the market now is excellent. Jacqs and hybrids are not so plenty as they were. *Adiantums* are still scarce, and smilax is also in short supply with price advanced.

Messrs. Anderson, Taylor, Roehrs and Asmus came up from New York and made a visit to some of the prominent establishments about the Hub. The only serious obstruction they met with was a certain "stone fence" out at the Arnold Arboretum, which proved to be more than a match for one of the party.

The delegation from Boston to the annual supper of the Philadelphia Florists' Club consisted of two commission men. The fact of their being seen together gave rise to divers rumors of combinations and dangerous schemes, and an additional guard has been placed at the outer gate. In the meantime the two aforesaid commission men enjoyed to the utmost the unbounded hospitality of their Phila. friends.

Norton Bros. are showing fine specimens of Ulrich Brunner. W. J. S.

Washington.

So much was promised us in the way of floral decoration on the occasion of the inauguration ball that your readers will no doubt expect an elaborate description. These decorations we were told would "cost \$7,000" and it would "require at least seven car loads of flowers to carry out the decorator's very elaborate designs." The facts are: that the committee in charge only agreed to pay \$2,700, or about one half the amount suitable decorations for such an occasion and such a place could have been put up for. The result, as might have been ex-

pected, despite of laudations in the daily papers, is, that the committee received just about what it paid for.

The less said in regard to the floral feature of the decorations the better. The display of rare plants was meagre in the extreme and did nowhere equal what can be seen in the east room of the executive mansion at any ordinary reception. Cut tops of the crowns of our commoner variety of sabals, badly withered at that, graced(?) the seventy handsome vases arranged along the upper balustrade. The only redeeming feature was a liberal festooning with smilax and the generous supply of well made garlands of laurel. Were floral decoration confined to twining laurel around columns and festooning from every available point, then indeed no one could have found fault with the display here, but to call the "Ship of State," the "Floral Globes," "Departmental Emblems," and "Presidential Chairs" anything but abortions would belittle the profession throughout the country.

I shall therefore refrain from saying anything more than to express the hope that at future inaugurations the art in this country may be represented in a manner commensurate with the high standard it has attained. Z.

Chicago.

Cut flower trade very fair for the season. Quality not quite as good as a few weeks since. Smilax is in short supply and Jacqs not very plentiful. Other flowers are all in good supply with a surplus of some varieties of roses.

N. Singler, of Washington Heights, is cutting some of the finest Jacqs ever seen in this market. They are beauties.

Walter Kreitling will remove to 231 Wabash avenue May 1, where he has rented a large double store and basement. He will add fruits to his present cut flower business. Walter is one of the most popular "city bouquetists" and should do well at the new stand.

Chas. Reissig has returned from a trip east.

NEW YORK MARKET.—Since the beginning of Lent the commission men have been loaded right down; the market is glutted and flowers are low in consequence. Everyone is cutting a great deal of stuff, which naturally affects the market, already dull. Some fine Christys have brought \$6 a dozen since Lent began, but as a rule hybrids are cheap, like everything else. It is expected that within another week the market will materially improve. Jacq roses are very plentiful and are good; a few fine Prince Camille de Rohan are meeting with approval. Flowers generally are very good.

NOVELTIES IN FLOWER SEEDS

FOR 1889.

Offered by **John Gardiner & Co., 21 N. 13th St., PHILADELPHIA, PA.**

SHIRLEY POPPIES The most chaste and beautiful of all single Poppies. The colors are very wavy and graceful in the sun, and run through all shades of blush and white to rose and crimson. Surpassingly lovely. Packet 25 cents. See *Gardener's Chronicle* for March 9th, '89, for full history of this.

CUP AND SAUCER CANTERBURY BELL An odd and remarkable strain of this favorite old-fashioned flower, comprising great variety in color and much diversity in form and habit. Packet 15 cents.

AUBRETIA LEICHTLEINI A very fine variety with flowers of a brilliant carmine-rose; much larger and finer than any other *Aubretia*, and a welcome addition to our list of dwarf, early, spring-flowering perennials for rock work, etc. Pkt. 25c.

KALANCHOE CARNEA This promises to be one of the most valuable additions to our list of winter-flowering plants. Flowers in mid-winter, like the *Frezia*, and bears large umbels of delightfully fragrant pink flowers. Being long-stemmed and free flowering, it will make a good subject for cutting, etc. Packet 25 cents.

NEW MINIATURE SUNFLOWER This very charming sunflower was in great demand last season for cut flowers. The blooms are small, single, bright golden yellow, with dark centre. The plant covers, literally, itself with flowers from July to October. Perfection for cutting. Packet 10 cents.

SEND FOR OUR LIST OF NOVELTIES AND SPECIALTIES FOR THE TRADE.

Address all orders and communications to
JOHN CARDINER & CO.,
21 North 13th Street, Philadelphia, Pa.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

E. GRIFFITH HUGHES,
Operative Chemist,
MANCHESTER, ENGLAND.

Mr. M. B. Faxon.

My Dear Sir.

Having had the pleasure for the few past years while serving on the Flower Committee of the Mass. Hort. Society to know the excellent strain of your Asters which always carried first prizes on Exhibitions and although we do not carry on seed business yet I think it would be well for us to keep your strain of Asters as we could recommend them very highly to our customers.

Please send us one hundred packages to begin with and we hope to write soon for more.

Truly Yours
W. A. Manda

SUCCESS AT LAST!

COOK'S AMERICAN SEEDLING RED ROSE

THE UNRIVALLED SOUVENIR DE WOOTTON.

BON SILENE X LOUIS VAN HOUTTE.

BROTHER FLORISTS:

You have wanted for years a continuous blooming red rose, for culture under glass.

First, Came ANDRE SCHWARTZ, the red SAFRANO, which has proved utterly unfitted to our climate.

Second, WILLIAM FRANCIS BENNETT, the superb red bud, which at times is unexcelled. Its faults, however, we all know by this time. No one can prevent its habit of resting or its tendency to black spot. Very few can grow it with sufficient stem. Its fugitive color will always be a great drawback, and its serious lack of lasting qualities, cannot be denied successfully.

Third, Came AMERICAN BEAUTY (synonym, MADAME FERDINAND JAMAIN). That majestic flower, superb in color, in perfume, in growth, but not so free flowering, and occasionally producing defective blooms. We could not get along without it. It has had no equal among the hybrid teas for large work.

Fourth, Came PAPA GONTIER, with good shape, good color, and good foliage, but liable to crop, and with a tendency to drop its leaves, caused probably by its Bourbon parentage. This rose is an excellent shipper and keeper, but alas it has no perfume.

Fifth, Comes our WOOTTON, a genuine American Seedling, with the following good qualities:

First, Color, velvety red, equal to Jacqueminot.

Second, Perfume which cannot be excelled.

Third, Continuous flowering qualities. It has no resting period—blooms and new growth existing at the same time.

Fourth, The most prolific bloomer in existence, every shoot containing a flower bud.

Fifth, Habit, exceedingly vigorous and in foliage quite equal to the American Beauty.

Sixth, It never makes imperfect buds and dark weather but deepens the color, giving it a richer shade of crimson.

Seventh, It retains its color for a long period; flowers having been kept by us in good condition for two weeks after being cut.

Eighth, It is a full double rose, and is good in bud, half open, or fully expanded. Full open flowers frequently are six inches in diameter.

Ninth, The color is even more intense and brilliant at night than in the day.

Tenth, It is free from black spot, the great enemy of the Bennett.

Eleventh, Its shipping qualities are perfect.

Below we give you the daily record of the number of perfect flowers cut from five hundred bushes, during the month of December, 1888:

Dec. 1	148
Dec. 2	132
Dec. 3	52
Dec. 4	82
Dec. 5	153
Dec. 6	105
Dec. 7	91
Dec. 8	204
Dec. 9	36
Dec. 10	69
Dec. 11	159
Dec. 12	94
Dec. 13	113
Dec. 14	82
Dec. 15	96
Dec. 16	112
Dec. 17	156
Dec. 18	83
Dec. 19	55
Dec. 20	63
Dec. 21	20
Dec. 22	43
Dec. 23	45
Dec. 24	83
Dec. 25	90
Dec. 26	96
Dec. 27	81
Dec. 28	40
Dec. 29	46
Dec. 30	33
Dec. 31	63
Total	2731

Or on an average of 88 per day. A large portion of these blooms brought 40c. each at wholesale.

Since the first of Jan. the bushes have been disbudded to secure wood for propagation, and some days as many as 1000 buds have been pinched out. We shall bloom not less than 6000 plants during the next winter, and cast aside every other red rose.

OPINIONS OF PROMINENT FLORISTS.

JOHN HENDERSON & CO.,

FLUSHING, Dec. 11, 1888.

"This rose (Cook's Souvenir de Wootton) is among the best continuous flowering ones, being beautiful in color, form, and fragrance, which will undoubtedly commend it to all."

MRS. GEO. W. CHILDS,

January 7, 1889.

"Mrs. Childs received this afternoon, the beautiful Wootton roses Mr. Durfee so kindly sent her, and which she admires not only for their beautiful color, but for their delicious odor."

WM. J. STEWART,

BOSTON, January 8, 1889.

"The Woottons arrived in good condition. The La France, American Beauties were faded and gone, and the Puritans were brown as a bean."

JOHN BURTON,

CHESTNUT HILL, PHILA., Jan. 25, '89.

"Have just received box of roses. The Woottons are fine, and I think it cannot fail to be a profitable cut flower rose."

ROBERT CRAIG

PHILADELPHIA, PA., Feb. 5, '89.

"I think the Wootton will be a popular rose because it is such a free bloomer and so vigorous in growth. Many growers have failed to get entire satisfaction with Bennett and Beauty, but the Wootton will, I feel sure do well in almost any soil with fair treatment."

Remember, No Imperfect Flowers like the American Beauty produces.

✻ 60,000 YOUNG PLANTS FOR THE TRADE AT REASONABLE PRICES, AS FOLLOWS: ✻

MESSRS. STRAUSS & CO.

Beg to add, that they have a Large Stock of Young Plants of the following Roses at very reasonable rates:

AMERICAN BEAUTY,	ANNIE COOK,	CATHERINE MERMET,	THE GEM,	PURITAN,
PAPA GONTIER,	MADAME CUSIN,	THE BRIDE,	LA FRANCE,	PERLE.

Their PURITAN and LA FRANCE have been pronounced the finest in the United States. A complete change of stock every two years seems to be essential to continued success in rose culture under glass.

Violets.

Having been unusually successful with our violets this season we give a description of the method adopted in response to a recent query in the FLORIST.

We separated the young plants from the old ones about the latter part of September; prepared a frame of ordinary width (about 5 feet) and with sufficient good, rich soil and planted the young violets in it. Outside of this frame we placed a larger and higher one, allowing about one foot space between them, which we filled with manure to keep the frost out at the sides and ends. The outside frame was made high enough so that the sash for it were about eight inches above the sash covering the inside frame, all the sash being placed close together at the edges. The soil in the smaller frame was from an old hotbed, no warm manure being used. The plants had been outside all summer and are still there, not having been brought in the houses at all. We have had an abundance of bloom all winter and the plants show no signs of "going back" yet, being full of flowers and buds and in a fine healthy condition.

Whether the same treatment will be successful another season remains to be seen, but one thing is certain, this is the first time we have had them do so well in six years. We give our experience for what it is worth. J. H. WADE & Co. Evansville, Ind.

ROSE HILL NURSERIES,

NEW ROCHELLE, N. Y.

NEW YORK CITY OFFICE AND SALESROOM: 409 FIFTH AVE.

Mention American Florist

An Awful Blunder.

A society young man in an eastern city was the victim of a heartrending error through which a package of flowers and one of masculine undergarments were changed in delivery, the undergarments going to the lady and the flowers to the apartments of the young man. The young man's feelings were doubly lacerated by the fact that the note intended to accompany the flowers, but which was delivered with the undergarments read: "Wear these this evening for my sake."

The Suffering Tree Agent.

Confucius was full of white whiskered wisdom, and, no doubt knew how to meet most emergencies; but will venture to say that a Rochester tree agent could have tackled him on a bet that he could sell him a lot of shrubs that he wouldn't accept as a gift, and won. PUCK.

PAMPAS PLUMES.—A large California grower of pampas says: "The grass is looking fine and I think there will be a larger crop of plumes than last year. The increase will not be from the old hills, but from the new plantations that are coming in. The quality can not be told until harvest in September. Last year's crop was estimated at 1,000,000 plumes."

GREENHOUSE HEATING.

BY A. B. FOWLER.

Explains fully all the best systems of heating greenhouses by both hot water and low-pressure steam. Tells you the points to consider in selecting an apparatus. How to adjust same to various locations; gives the results of the latest scientific experiments. Shows how to compute the number of feet of pipe required for a given space; draft and other important matters.

It is highly recommended by Mr. John Thorpe and others. Postpaid, 75c.

Sent on receipt of price. Address,
AMERICAN FLORIST,
CHICAGO.

THE NURSERMEN'S ASSOCIATION will hold its fourteenth annual meeting at Chicago, beginning Wednesday, June 5, at quarters at the Grand Pacific Hotel. Chas. A. Green is secretary, Rochester, N. Y., and can furnish all particulars in regard to hotel and railroad rates. The reduction of freight rates secured by this organization last season was of great benefit to the nursery trade throughout the United States and probably the greatest concession ever made by railroads to any commercial interest.

THE STANDARD POT.—In next issue we shall publish the list of those who up to that time have signified to us their intention to buy only standard pots in future. Many new names have been received since the list was last published. Send in your name now to be added to it in time for next issue. All should avail themselves of this opportunity to show manufacturers the necessity of conforming to the standard.

Spring Exhibitions.

Philadelphia.

The Pennsylvania Horticultural Society held its spring show on April 2 to 5 inclusive. To the credit of this time honored institution it must be said that for the number of meritorious exhibits, and the quality of the same, it was the best show ever held at this time of the year. There were even more orchids than last year, and the roses were the finest ever seen in Horticultural Hall. The dinner table designs were a new feature at spring shows. The Lenten season was possibly responsible for the number and quality of the flowers and handsome designs. Azaleas and cinerarias made the hall gay with their coloring, as also did tulips and hyacinths. The latter added just enough fragrance to be agreeable without being oppressive, and the music was the best obtainable in this city. Yet, withal, the attendance was less than can be remembered in the history of the society.

The premiums were awarded as follows: 1st, \$100, for the best collection of orchids (plants) in bloom to Pitcher & Manda, Short Hills, N. J., 2nd, \$75, to Siebrecht & Wadley, New Rochelle, N. Y., 3d, \$50, to David Emery, gardener to Charles Dissel, Esq., Wyndwood, Pa.; 1st \$15 and a special \$5 for three orchid plants in bloom to William Jamison, gardener to R. S. Mason, Esq., Germantown, Pa.; 1st \$25, for orchid blooms to Pitcher & Manda, 2nd \$15, to Evans & Battles, 3d \$10, to Siebrecht & Wadley. The arrangement of the collection of orchid blooms from Evans & Battles deserves more than a passing notice. A cave or grotto was very artistically decorated with the flowers and the light and airy asparagus or "Mermaid's Hair," making just such a place one would imagine fairies would delight to sport about in.

1st premium, \$20, for 6 azaleas to W. K. Harris, 2nd, \$15, to Fred R. Sykes, gardener to Mrs. Harry Ingersoll, 3d, \$10, to Hugh Graham's son William; 2nd premium, \$8, to F. R. Sykes for 2 azalea plants; 1st, \$8, to Hugh Graham's Son for specimen white azalea, 2nd to F. R. Sykes; 1st, \$8, for specimen any color, to David Emery, 2nd, \$5, to Hugh Graham's Son, 3d, \$3, to F. R. Sykes. Strange as it may seem, although liberal premiums were offered for zonal pelargoniums, not one plant was exhibited, and only two fuchsias. David Emery secured 1st prize for specimen plant, \$4, and 2nd went to Gebhard Huster, gardener to Mrs. Jane C. Heyl, Darby, Pa.; collection of 25 plants in bloom, different varieties, Hugh Graham's Son received 3d premium, \$10.

In the class for "decoration of growing plants not to occupy over 100 square feet," there were two competitors. These decorations occupied each side and at the

foot of the stage, so that both exhibitors had equal advantages; 1st, \$50, was awarded to William Joyce, gardener to Miss M. L. Baldwin. Every plant in the collection was a "specimen." In the center of the group was one of the best plants of *Kentia Belmoreana* in this country, but if I am not mistaken it was labeled *K. Forsteriana* when on exhibition last autumn. Who is an authority on palms? It would be well to have some of these matters cleared up. Second, \$30, went to Hugh Graham's son; the same exhibitor was awarded 1st, \$25, for "roses in pots, 12 plants, not less than 6 varieties," 2nd, \$5, to William K. Harris for a specimen rose; 1st, \$15, for 12 ferns to Thomas Long, gardener to A. J. Drexel, Esq. This exhibit was a credit to Mr. Long, who is one of the best cultivators in this vicinity; 1st, \$5, for a specimen fern to Robert Wark, gardener to Clarence Clark, Esq.; 2nd, \$3, to David Emery, gardener to Charles Dissel, Esq.; 1st for 12 carnation plants to Edward Banyard & Son; 1st, \$10, for 6 hydrangeas to W. K. Harris; 1st for specimen hydrangea to the same exhibitor—a few years ago efforts were made to have the hydrangeas blue, now the trouble seems to be to keep them a bright pink; 1st, \$3, for *Astilbe Japonica* to W. K. Harris, 2nd to Hugh Graham's son, 3d to Thomas Long; 1st, \$10, for 12 cinerarias to Thomas Long—these were a well grown lot of plants, but the varieties were very poor; David Emery secured 2nd and Gebhard Huster 3d; 1st for 6 amaryllis to Hugh Graham's Son; 1st for 25 pansy plants to Fred R. Sykes, 2nd to W. F. F. Murray, Atco, N. J.; 1st for 6 *Chrysanthemum frutescens* (Marguerites), to W. K. Harris; 1st for English or hybrid primroses, to Hugh Graham's Son, 2nd to W. Craigmile, gardener to Miss S. M. Wain; 1st for daisies (*Bellis perennis*), to W. K. Harris; 1st for *Primula obconica* to Pitcher & Manda, 2nd to Wm. Craigmile, 3d to Hugh Graham's Son; 1st for 6 cyclamen to Walter F. Faucourt, 2nd to W. Craigmile—the plants exhibited by Mr. Fancourt were the best ever exhibited here, the foliage was dwarf and compact and the flowers were numerous and long in stem; for 6 *calceolarias*, 1st to Gordon Smirl, gardener to W. M. Slingerly, Esq., 2nd to W. Craigmile—the judges were so well pleased with Mr. Smirl's *calceolarias* that in addition to the 1st premium a special notice was bestowed upon them, which was richly deserved, they were indeed fine as to variety and the plants were exceedingly well grown; 50 bedding plants in bloom in not over 4-inch pots, 1st, \$10, to Gebhard Huster; special premium was awarded to David Emery for 6 plants of *mignonette*, and the same honor was awarded F. R. Sykes for a collection of flowering plants.

The gold medal offered by "The General Union of Holland for the promotion

of the cultivation of bulbs under the patronage of the King of the Netherlands," for the best collection of 50 hyacinths in bloom grown in pots not more than two of a sort, was awarded to William Jamison, gardener to R. S. Mason, Esq., 2nd, silver gilt medal, to Henry Surman, gardener to E. W. Clark, Esq., Germantown, 3d, silver medal, to Fred R. Sykes, gardener to Mrs. H. Ingersoll, Oak Lane. First prize, silver gilt medal, for tulips, early single, 25 pots, 3 bulbs of the same sort in a pot, 25 distinct sorts, to William Jamison.

The Pennsylvania Horticultural Society's premiums were awarded as follows: 1st, \$10, for 25 hyacinths, not more than two of a kind, in not over 6-inch pots, 1st to Henry Surman, 2nd to William Jamison; 12 hyacinths, 1st to Henry Surman, 2nd to W. K. Harris, 3d to William Jamison; for tulips, 6 varieties, 6 inch pots, 6 of a kind in each pot, 1st to William Jamison, 2nd to W. K. Harris; 1st for a box of tulips containing 50 bulbs in bloom, to W. K. Harris, 2nd to W. Jamison.

Premiums were offered for hyacinths grown in glasses, the object being to encourage lady exhibitors, but there were no entries. 1st for 6 *Lilium Harrisii* went to Hugh Graham's Son, 2nd to Albert Smith, gardener to Mrs. Mary Wharton; 1st for *Lilium candidum* to William K. Harris; specimen *lilium*, any variety, to William K. Harris, 2nd to Hugh Graham's Son.

In the growers' list Joseph Heacock received 1st for collection cut carnations, and best dozen each of cut roses Sunset and Cusin, 2nd for Perle, Bride and Am. Beauty; Coles & Whiteley 1st for Perle, Bride, Gontier, Mermet, Bon Silene and Magna Charta, 2nd for La France, Cusin and Mrs. John Laing; John Burton 1st for Jacqueminot, Mme. G. Luizet and Baroness Rothschild; C. S. Price 1st for Niphetos, 2nd for Mermet; C. F. Evans 1st for La France, any other variety (Meteor), Mrs. John Laing, Puritan, 2nd for Gontier, Sunset and Jacqueminot; Gordon Smirl 1st for American Beauty, 2nd for Puritan; C. Strauss & Co., Washington, D. C., 1st for 6 of any new variety (Souvenir de Wootton); E. Banyard & Son 2nd for collection of cut carnations.

In the florists' list Pennock Bros. received 1st for collection of cut carnations, dozen blooms each of Bennett, Sunset, American Beauty, Mme. Cusin, 2nd for Perle, Niphetos, Magna Charta, Mermet, Jacqueminot and Mme. Gabriel Luizet; Heron & Nisbet 1st for Mermet, Mme. G. Luizet, Mrs. John Laing, Bride, 2nd for Puritan; H. Graham's Son 1st for Perle, Niphetos, Gontier, Magna Charta, 2nd for Am. Beauty, La France, Mrs. John Laing, Bride and Sunset; Evans & Battles 1st for any other variety (Meteor), La France, Jacqueminot, Puritan, 2nd for Gontier; J. Kift & Son 1st for Baroness Rothschild.

For basket of flowers H. Graham's Son received 1st, \$15; Heron & Nisbet 2nd, \$10; Evans & Battles 3d, \$5; 6 corsage bouquets, Heron & Nisbet 1st, \$10; plateau of flowers (20 inch basket) Heron & Nisbet 1st, \$10; bride's bouquet, H. Graham's Son 1st, J. Kift & Son 2nd; pair bridesmaid's bouquets, H. Graham's Son 1st, \$10; vase of roses, Heron & Nisbet 1st, \$10, H. Graham's Son, 2nd, \$5; dinner table decoration, Pennock Bros. 1st, \$75, H. Graham's Son 2nd, \$50, J. Kift & Son 3d, \$25.

Charles Fox made a fine display of foliage plants in the center of the hall, which added greatly to the general effect.

Thomas Weathered's Sons' exhibit of one of their portable greenhouses—which

is set up ready for operation in a few hours, heating apparatus included—was the novel feature of the show, and consequently attracted much attention. If there were more of such structures scattered throughout this country there would be a better attendance at the flower shows, because the people would appreciate such a show if these educational greenhouses were more in use. Craig & Brother filled the greenhouse with a creditable collection of plants.

John Burton is the only grower cutting "Baroness Rothschilds" at this time and they are the finest that have been seen in this city for some years past.

EDWIN LONSDALE.

Boston.

The spring exhibition of the Mass. Horticultural Society was held on March 27, 28, 29.

On account of repairs now in progress the upper hall could not be used, so the show was confined to the lower hall. The crowding was not so objectionable, however, as it would have been in an exhibition of tropical and show plants, since the hyacinths, tulips and other things which go to make up the spring shows, look full as well when closely massed, and the gorgeous display of color so obtained is most acceptable to the eye after months of winter dreariness.

The Holland medals competed for in former seasons were not offered this year, and the incentive to the exhibition of large quantities of Dutch bulbs was lessened just so much. But the display as a whole was very creditable. The principal competitors in the bulbous section were K. Findlayson, gardener to Dr. Weld, Wm. Martin, gardener to N. T. Kidder, E. W. Fewkes and Thos. Clark. The hyacinths and tulips in pots and pans shown by Mr. Fewkes, Mr. Martin and Mr. Findlayson were unusually well grown. Thos. Clark excelled in *Polyanthus Narcissus*, jonquils, anemones and freesias.

The first premium for general display of spring flowering bulbs was awarded to Mr. Clark, and the second prize for the same to Wm. Martin. Mr. Martin showed fine pots of lily of the valley and Mr. Findlayson well grown *Harrisii* lilies. The cyclamens from Mr. Clark and Mr. Findlayson were also very good.

The Lyman Plate for six distinct Indian azaleas was awarded to Mr. Martin and Mr. E. W. Gilmore captured both first and second Lyman Plate premiums for orchids. The society's prizes for azaleas were won by Mr. Findlayson, A. W. Spencer and Wm. Martin, and those for orchids by Benj. Grey. Two very fine irises were exhibited, the noble *Iris Susiana* by E. W. Fewkes, and the tiny jewel *I. pavonia* (Peacock Iris) by Mr. Findlayson.

One of the prettiest features in the hall was the display of *Primula obconica* and *Cocos Weddelliana* from the New England Nurseries. The arrangement of these was exquisite.

Mr. J. Brydon, gardener to N. S. Simpkins, exhibited a lot of forty-four blooms of Her Majesty, Baroness Rothschild and Merveille de Lyon roses which have never at any season of the year been excelled here. On hybrid perpetual roses James Comley took first prize with a very nice collection, and Thos. Meade was equally successful with tender roses. His Brides, Cooks and Niphetos were exceedingly fine.

The hardy primulas are becoming very popular here and the specimens of them

shown by E. W. Fewkes, Wm. Martin and Wm. Patterson must certainly help to increase their popularity. They were the best ever seen here. The cinerarias from Mr. Martin and Thos. Clark were also unusually good.

Mr. Zirngiebel was on hand with his superb pansy blooms and as usual distanced all competitors. F. C. Fisher showed some very fine carnations, T. Rowland well grown Mignonette, John Irving some good deutzias and assorted plants, and Pitcher & Manda a collection of cut cypripediums and other orchids.

The new rose Souvenir of Wootton from Strauss & Co., received a certificate of merit.

On the stage at the rear of the hall were some enormous specimens of the Umbrella Pine and rare cupressus from Temple & Beard, and varieties of cytisus from Wm. Martin. In the center of the hall was a large and interesting collection of violas, aquilegias, trilliums and other hardy spring favorites from the Harvard Botanic Garden. An extensive display of oranges from O. P. Rooks, Florida, attracted much attention.

Messrs. Norton Bros. won first premium for table design and Mrs. A. D. Wood second. In making the awards on designs the committee invited opinions from a number of prominent society ladies who were present, an innovation worthy of being repeated.

Among the visitors from a distance were J. N. May, President of the S. A. F., John Burton, of Philadelphia, W. A. Manda, of Short Hills, N. J., Robt. Hogg, of Providence, R. I., and E. S. Haskell, of New Bedford.

WM. J. STEWART.

Detroit.

The "Flower Show" which occurred April 2-5 at Detroit, was remarkably successful financially and the floral display was certainly excellent, especially for a first attempt—this being Detroit's first floral exhibition.

The enterprise was started and managed by Mr. W. H. Brearley, proprietor of the *Detroit Journal*, who had called to his assistance ladies interested in twenty of the city charitable organizations, one representative from each of these organizations forming an advisory board of managers. In this way the personal following of all of these ladies and their friends were interested in the success of the undertaking. This with the extensive advertising the manager was enabled to give the affair through his paper resulted in an attendance which was certainly remarkable, over 4,000 admission tickets being sold at the box office the first day and evening, over 8,000 the second day, and 11,000 the third day, the tickets being sold at 25 cents each.

The exhibition proper occupied the center of the large rink, while around the walls on three sides were the booths of the various charitable organizations, each of which had for sale some variety of flower. The plants shown were all placed on the floor on beds of sawdust. A long center bed was filled with the exhibits of palms and decorative plants of Messrs. S. Taplin, John Breitmeyer & Sons and B. Schroeter. Mr. Taplin's exhibit was the most extensive and all were very tastefully arranged. Large beds of hyacinths, tulips and other bulbs were very effective, Jno. Breitmeyer & Sons having the largest display in this line. A group of very large azaleas shown by S. Taplin, a "carpet bed" of succulents by B. Schroeter, a very hand-

somely arranged bed of azaleas, roses, geraniums and hydrangeas by F. W. Lemke, a very large bed filled with miscellaneous plants, including decorative and blooming plants by the Detroit Floral Co., and a bed of roses and geraniums by Halznagel & Noel were very effective and well placed to aid the general effect.

A table along one side of the hall held the entries of designs and cut flowers, and a gallery at one end was devoted to the table decorations. The most taking feature among the cut flowers was a very pretty display of cut orchid bloom brought from Cincinnati by Mr. B. P. Critchell. The crowd which was always to be seen around this display shows the interest the general public takes in this class of flowers. Some forty varieties were represented, mostly dendrobies, lycates, cyrtipedes, oncidiums and odontoglossa.

Among floral arrangements the rooms containing the table decorations were the greatest attraction. There were four entries and all were very effective, undoubtedly largely due to the fact that the elegant furnishings of each room harmonized perfectly in color with the flowers used. This matter was arranged for the florists by one of the ladies connected with the management who ascertained from each florist the prevailing tint of the flowers he intended to use and

then selected the furnishings of the room to harmonize with them. Taking the decorations of the whole room into consideration that decorated by D. C. Jones was certainly first. The mantel arrangement was a most artistic piece of work. At one end was a small palm and a few cycas leaves from which extended an extremely graceful arrangement of ferns, Rex begonias and asparagus to the other end over which drooped a dozen handsome Jacq roses. His table decoration consisted of a low centerpiece of Jacq roses tied in the center with broad cream colored ribbon, and favors of the same roses. The Detroit Floral Co.'s arrangement was in pink flowers and was certainly a harmony in color. Both the table centerpiece, favors and mantel banking were of Mermets, the table and mantel being very effectively draped with Asparagus plumosus. Jno. Breitmeyer & Sons had two arrangements, one of American Beauty roses and the other of Perles and Niphetos.

Among designs an urn of ivy leaves with a bunch of roses on its face and filled with Harrisii lilies was very handsome; it was arranged by B. Schroeter, as was also an Easter design which was a framed ivy panel bearing in relief a lamb very accurately worked out with carnations and spirea (the latter giving it a remarkably natural woolly appearance), holding a cross of scarlet geraniums.

The frame was of smilax and asparagus with bunches of various flowers placed at effective points. A baby gift arranged by D. C. Jones was a cushion of carnations bearing a pair of baby's shoes of violets, and knots of small flowers at the corners of the cushion. It was a very dainty arrangement. A very pretty thing also arranged by Jones was a small screen of white with a frame of crimson carnations. Across the lower edge was a very simple and graceful arrangement of ferns and Marguerites in which nestled a small bird on its nest. The design symbolized "Spring" in a very happy manner.

In one of the galleries the Detroit Flower Pot Manufactory had a very extensive display of standard pots of very excellent quality, and John Petzholt an excellent exhibit of florists' wire work.

Following is the awards of first premiums:

D. C. Jones—Baby gift, table decoration.
B. Schroeter—12 cinerarias; original design; Easter design; arrangement of carpet bedding plants.

Jno. Breitmeyer & Sons—Begonia (Rex), 6 plants; fern (pteris), 6 plants; Marguerites, general display; spiraea, 12 plants; general collection of flowering bulbs; hyacinth (Dutch), 12 plants; jonquil, 25 plants; lily of the valley, collection of 50; tulip, collection; carnation (red), 50 blooms; Lilium Harrisii; mignonne, 50 blooms; pansy, 100 blooms; roses, general collection; rose (American Beauty), 12 blooms; rose (hybrid perpetual), 12 blooms; tulips, general collection; decorative plants, general display.

A. Breitmeyer—Begonia (blooming), 6 plants.

Geo. Hancock, Grand Haven—Carnations, white, 50 flowers; carnations, largest variety.

Fred W. Lemke—Azalea, 12 plants in 6 to 8-inch pots; rose (hybrid perpetual), 6 plants.

Charles Warneke—Hanging plants, best collection; coleus, 25 best; pair hanging baskets; pair window boxes.

J. F. Sullivan—Camellia, general display; camellia, finest; camellia 12 flowers; rose (Bon Silene), 12 blooms; rose (Bride), 12 blooms; rose (Perle), 12 blooms; rose (Sunset), 12 bloom.

Detroit Floral Co.—Candidum, 6 best; hydrangea, 6 plants; hydrangea, 3 plants; spiraea, 6 plants; hyacinth (Dutch), 25 plants; hydrangea, finest; calla, 6 flowers; candidum, 6 spikes; rose (Niphetos), 12 blooms; basket of flowers; table decoration; best arranged lawn vase.

Holznagel & Noel—Geranium, 12 plants of 6 kinds; geranium, 6 plants of 3 kinds; geranium, best general display; rose, hybrid perpetual, 6 plants; geranium, finest; lily of the valley, 25 sprays.

S. Taplin—Calla, 6 plants; fern (adiantum) 6 plants; Lilium Harrisii, 12 plants; palm, largest and best group; palm, 12 in 6 to 8-inch pots; azalea, finest; azalea, 6 plants in 8 to 15 inch pots.

G. H. Taepke—Carnation (red), 12 plants; carnation (white), 12 plants; rose, everblooming, 12 plants; rose, everblooming, 6 plants.

Grevillea Robusta.

The purpose in calling attention to this beautiful plant is that it may find its way into general cultivation as an ornamental pot plant for house decoration. It has been grown for several years in California as an ornamental shade tree, planted on the lawn or along the sidewalks of the beautiful homes of that state as we would plant maples in Pennsylvania.

The grevilleas are natives of Australia,

most of them shrubby in habit and with leaves differing greatly in form. *G. robusta* is a vigorous tree reaching a height of 60 feet and more, it is commonly known as the "Silk Oak" in its own country. The leaves are over one foot long and eight inches broad at the widest part, they are twice pinnatifid or almost pinnate-pinnatifid with lanceolate acute segments, in all appearances like the compound fronds of a fern; they are alternate on the branch and not deciduous, which fact makes the plant doubly beautiful.

This notice is written (Jan. 10) from a specimen two feet high that was raised from seed sown April 4 of the previous year and every leaf formed since the seed leaves appeared are still upon the plant looking fresh and green. The curved drooping habit of the frondose leaves is a very graceful feature of the plant. The plant grows with a straight upright stalk and no branching until it has gained considerable height, but by "pinching" out the head it can be made to throw out lateral branches at any height desired. For pot culture, to which we would be confined in this latitude on account of low winter temperatures, a plant headed back at two or three feet would soon form a specimen foliage plant that would command as much admiration as a stately palm or spreading tree fern, and be as useful for parlor or stage decoration.

The plants do not bloom until they have become quite large, so that this element of beauty can not be counted on with confined roots. The flowers are produced in profusion and prominence on the trees, arranged in flat panicles about the size of one's hand, and are of an orange yellow color. Seeds are produced quite freely and by this means the best plants are propagated, although I think that cuttings will strike root in sand. The plants seem to be of easy growth in a greenhouse, and several good specimens that have lived in the dry atmosphere of a parlor heated by steam for the last four months show little or no check in their growth and promise to give continued satisfaction.

The grevilleas were so named by Mr. Robert Brown in honor of the Right Honorable Charles Francis Greville, an English promoter of natural history.

State College, Pa. GEO. C. BUTZ.

The Narcissus.

Last fall some seventy varieties of narcissi were sent us by Thos. S. Ware, Tottenham, London, Eng. Coming too late to be planted out of doors, Mr. C. J. Stromback, head gardener at the Lincoln Park greenhouses, Chicago, kindly took charge of them, potted and plunged them in frames and now a dozen or fifteen varieties are in bloom and most of the remainder in bud.

Of the varieties already in bloom Henry Irving and Golden Spur are the largest blooms, and they are certainly handsome flowers, rich golden yellow in color. Obvallaris (the Tenby daffodil), while smaller in size is very distinct in shape and color and a very attractive flower. Among the other varieties in flower are pallidus præcox, Golden Plover, nanus, Blondin, princeps, rugilobus, cernuus and others. We shall probably give illustrations of some in later issues.

ILLUSTRATION HORTICOLE.—The last number of this handsome publication contains colored plates of *Cypripedium* X *Maesereelianum* hort. and *Impatiens* Rodigasi L. Lind.

In cool houses with temperature 45° to 65° from November 1 to March 1 orchids are easy to manage, provided proper houses are used for them, and they need not necessarily be expensive ones. Some growers prefer a northern aspect for the cultivation of *Odontoglossum crispum* and *pescatorei*, I have seen them the acme of perfection in such houses, but I am not certain that they produce as many flowers as they would with a little more of the direct influence of the sun's rays. I will, however, give my experience.

About five years ago in one of my crazy orchid fits I started to build a cool house for the cultivation of *Odontoglossum crispum*, *O. pescatorei* and other cool plants, such as *Cœlogyne cristata*, *Cypripedium insigne*, *Lycaste Skinneri*, etc. A house that is suitable for the cultivation of the plants named is a good place to rest or retard such plants as *Dendrobium nobile*, *D. Wardianum* and many of the *lælias* and *oncidiums* which can be suspended from the roof above the odontoglots; the moisture necessary for the odontoglots will be sufficient for the plants above and will keep them in a fine healthy condition, and they can at any time be removed to the forcing house in batches to suit the requirements of the cultivator, whereas if kept in a warmer temperature direct watering would be necessary to keep the bulbs from shriveling and consequent damage from decay. Many of these plants when growing will stand a very high temperature and plenty of moisture, but in their resting season will stand almost any amount of cold, provided you do not use water injudiciously. I could not find a place to suit me with a northern aspect, but I had just a nice spot for a house span roofed, aspect southeast and northwest, and as I had for many years previously grown good stove plants and some orchids, such as *cypripediums*, *vandas*, *ærides*, etc., in what I will call a "dug out" house.

I commenced by digging out two trenches 2 feet 3 inches wide by 2 feet deep for paths, leaving a center of solid soil 5 feet wide. From the outside of the paths (about 3 feet 6 inches) post holes were dug at regulation distances and 3 feet 6 inches deep. Good strong cedar posts were used and left 1 foot above the surface for the purpose of a hollow wall. I then selected some yellow pine 8 inches square and had them cut through at opposite angles, then laid the wide side on the post, cutting out the end of the sash bars to fit the angle, I use good sized bars placed one foot apart and put at a rather steep grade, as I have an idea that it ventilates easier and gives you very valuable space in the roof to suspend either resting, retarding or flowering plants without being at all detrimental to the growths of the odontoglots that are grown on the benches.

The benches are of soil covered with a thin coat of cement; over this is placed rackwork 4 to 5 feet long, so that they can be easily moved to clean the bench

when required and allow a circulation of air, which is most essential for the cultivation of all the orchid family. Between the rackwork and the bench copious waterings on all fine days, winter and summer, is given. I think fresh water put on the cement benches every day is far ahead of water tanks and stagnant water. I think clean benches, clean water and clean pots are three things that should be strictly enforced in all orchid culture. From November 1 to March 1 the glass is kept perfectly free from shade of any kind and about the turn of days the sun creeps in and seems to enliven the foliage and in a few weeks the foliage on many of the crispums and *pescatoreis* looks about the color of a copper beech.

When I first cultivated the odontoglot I was afraid that I had injured them by this treatment, but on careful investigation and noting their different growths I find all those that take on this color are the most robust and healthy plants and have stronger bulbs and better spikes of bloom. About the time (this year early in March) the sun gets strong I shade with white lead and naphtha on the south side, which answers till the weather gets warm and the sun very piercing, then I put on shades made from cutting $\frac{3}{4}$ pine board into thin strips and making shades about four feet wide to shade the whole length of the glass roof; this remains till the autumn. These shades I find keep down the temperature and admit plenty of light and air, which should be given when possible at all seasons of the year through the ventilators at top and bottom.

Water should be given sufficiently to keep the sphagnum in a growing condition; it is generally the case that when the sphagnum grows well the plant does well also, provided it is a healthy plant. When the growth is well up and the weather so warm as to give all the ventilation possible, they (the odontoglots) enjoy copious showers of water two or three times a day. But the plants must be well drained; three-fourths of the pot should be filled with good clean drainage, over this and raised two inches above the rim of pot, use good clean fine fern root free from dust or soil and at intervals (if a 5 or 6 inch pot) of two or three inches place some nice heads of sphagnum that have been collected in the openings or margins of the woods; it often can be found with a reddish brown look and short, this kind, if placed in clumps of a dozen or fifteen heads, will be pretty sure to grow and in a little time make a very pleasing appearance. If sphagnum is used in a chopped state most of it will decay in a short time, and if allowed to remain long in the pot it will sour and become just what the root of the odontoglot abhors. I think too much pot room and consequently too much potting material (unless intense care be taken) will prove very injurious to odontoglots of all varieties; they seem to revel in fresh moss, fresh air and healthy moisture and on the other hand to revolt at dirty pots, sodden potting material and a close and warm atmosphere.

In the center of this house is a solid bed 5 feet wide and about 15 inches over this is a board bench. On the top of this, 15 inches above the bench, is raised a narrow bench for such plants as *lycates*, *cœlogyne*, etc. On either side of this and wide enough to arrange two deep, is a rackwork to stand the odontoglots as they show their bloom spikes; then in the front on the bench proper all kinds of plants such as *Cypripedium insigne*, *Oncid. Forbesi*, *O. Rossi* and others.

DENDROBIUM NOBILE.

Under the bench are the 4-inch pipes for hot water (I do not like steam for orchids).

I have an idea that it brings up the spike more gracefully when in the center of the house and consequently nearer the light and a little warmer; and being a little drier than on the side benches the flowers keep longer and come out a little finer too. My mode of watering is with a hose; water is taken from a pond two miles distant (city water), and on fine days in their growing season the floors and benches are flooded two or three times each day. *Odontoglossum grande*, *O. Insleyi* and that tribe of *odontogloss*, also the new and beautiful *O. Harryanum* like a little warmer temperature and I think a little drier house or place in the warm end of the *odontoglossum* house proper, giving more rest after flowering than is required by the *O. crispum* and varieties of that kind.

I really think the *odontoglossum* should be grown in much larger quantities in this country, as I know from experience that they are of the easiest possible culture and are so satisfactory and remunerative as to commend themselves to all lovers of beautiful and graceful flowers, suitable alike for the embellishment of the plant conservatory and for all kinds of choice decorations.

Utica, N. Y.

WM. MATHEWS.

Dendrobium Nobile.

Truly, the most noble of dendrobies. The illustration is from a plant grown and flowered by Norton Brothers of Boston. They exhibited the same at the Massachusetts Horticultural Society's show last spring, and received a well earned gold medal. At that time it had over one thousand blooms, their beauty

being much enhanced by an abundance of its growing bulbs, and glossy evergreen foliage. They grow it part of the year in one of their rose houses, and Mr. Norton says "We are going to see it again this year in as good form."

Dendrobium nobile can be grown in a mixture of fern-root fibre, sphagnum moss and pieces of charcoal, firmly planted in well drained pots or baskets, but the pots should not be too large; a little plant in a big pot, or basket, is sure to grow less under any circumstances. A healthy dendrobe is generally three or four times larger to the eye than the space where the roots are confined; those grown in pots ought to be in a low house near the glass, while those in baskets can hang from the roof of a large house. Water sparingly until the young bulbs are up a few inches, at the same time the young roots will be active. Through the summer months they can be watered and syringed over with the hose, in bright weather twice a day if the water is not extremely cold. They like to be somewhat dry once a day, with very little shade only in the early summer when the young growths are soft, are fond of lots of air, but at the same time do not permit the east wind to blow in on them while growing. In the fall after they have finished their growth a house with a temperature suitable for carnations will be sufficiently warm for them, until they show for flower, when they may be brought into a warmer house, and forced as they are required.

Dendrobium nobile is the best known, easiest to grow and is an evergreen besides, which makes it the most beautiful of all our dendrobies. Our good friend and plant lover Mr. Menand, of Albany, says: "If I had my choice and could

only get but three orchids I would have all three *D. nobile*. Like most other orchids *Dendrobium nobile* has a great many varieties. Although all are beautiful, some are exceptionally so. There are many rare, high priced and high colored varieties, yet like the original type, all of these are of easy growth. *D. n. nobilium*, *D. n. elegans* and *D. n. Sanderiana* are the three brightest I have seen; *Cooksonia* is the most curious sport, with lips on its petals. I purchased from a London firm two years ago a plant of *D. n. nobilium* with three bulbs five inches long and one lead an inch long. This plant has now four leads, one of them twelve inches long. It is at the present time in bloom, and shines like the evening star among the others. Some extra varieties have originated among collections throughout the United States, such as *Eyerman's* variety and *Sheppard's* variety, the latter being in the way of *Wallachianum*. A variety recently imported from its native habitat, was shown at the New York orchid show last year, with deep amethyst purple on the tips of its petals.

Our worthy Secretary W. J. Stewart says he has got a plant of *D. nobile* that he has been growing for two years in his dwelling house, showing flower. As this is something unusual he should write and tell us how he does it.

Mt. Auburn, Mass. DAVID ALLAN.

Forcing Shrubs.

A. W. M.'s letter in March 1 issue about lilac flowers from branches placed in water is very interesting. I have not succeeded with lilacs, but have had *for-sythia*, *Pyrus Japonica* and apple blossoms in winter from twigs put in water and left to themselves, and have had red

hawthorn nearly out. The forsythia bloomed beautifully—as freely as in its natural state—but the apple blossoms and *Pyrus Japonica* were rather pale and small.

T. M. CLARK.

Boston.

Summer Care of Carnations.

The summer care of carnations and lifting the plants to go into winter quarters is of more importance than the care of the plants after they are housed.

So much depends upon the condition of the plants during April, May and June that perhaps a brief account of my experience in the preparation of winter flowering plants, although worth little in itself may result in bringing out some valuable papers on the subject by others.

As soon as cuttings are rooted, about the first week in February or earlier, transplant into shallow boxes two inches apart either way, lower the temperature gradually and about March 25 if the weather is fair put them into cold frames. About April 20—the time for planting out—I find the plants have completely filled the boxes with roots; to separate properly shake the boxes while holding at an angle of 45 degrees, the plants will fall apart with their own roots.

The most rapid growth and finest plants can be obtained by selecting a light rich soil and giving plenty of room, three feet from row to row and one foot in the row is a good distance; this allows for cultivation with a horse, and not only saves labor, but must be practiced if you wish to grow good stock on light soil. Those who think 1 by 3 feet too much should remember that 14,520 plants to the acre can be grown at this distance.

The carnation, although needing continual moisture and frequent syringing in sunny weather, does not attain its highest state of perfection if the soil remains wet for any length of time; the very fact that the disease appears during the dampest and darkest month in the year (November), and the disease being a fungus growth proves this, also a peculiar blue tinge the plants assume. I very much doubt if a commercial florist can select any better soil for carnations than what might be styled sand well enriched. In this we have a combination of advantages—early planting, rapid growth, and lastly, a soil we can dig into at any time wet or dry.

The advantages of a sandy soil for carnations does not stop with the outdoor care, let us follow the plants to the greenhouse. Eleven years of experience proves to me that plants bedded in a rich sandy soil give twice as many long stemmed carnations, a point not to be overlooked by the commercial florist. The nature of rich porous sandy soil is to push a crop along, the nature of a clayey soil is to dwarf; hence the plants in the heavy soil may perhaps be more heavily loaded with buds, but what is the use of sacrificing so much side growth to get long stemmed bloom. If roots of anything can ramble easily and freely in the soil the top will also spread quickly. I have seen a splendid crop of stock plants for winter bloom stay in the ground week

after week, after it was time to lift them; there had been no rain for some time and as the soil was of a clayey nature and packed like a brick I could see at a glance that my neighbor must lose his crop either from frost or loss of root if he attempted to take them up.

He who selects a sandy soil and gives the plants plenty of room can laugh at a drought. The careful reader will notice how much earlier all growers move in their stock now than ten years ago, showing plainly that the plants must be established before getting good flowers.

The exact time for lifting carnations can not be given, it depends entirely upon the weather—some time during August for the main crop, as early as July for the very early bloom, and all plants should be in by the 7th of September, but choose a dry sunny time for moving the plants. Such advice as this has been laughed at and more than once I have been compelled to swallow a pitiful humiliating smile from some brother florist as he asked me, why? Because, after three or four weeks of dry weather both roots and foliage are in a semi-dormant condition, and when moved into moist and shaded quarters at such time start into growth at once and do not wilt.

I generally have two men in the field when I lift the plants, and as fast as one digs them up the other plunges them into tubs of water, as soon as the tubs are full of plants both men take them out and shake dry soil over the roots, the dry soil completely covers all the roots and the plants are moved safer than in any other way.

Pruning should be begun early and done often, but be very careful when the plants are more than half grown. Leaf pruning is better than stem pruning. Cut off the tops when three or four inches high, about three weeks after they are boxed off; the center leaves will soon push up, nip them again, it is better to trim often than to butcher the plants at one slash to save time. I seldom prune later than July 1, and never cut off the tops when moving into the houses. If any pruning must be done cut off a whole branch and cut well down into the hard wood. The flower stalks should be well started when the plants are lifted, and if the treatment of moving the plants I have set forth is practiced, those in bud and bloom can be moved with hardly any perceptible difference in their appearance.

THOMAS L. BROWN.

Grandville, Mich.

Carnation May Queen (Syn. Fred. Johnson.)

When I wrote my notes on carnations which appeared in the *FLORIST* March 15, I little suspected that Mr. John Thorpe was lying in wait to demolish me, but such seems to have been the case. However, I gladly raise my chapeau in graceful acknowledgement of his valued and timely corrections, and I have no doubt my many friends who have drawn on me for a supply of—of—well, of May Queen will also cheerfully accept this ultimatum that has gone forth from Mr. Thorpe, and in all cases where Frederick Johnson was formerly used as the name of this fine carnation will now and in the future use that of May Queen.

And perhaps it may not be out of place for me here to briefly state how I became victimized in this matter. It happened thus: In the fall of '87 I treated myself to a visit to the establishment of Messrs. Hallock, Son & Thorpe, at Queens, N. Y., and from there it was a matter of easy

transition to Mr. Louis Siebrecht's. Louis' carnations at the time were in prime condition and it took me just about one second to ask the name of the one in question, and it required of Louis about an equal space to answer "Fred Johnson," hence the whole trouble. My stock was received and propagated in good faith under that name. And may I ask if it is not now in order for Mr. Siebrecht to explain how things became so badly mixed with him?

Mr. Thorpe's reference to Rosalind reminds me that I grew that variety for two seasons. It is a perfect little beauty, a splendid grower, and about the same shade as May Queen, but no amount of skill or coaxing would induce it to flower before the holidays; it therefore had to go. I gave it the bounce to make room for its successful rival, May Queen, which seems to be exactly the opposite of Mr. Thorpe's action, as he discarded May Queen for Rosalind.

H. E. CHITTY.

Paterson, N. J., April 3.

Kansas Carnation Notes.

Having seen no notes on carnations from this state I will relate my experience with the varieties I have tried. The soil here is a very light sandy loam.

My stock secured from a wholesale grower last October comprised the following varieties: La Purite, DeGraw, Scarlet Gem, Miss Joliffe, Astoria, Snowdon, Diadem, Silver Spray, Columbia, Robt. Craig, Century, Philadelphia, Springfield, Buttercup, Fairy Princess, Wm. Swayne and J. J. Harrison.

Scarlet Gem has shown the disease from the first and has given very poor and few blooms. Century gave the earliest and very fine blooms, but only a few in the first part of the season. Buttercup and Snowdon did likewise. Every one of the other varieties has since November 1 yielded a steady supply of magnificent blooms; as I write I can count on one stalk of Robt. Craig 39 fine fully developed flowers, 13 blooms on one stalk of DeGraw, many 2 1/4 inches in diameter. Fairy Princess is a magnificent variety and worthy of a place in every stock. I have not yet tried Hinze's White; will try it next season and report.

Larned, Kan.

W. T. JACKSON.

Helleborus Niger.

The varieties of this plant, commonly termed "Christmas Roses," while very popular in Europe are but little known in America. In England "Christmas Roses" are relied upon to furnish a goodly share of cut bloom for the winter season, and it is thought by some that they would prove a profitable addition to our list of cut flowers. The fact remains however that commercial growers who have tried them in this country have so far met with limited success, the plant failing to readily adapt itself to our climate. But it may come to pass that the difficulties heretofore met may yet be overcome by some enterprising grower. If the flowers can be produced at a cost which will allow of a profit to the grower we will have increased the variety of our cut flowers by a very welcome addition.

Our illustration is of one of the beautiful white varieties, (St. Brigid) engraved from a photograph sent us by Mr. W. B. Hartland, Cork, Ireland, who states that the clump shown was bloomed under glass in a cold house the past winter. The tub was three feet in diameter.

HELLEBORUS NIGER. VARIETY ST. BRIGID

Climatic Influence on Plants.

On page 356 of the *FLORIST*, Mr. H. E. Chitty, in his interesting notes on carnations, says he was much amused at the closing paragraph in my article on the same subject.

I must admit that if Mr. Chitty can profitably grow such Buttercups and Grace Wilders as he describes, (and which is corroborated by the editor of the *FLORIST*), at Paterson, N. J., then he has a right to be amused. But I must remind Mr. Chitty, that he does not live in this "parish"; there is an intervening territory of a thousand miles separating us, and it by no means follows, that because these varieties are a success at Paterson, they must necessarily do equally well at St. Joseph. Then there is another thing which must be taken into consideration. Mr. Chitty is located in close proximity to the center of the great cut flower marts of the continent, where in flowers as in other things, the fickle goddess of fashion holds imperial sway, and just at this time she has taken a fancy to the unusual colors of Buttercup and Grace Wilder. If the supply is meagre and the price is high, so much the better, as with her votaries, price is no object, it only makes the flower the more exclusive. And now, our brother florists, who are in a position to take advantage of this freak of the wily goddess are smiling. But a question I should like to ask Mr. Chitty, is this: Does he consider these varieties equally as profitable to grow, as the leading kinds in white and red, provided their market value is the same? For it must be remembered that a large majority of the florists of the country are not so favorably located and cannot get the high prices which

these fancy varieties command in the neighborhood of the large cities.

But admitting for Buttercup all that Mr. Chitty claims for it, will he allow me to turn the tables on him. In his woful description of Grace Fardon, he closes up by saying: "The variety seems to have descended from the old La Purite, and like that good old sort, seems to have inherited its failings." Now let me assure Mr. Chitty that we have no more healthy, robust carnation than the old La Purite, our climate agrees with it and it never fails us.

Coming to Portia, my description of this variety is a counterpart of Mr. Chitty's description of Glowing Coal, and I believe it is generally admitted that Glowing Coal is a synonym of Portia.

Then again, Miss Taplin in her correspondence to the *FLORIST*, (page 232, Jan. No.) says: "Silver Spray was seen to great advantage as grown by H. E. Chitty of Paterson. Mr. Chitty, who is rather a specialist in carnations, intends to depend on this sort for his main supply of white ones next season." Of this same carnation, in my notes Feb. 1, I say, "This variety appears to combine all the qualities of a first class flower, and that for myself, for a white carnation I shall grow Silver Spray almost exclusively."

Now here are two varieties, of opposite colors, upon which we have reached the same conclusion. They can be successfully grown at Paterson, N. J., and do equally well at St. Joseph, Mo. This brings me to the subject which I started out to discuss.

Looking upon a map it will be found that Paterson is situated a little south of the 41st degree, north latitude, while St. Joseph is about the same distance south

of the 40th degree, a difference of but one degree from being on the same line of latitude, consequently their seasons correspond, yet in their climatic relations they are almost at antipodes.

At Paterson, situated as it is near the sea coast, the climate is modified by the ocean breezes, the atmosphere at most times is charged with moisture, having protracted rains in summer and snows in winter, rarely if ever suffering from severe and long continued droughts. Shielded on the north and west by mountain ranges, the force of the air currents is broken, sudden and extreme changes of temperature are avoided and the climate is equable.

On the other hand, St. Joseph is located five hundred miles away from any large body of water. As a consequence, the atmosphere is almost invariably dry, at times arid, rarely having settled rains in summer or snow in winter; situated in the midst of a vast, unbroken plain reaching up to the arctic regions on the one side and extending to the tropics on the other; subject to high winds and extreme changes of temperature. Gales from the southwest, with the hot winds of New Mexico and Arizona often reaching us in summer, and the piercing blasts of a polar wave sweeping down upon us in winter, with the temperature dropping thirty or forty degrees in as many minutes. In the latter part of September we have cool, showery weather, after which it turns warm, frost not appearing before the middle of October, often holding off until the first of November. In the meantime vegetation of all kinds is started into active growth, then when frost does come it is a killing one. Plants which are naturally hardy if matured, are cut

down or severely crippled by this first frost.

But turning again to carnations. We usually take advantage of a few cooler days about the middle of October to lift the plants, and just after we have got them nicely housed, it is no unusual thing for a southwest wind to spring up and with a bright sun shining blow a gale for two or three days, sending the mercury into the 90s. Perhaps Mr. Chitty would like to know how we manage in an emergency like this; well, we protect the plants the best we can and grow such varieties as we feel assured are adapted to the climate and can withstand these sudden and extreme changes.

Perhaps from no other cause is there so much disappointment and dissatisfaction created in this section of the country, as in finding trees, shrubs and flowers, catalogued by eastern firms with glowing descriptions and ending up as being perfectly hardy. These descriptions are no doubt given in good faith and the trees or plants may be hardy in the locality from which they are disseminated, but many of them are worthless for this section. Only a few days ago I had a letter from central Kansas written by one of my customers, asking my opinion as to certain everblooming climbing roses, stating that he had seen them described in an eastern catalogue as being hardy. In my answer I had to say that I had tried them and found them unsuited to our climate.

Now the idea I propose advancing (and it is only a theory, without data, upon which to base positive conclusions) is this: Taking a plant, or class of plants, which from practical experience it is found can be successfully and profitably grown at any two remote points, then this plant, or class, can be relied upon with safety in any locality corresponding to a line between these two points. But if on the other hand there is undoubted evidence that while they are a success at one of these points and at the same time they are a failure at the other, then their value between the two specified points can only be determined by a practical test.

Taking the above expressed view of the subject, the advantages to be derived (through the medium of the FLORIST) by an interchange of personal experience in the cultivation of different plants, will be seen at a glance by all who take an interest in the subject.

This information coming from every section of the country and concentrated in the organ devoted to the interests of the profession would become a mine of knowledge to the thinking florist, enabling him to form a correct opinion as to the value of plants for his immediate locality and placing a check upon the dissemination of varieties of doubtful character; putting the grower in a position to choose such sorts as he has the assurance will be adapted to the climate of the locality in which he resides.

St. Joseph, Mo. D. M. REICHARD.

Long Island Notes.

BY WM. FALCONER.

NARCISSUS THAT HAVE BEEN FORCED.—Apropos of my note on forcing bulbs, page 357, I may say that John Thorpe does not throw away his narcissus bulbs after he has cut the flowers, but keeps them growing as long as he can spare room for them then removes them to a cold frame to ripen their bulbs, and afterwards plants them out to remain there

for a couple of years before being lifted again for forcing.

DEUTZIAS IN WINTER.—We had a row of big bushes of *Deutzia gracilis* that I wanted out of the way last fall, so I lifted them with good roots, laid them in a patch all close together and packed around and among them with tree leaves. About New Years I began bringing a few a week into a cool greenhouse (45°-50° at night) and stuck them up close together on a side bench, nailed a board close up in front of them and put a little soil around their roots. They came along very nicely and bore profusely and excellent flowers. The early winter exposure, uncramped roots and the cool greenhouse treatment suited them exactly and we had none of the blind racemes common on early forced potted plants.

AMARYLLISES.—I cannot understand why florists don't grow more of these than they do. I have them all winter long and now in quantity. There is very little trouble with them. When I bring them in in the fall I lay them on their sides dry and keep them dry some weeks before I want them to bloom, then take those that show most signs of growth or flower buds, and set them up on the benches to the light. They soon grow and are sure to bloom. The carnation house suits mature bulbs exactly. My young hybrid seedlings in a corner in the propagating house are growing like leeks; they get no rest till big enough to bloom.

PRUNUS TOMENTOSA is a shrub from northern China and Japan and new to our gardens. It will be in bloom in a few days; so be sure to look out for it. If any of you florists who have a passion for surprising the people with novelties in the way of forced shrubs in bloom in winter know of anything more profuse and beautiful than is this *Prunus* when it is in flower, please tell us what it is. It comes into bloom just before the leaves appear, and is smothered in flowers from its base to the end of its topmost twig. The flowers are white tinged with pink, cherry-like, and set closely to the branches as is the case with "flowering almonds." But unlike the "almonds" it is a capital grower, and judging from the behavior of our plants, it shows no susceptibility to blight or borer.

LILIUMS FROM SEED.—On December 15, 1887, I sowed a large quantity of seed of *Lilium auratum* and *L. superbum* in 3-inch deep flats (boxes) filled with sandy soil and chopped sphagnum moss, and laid a layer of chopped moss over all. The boxes were wintered in cold frames and summered in a cool somewhat shady place out of doors. Last fall the boxes were again returned to the cold frame and they froze solid as they also did the previous winter. Last summer many of the seeds had burst in germinating, but only a few grew enough to make leaves, just now (April 3), however, the boxes are a sward of young seedlings with leaves an inch long. This is tedious work, but it pays. There is very little trouble attached to it, even the cold frame isn't necessary. The boxes may be left out doors summer and winter, but slightly protected in winter to keep the frost from heaving the dirt out of them. Sown immediately they are ripe and left outside to soak and freeze over winter, a large proportion of the seeds will germinate the following spring. Some kinds of liliiums, as *tenuifolium*, *callosum* and *pulchellum* germinate in nine to twenty days after being sown; others take one or more months. But home raised seedling

lilies are always considered preferable to imported bulbs, and especially is this the case with *L. auratum*.

CHOPPED MOSS.—I have great faith in this. Take the fresh sphagnum moss and with a sharp hatchet chop it up fine, and we have an excellent material for mixing with the soil in which to sow the lily, clematis, hellebore, aconite and other slow seeds, also for mulching over seed boxes. Did we use the unchopped moss the seedlings would root into it and grow up through it, and in separating them we would be apt to tear their roots; but in the case of chopped moss they are separated without any difficulty.

The "New" Moon Flower.

Let me quote from a letter recently received from a gentleman in Florida, and which I herewith enclose to the editor: "*Ipomœa Bona-nox* (the common "Moon Flower" of our florists) is a native of this state (Florida), being particularly plentiful in the hammocks along the St. Johns river and around some of the large lakes. Four years ago last December I saw it in bloom along the St. Johns, and tall bushes just curtained with it around the great lake Apopka. * * Now what is this white-seeded moon flower? That it is something distinct from the ordinary *I. Bona-nox* I know. * * It is a most rank grower, leaves and flowers monstrous and seeds white. *I. Bona-nox* has black or very dark brown seeds every time and smaller leaves and flowers. A correspondent in Louisiana grows this white seeded sort and she says cuttings of it *will not rot*. * * Have you any idea what it is? At present I have but five seeds of this sort, but if I can procure more I shall send you some to try." He sent me some seeds. They are white or yellowish white, and every one has germinated. W. F.

Nomenclature.

THE CHINESE YAM, or "Cinnamon Vine," page 356.—As an agricultural product Chinese Yam is all right, but such a name would never popularize the plant as an ornamental vine, every general plant merchant knows this. Now, this plant (*Dioscorea Batatas*) is a handsome ornamental vine, beautiful in foliage and attractive in bloom, and when it is in blossom there is no other plant in our gardens as cinnamon-scented as it is. The name "Cinnamon Vine" as applied to this plant is not new at all. I think it is about a dozen years ago that my good old friend Dr. George Thurbur protested against using it, and I thought then, and still think, without just cause. And as the name "Cinnamon Vine" referring to *Dioscorea Batatas* has been in general use for at least a dozen years, and is so descriptive of the plant in its ornamental sense, I know of no good reason why we should try to suppress it. We must not be so arbitrary as to endeavor to restrict our plants to one common name and that one derogatory to our interest. To avoid confusion is a laudable excuse, but in this case extenuation outweighs the confusion. As regards the price of the tubers, at \$1.50 a bushel no American could grow it and live. The tubers penetrate into the earth, 3 to 5 feet deep. Digging Chinese Yams is tough farming. I have grown them and dug them.

THE "VEGETABLE PEACH," page 356.—I have not grown it, but from seeds just received from Iowa I can see that it is a cucurbitaceous plant. There is no

attempt made by the seed firm to deceive. On the seed packet is printed "Vine similar to mush melon." Then they describe its cultivation and use. And they elsewhere state that they do not know what is the botanical name of the plant.

MRS. THOMSON'S MOONFLOWERS, page 361, reminds me. While it may seem all right to kick against the name of "Cinnamon Vine," a name that has been in common use for a dozen years or more, what would the people say to any one who would attempt to kick against the name "Moon Flower" as applied to the white night-blooming ipomæas? That "the fellow is crazy," I believe. Now the fact of the matter is "Moon Flower" is the old common name of the pernicious, though beautiful, white weed of our hay fields, and the first intimation I can find of it as applied to the ipomæas is by Peter Henderson. "Moon creeper" is the old name for *I. Bona-nox*. I merely mention this to show that the common names for species of plants are decided by the will of the people and not by the florist or botanist; the florist may suggest, but it takes the people to decide; if they don't like the name they never will take to the plant no matter how good it is. WM. FALCONER.

The Rainbow Plant.

"Observer," page 384, mentions that this name has already been pre-empted by *Alternanthera p. major*. Will he please tell us when and by whom this name was first given to the *alternanthera* and where recorded? I ask this for information's sake and because I keep a record of such things so far as my limited opportunities of observation extend. W. F.

The Correct Cut.

In answer to Mr. Hippard's enquiry as to which is the correct cut of Fuchsia Mrs. E. G. Hill, I would say that the one he used is an exact reproduction from a negative of that variety sent to me by Messrs. W. P. Simmons & Co., Geneva, O. I send you a photo by this mail and print of cut enclosed which please compare. A. BLANC.

Philadelphia.

[The print of cut was identical with that which appeared in the advs. of the "White House" fuchsia, and the engraving is a very accurate reproduction of the photograph. Certainly further comment is unnecessary.—ED.]

Slugs and Snails.

I noticed in the last issue of the FLO- RIST, a note on using oats, for catching slugs and snails.

I have been troubled by them, and have found the best way to get rid of them to be by placing turnips cut in slices, at intervals along the edge of the benches. Proceed with a light as mentioned in the former article. They prefer this bait to any I have tried.

I think if Mr. Thorpe will try this plan he will find them much more easily caught than with oats, as they can be so readily seen on the white discs.

Ridgewood, N. J. H. E. FORBES.

Not That Kind of an Orchid.

A well known florist from another city was recently observed endeavoring to light his cigar from an incandescent electric light at a hotel in Rochester.

Seasonable Notes.

BY JOHN THORPE.

Those plants intended for exhibition, whether for cut flowers or specimen plants, should now be well under way. Select always double the quantity required for any purpose; for instance, where three plants of any variety will be the number finally, select six.

In repotting give a shift two sizes larger, using soil open and porous with a dash of bone meal rather than green or strong manure.

In stopping plants for specimens take out the centers carefully and as soon as the plant is high enough to secure a clear stem of 2 inches, be careful in watering after stopping, as frequently plants will get too wet; they should not be allowed to suffer however from the other extreme.

If a frame can be devoted to them after this time and the plants set wide enough apart so as to allow a free circulation of air the root action will be more even than when crowded; remember that if the growth of any chrysanthemum becomes hard or ripens at this season it will be better to discard it and pick up a plant soft and thrifty, be it only half the size.

I have just selected my plants for cut flowers, for exhibition, and for pot culture. My first lot of cuttings to grow cut flowers for market will be put in between now and the 20th of the month, strong thrifty tops either from old plants grown cool or the tops of young plants which have been previously struck; from the time they are rooted until the buds are well formed they will be kept up to the quickest time. A later batch will be put in the first week in June for 6-inch pots and to grow on shallow benches.

Here is a list of varieties from which I intend to finally select six of each to grow on.

JAPANESE.

[Varieties for cut flowers for exhibition twelve of each, except where noted in 5-inch pots.]

Alicyn, Baronne de Prailly, Ceres (6), Carew Underwood (6), Comte de Germiny, Delie, Ed. Molyneux, Grandiflorum, G. F. Moseman, La Triumphant, Jeannie Delaux, La Dauphinoise, Marvel, Mrs. L. Canning, Mrs. I. C. Price, Mrs. Irving Clarke, Mrs. J. N. Gerard, Mme. C. Andiguier, Mme. B. Rendatler, Mr. H. Cannell, Robert Bottomley, Troubadour, Ralph Brocklebank, Soliel Levant.

[Varieties selected six of each from which finally to select three plants to grow in pots for exhibition.]

Amy Farze, Alicyn, Coquette de Castelle, Cullingfordii, Eclatant, Elaine, Gold, Gorgeous, Ed. Molyneux, Mrs. L. Canning, Mrs. W. Howell, Mrs. I. C. Price, Perle Precieuse, M. Boyer, Robert Bottomley, Puritan, Ornement.

CHINESE.

[Varieties selected for cut flowers and pots; those marked p will be grown in pots as well as for cut flowers.]

Alfred Salter, Bronze Queen of England, Bronze Jardin des Plantes p, Empress of India, Jardin des Plantes p, John Salter, Lord Derby p, Lord Wolsley,

Jeannie d'Arc p, John Salter p, Mrs. Heale p, Mrs. Weston p, Mrs. N. Davis p, Prince Alfred, Nil Desperandum, Princess Teck, Venus p, White Venus p. Pearl River, N. Y.

SEEDLING CHRYSANTHEMUM.—Mr. John McGowan, Orange, N. J., sends us a specimen bloom of one of his seedling chrysanthemums. It is cream white with pale yellow center; measures 3½ inches in diameter and the florets are quilled. It is certainly a very pretty flower.

A Square Issue.

I was sorry to see in an article which appeared under above heading, a few remarks which appeared to me to reflect somewhat on the general intelligence and fairmindedness of the florists assembled at the New York convention. In discussion a member stated that the sun's rays generated heat where they struck the surface of the earth. This your correspondent pronounces a new and startling discovery, and further that the announcement of this brilliant discovery was received with applause (derisive implied).

Now common observation (unassisted by the more careful investigation and comparison of the scientist) would naturally lead to this conclusion. The sun's rays coming to us through 30 or 40 miles of air below zero, passing through the glass roof of our greenhouse, striking some opaque objects, such as boards, become warmed, impart heat to the air by contact with the surface so warmed and the air. The same thing takes place of course outside, but if the surface of the earth is below zero it will necessarily be slow, first in warming the surface of the earth and then in warming so large a volume of air. I do not claim that the sun's rays have no effect in warming the air in their passage through it, but that the amount of heat imparted is in proportion to the amount of obstruction met in the shape of particles of dust, watery vapor, etc.

The writer in the FLO- RIST makes the further claim that heat radiated from pipes downward strikes the upper sides of leaves in a truly natural manner as the heat from the sun does. Is this true? It is the commonly received opinion of men that the leaves of plants after sunset become colder than the air and on clear nights sufficiently so to condense moisture in the shape of dew, checking or stopping the evaporation from the leaf and resting certain actions of the plants. I think his proposition may be fairly stated in the following words: Sunlight is accompanied by heat, as this is natural through the day, consequently it is natural that I should place my pipes so that the upper sides of the leaves of plants shall receive radiant heat during the night; or perhaps he thinks the neglect of nature to furnish such radiant heat to the leaves of plants through the night only a proof of her stingy step-mother character.

Milwaukee. FRANK WHITNALL.

The Standard Pot.

Potters who have decided to manufacture the standard pot may secure sample pots of the style adopted by the Society of American Florists, by addressing Mr. Robert Craig, 49th and Market streets, Philadelphia, who is chairman of the committee. Such a set should be secured for models before starting to manufacture.

Steam Heating.

Will some florist who is using steam please state how many feet of $1\frac{1}{2}$ or $1\frac{1}{4}$ inch pipe is necessary for each 100 cubic feet of air space to maintain a temperature of 60° with the thermometer 20° below zero outside? ENQUIRER.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advts. not admitted under this head.

SITUATION WANTED—By a gardener well up in the plant business. East preferred. Address Box 100, Aurora 111.

SITUATION WANTED—By a florist of 10 years' experience. Address Box 7, care American Florist, Chicago.

SITUATION WANTED—By a thoroughly experienced florist, private or commercial; long experience. W. J. WATTER, 44 N 3rd St. Harrisburg, Pa.

SITUATION WANTED—By a good steady, sober and industrious German florist; married, no children. State wages. Address W. H. HETTEL, care Oscar Uhle, 1317 Chicago St., Omaha, Neb.

SITUATION WANTED—As gardener and florist by a young man who thoroughly understands fancy gardening and greenhouses; good reference given. Address J. S. EDGEMORTH, Sewickly, Pa.

SITUATION WANTED—A first class gardener, German, wants a private place; understands greenhouse, nursery, and all kinds of gardening. Address WM. SCHMEIKE, 217 S. Twelfth St., Philadelphia, Pa.

SITUATION WANTED—Gentleman competent in floral, seed and nursery business (theoretically as well as practically), desires to enter an active engagement. He speaks several languages. Address GARTNER-ZEITUNG, Lemont, Cook Co., Ill.

SITUATION WANTED—Having a practical knowledge of propagation, all kinds of florist stock and the business, in any department. First class rose grower and designer. Sober, capable and reliable. References. FLORIST, 117 Washington St. N. Y.

SITUATION WANTED—As head gardener to take sole charge where two or three men are kept, or single handed. Scotch, good florist, used to hot water and steam heating, fair carpenter. First class references in Toronto, disengaged April 8. Address MR. MILLER, 280 Carlton St., Toronto, Ont.

SITUATION WANTED—As gardener or florist, 15 years' experience in the best private and trade establishments in England, and 1 year in this country; a first class all-round man; age 32; single. For particulars apply to W. MATHEWS, florist, New York St., Utica, N. Y., or J. H. TROY, Wellesley Hills, Mass.

SITUATION WANTED—After April 18, by a young single man, of 4 years' experience in growing roses and propagating. Well experienced in forcing bulbs, designing, decorating, building of greenhouses, glazing and all general florist work. Best of reference from present employer and others. Address Box 26 F E C, Govanstown, Balto. Co., Md.

WANTED—25 to 50 strings of smilax per week regular, if good. J. M. GASSER, 101 Euclid Ave., Cleveland, Ohio.

WANTED—Young man, experienced florist, sober and competent to take charge of large commercial place. MEMPHIS FLORAL CO., Memphis, Tenn.

WANTED—A man of good, steady habits, to take charge of small greenhouse, make up bouquets, etc. State wages. Address LEWIS R. FOX, 117 E. Fulton St., Gloversville, N. Y.

FOR SALE—About 2,000 feet 4-inch greenhouse pipe with valves and fittings. Address PAUL F. LAUG, Turner Park, Ill.

FOR SALE—The E. Y. Teas Dunreith Nurseries. Price \$3000, will invoice \$3000. This is a great bargain. Address A. T. HUDELSON, Dunreith, Ind.

TO EXCHANGE—Verbenas, fine plants grown in frames from 2-inch pots, \$2.00 per 100. Will exchange for Tea roses, carnations, or coleus. Address ROSCOE SAUNDERS, Bradford, Ill.

FOR SALE—A 3-horse power boiler and fittings and No. 0 Deane steam pump, also a cedar tank for \$75.00 cash. Have no further use for them. Address LINCOLN HEIGHTS NURSERY, Newtown, Bucks Co., Pa.

FOR SALE—A small good established greenhouse business in Nebraska; three houses and cottage all in good condition. This is a good chance for a young man with small capital. Address H & T, care American Florist.

FOR SALE—A good established floral store in Chicago, West Side. Will be sold very cheap if taken at once. Owner has other business and can't attend to both. Address H. C. MUDDER, 729 West Madison St., Chicago.

FOR SALE—Greenhouse in town of 50,000 inhabitants, in central Illinois. Greenhouse in elegant shape for spring sale. Will sell with property, or alone, rent dwelling house and grounds. Address H B, care American Florist, Chicago.

FOR SALE—To florists—Two greenhouses in perfect condition, containing choice roses, grapevines, camellias, and many other plants, in Arlington, five minutes walk from steam and horse cars. The lot containing about 9,000 feet. Has also a double house; each house containing six rooms. More land adjoining can be bought if desired. Terms easy. KIDDER PEAHODY & CO., 113 Devonshire Street, Boston, Mass.

Pansies that are Pansies

BUGNOT'S AND CASSIER'S EXCELSIOR STRAIN.

At a trial of all the leading strains obtained direct from the introducers, and planted side by side, by Mr. Denys Zirngiebel, in his large trial house (150 x 15 ft.), which he had erected expressly for Pansies, these were PRE-EMINENTLY SUPERIOR to anything in the house; the colors were SIMPLY ASTONISHING, BEING ALL THAT ARE KNOWN TO THE SPECIES, AMONG WHICH A WELL-DEFINED, CLEAR RED MARKING WAS STRIKINGLY PROMINENT; for COLOR, SIZE AND SUBSTANCE they were FAR AHEAD OF ANYTHING EVER SEEN IN THIS COUNTRY. Cut blooms were sent to LEADING HORTICULTURAL PUBLICATIONS and to CONNOISSEURS of this flower, and their PRAISES ARE LEGION FIRST PRIZE WAS A CERTAINITY AT ALL EXHIBITIONS WHERE SHOWN.

We contracted with Mr. Zirngiebel to save the seed of these strains, and we have the entire stock.

For anyone who wants a Pansy to compete against all comers, this is the one.

In packets of 100 seeds each, 50 cts., 1000 seeds, \$4.00.

SCHLEGEL & FOTTLER, BOSTON MASS.

ROSES.

A splendid collection of imported Hybrids, worked low on Manetti Stock, well established in pots.

Price, \$3.10 per dozen; \$30.00 per 100.

ROSE, CLIMBING NIPHETOS.

CLIMBING

NIPHETOS

ROSE.

The Most Valuable Introduction Since Marechal Niel. A small plant in a pot exhibited before the Royal Horticultural Society in London bore forty-eight splendid blooms, and was awarded a First Class Certificate. It Flowers Very Freely, differing from those of old Niphotos (from which it is a sport) only in that they are of a purer white, not showing the pink tinge, and that they seem more delicately scented. SHOOTS HAVE RUN UPWARDS OF TWENTY FEET IN ONE SEASON. This variety blooms only from the lateral shoots while the main stem grows on with a most decidedly climbing habit. A valuable help to those who supply CUT FLOWERS FOR MARKET. To be distributed in the United States in May, 1889, by JAMES VICK, SEEDSMAN. Send for particulars to KEYNES, WILLIAMS & CO., Salisbury, England, or

JAMES VICK, SEEDSMAN, ROCHESTER, N. Y.

FOR SALE CHEAP.

55 Miles from Chicago.

New Pure White Tea Rose The "QUEEN."

This splendid new Rose originated with us two years ago, and having proved valuable, is now placed on sale. It is

A PURE WHITE SPORT FROM SOUVENIR D'UN AMI.

A vigorous, healthy grower and continuous bloomer, producing a great abundance of Buds and Flowers all through the season. Flowers are PURE WHITE, showing no trace of Pink, makes good finely formed Buds and is moderately full. Petals are thick and of good substance, opens well, is a good keeper and very sweet. We believe it will prove especially VALUABLE FOR EARLY WINTER FORCING AS WELL AS FOR OPEN GROUND PLANTING, and recommend it for extended trial with the belief that it will be found a valuable acquisition to our list of Pure White Tea Roses.

PRICE: Strong well matured plants from 2½-inch pots, \$3.50 per doz.; \$25.00 per hundred. Two year plants from 5-inch pots, \$9.00 per dozen.

VERY CHOICE YOUNG STOCK

— FROM —

DUNDEE LAKE ROSERIES.

Having finally decided not to build any new rose houses this year, I am now able to offer the 10,000 very choice young plants I had prepared for the contemplated new houses. Every cutting for this stock was made under the conviction that the resulting plant would be flowered on my own benches. Only carefully selected wood from healthy, vigorous plants has been used for cuttings.

To parties wanting any of the following kinds, I shall be pleased to quote prices, on either large or small orders:

<i>American Beauty,</i>	<i>La France,</i>	<i>Madame de Watteville,</i>
<i>Catherine Mermet,</i>	<i>Bon Silene,</i>	<i>Souvenir d'un Ami,</i>
<i>The Bride,</i>	<i>Perle des Jardins,</i>	<i>Papa Gontier.</i>

My place is near stations on THREE Railroads, viz: New York, Lake Erie & Western; Delaware, Lackawanna & Western, and New York, Susquehanna & Western, to either of which stock will be delivered, free on board cars. I shall be glad to have intending purchasers inspect my stock before placing orders. My nearest station is Clifton, on N. Y., L. E. & W. R. R.

S. C. NASH,

Clifton, Passaic Co., N. J.

NEW PEDIGREE ROSES FOR 1889.

CLEOPATRA, Tea; first class certificate Royal Horticultural Society.

Grafted plants ready in May. Descriptive Price List will be mailed to all correspondents free on application.

H. BENNETT, Pedigree Rose Nursery,
SHEPPERTON, MIDDLESEX, ENGLAND.

ROSES. ROSES.

We have a very fine stock of Roses in four and five inch pots suitable for forcing, consisting of BON SILENE, BRIDE, LA FRANCE, MALMAISON, MERMET, NIPHETOS, PAPA GONTIER, PERLES, SAFRANO, SUNSET, and many other choice varieties. PRICE, \$10.00 to \$12.00 per hundred.

ELLWANGER & BARRY,
MOUNT HOPE NURSERIES. ROCHESTER, N. Y.

News Notes.

ST. LOUIS.—On February 1 Mr. Julius E. Jaeger, a florist at 1813 Sidney street, was found dead in his bed.

DENVER, COLO.—Emil Glauber has just completed two new houses 18 x 100 feet each connected with a new packing room 18 x 36.

ALBANY, N. Y.—The firm of L. Menand & Sons was dissolved April 1. Louis Menand will continue the business at the same locations.

MILWAUKEE.—Jos. Money, the florists' wire worker, has sold out to the Reliance Wire Work Co., with whom he will remain as an employe. Miss A. L. Hendee has opened a floral store at 138 Mason St.

RICHMOND, VA.—The Richmond Florist Club has issued a schedule of premiums for its first annual chrysanthemum and plant show to be held next November. Jno. R. Hooper is president and J. H. Harvey secretary of the club.

MILWAUKEE.—Wm. Gregory, of Humboldt avenue, has sold out to Benjamin Gregory. The first named gentleman will remove to Ludington, Mich. C. Baumgartner, one of our pioneer florists is quite ill.

WORCESTER, MASS.—The County Horticultural Society gives its next exhibition on the 18th inst., which will be followed by weekly shows throughout the summer, closing with the annual chrysanthemum show November 13 14.

LARNED, KANS.—Cut flower trade in this section has been about the same—probably a little better than last year with the demand nearly altogether for loose flowers. The winter has been unusually mild; only once did the mercury settle down to zero. Stock is all in fine condition and look for spring business to open early.

PITTSBURG.—The Western Pennsylvania Botanical Society has monthly meetings, its object being to create a more widespread study of plants and particularly of those indigenous to western Pennsylvania. The society expects soon to publish an accurate flora of Allegheny county and subsequently one of the entire western part of the state. Dr. Wm. R. Hamilton is president and Miss Willa Z. Mathews corresponding secretary.

WASHINGTON.—At a meeting of the florists of the city and vicinity held in the lecture room of the Botanical Garden on the 4th inst., the "Washington Florists' Club" was organized and officers for the ensuing year elected as follows: J. R. Freeman, president; R. Bowdler, vice-president; W. S. Clark, recording secretary; C. F. Hale, treasurer; G. W. Oliver, corresponding secretary; E. Cadmus, A. Glorious and E. Miller, auditing committee. The club will meet on the first Thursday evening of each month.

San Francisco.

As I shall soon leave here for Portland, Oregon, I took the opportunity today to visit Golden Gate Park and the Cliff House, also the beautiful residence of Mr. Adolph Sutro.

On entering the park we find the acacias and tritomas in full bloom, and they are certainly very effective. California seems to be the home of the acacia; they are used quite extensively as shade

trees on the streets and avenues, and the only objection I see to them is that they get at times so full of black scale that they have to be cut down to prevent the scale from spreading to the other trees. It is a common thing to see trees from 25 to 30 feet high. In the park there are very many choice conifers which cannot be grown in the east, many of them being natives of Japan, and they are certainly beautiful.

In going through the conservatory I felt quite interested in the way they grow their orchids. Part of the side benches are encased with sash, and inside, the orchids (too many to mention) were in their glory, blooming to perfection. The conservatory certainly does credit to those in charge, and the park in general looks well.

After leaving the park our next trip was by the steam cars to Cliff House, a distance of five or six miles, and almost the whole distance we saw the acacias in full bloom, growing wild. We visited Sutro Heights and here we were well repaid for climbing the hill. The gardens are open to the public and I saw there more outdoor flowers in bloom than at any other place around San Francisco. Instead of grass borders they use mesembryanthemum quite extensively; (about 12 to 15 inches wide), it is kept trimmed and it answers the purpose nicely. Variegated thyme is also used for lettering and borders and does very well. The flowers in bloom were too many to mention, but they all seem to be doing their part. The evergreens here are in almost endless variety and are in fine condition.

I must not close without a word in regard to the statuary; it is certainly fine and placed amongst the shrubbery and trees and on the terraces assists greatly in increasing the effect. Mr. Adolph Sutro deserves our appreciation of his generosity. Would there were more like him. He has certainly a magnificent place and I hope he will live long to enjoy it. This place (so different from most large places in Europe) has no signs informing us that "all trespassers will be prosecuted"; on the contrary, all lovers of flowers and trees are welcomed. SIDNEY CLACK.

Boston.

The April meeting of the Gardeners' and Florists' Club was an interesting one the members being entertained and instructed by Mr. Edw. Hatch who delivered an essay on the "Auction Plant Trade." He will soon commence to give practical illustrations on the subject.

Mrs. E. S. Joyce of Medford, aged 83, and possibly the oldest active florist in the country, sustained a very severe fall March 25. Her recovery is doubtful. Mrs. Joyce has been a familiar figure about the horticultural exhibitions for a quarter of a century, and has many friends. Her two sons died in southern prisons during the war.

"You don't know, Mr. X., how bare our table looked with that one Mermet and nothing to relieve it!" Thus spoke a customer who had ordered one Mermet and some ferns for her table. The florist had forgotten to send the ferns and she had come to reprimand him for his neglect of so important an order.

Mr. Edwin Lonsdale comes out in the last number of the FLORIST with a conundrum about "beans." His curiosity is truly laudable, and if he will but take a flying trip to the "Hub" some bright Sunday morning, he will be enabled to carry back with him the information he so much desires, and he won't need any

steam engine to pull him home afterwards neither.

The delegation which attended the exhibition, from New Jersey and Pennsylvania, visited a number of the local establishments while here, and when they departed for home they were accompanied by a Boston escort which saw them safely across the border into Rhode Island. One of the latter party came home with an overcoat twice as good as the one he started out with, all of which leads us to wonder whether Rhode Island is as dry a state as it is reputed to be. By the way, who got the new necktie?

Mr. James Cartwright, an old and well-known florist died March 25, at his home in Wellesley. He was born in Burslem, Staffordshire, England. He started in the florist business at Wellesley, Mass. in 1866, and soon became well known for the good quality of the cut flowers which he brought to market, his specialties being roses, violets and gladioluses. Of the latter he had a fine collection which took many first premiums at the horticultural exhibitions. In recent years he was also a large grower of cypripediums. He served for a number of years on the flower committee of the Mass. Hort. society. He leaves four sons, all of whom are in the florist business. Mr. Cartwright was a hard working, conscientious man and well worthy of the respect which he received from his brother florists, quite a delegation of whom attended his funeral. His age was 68. W. J. S.

MISS EMILY LOUISE TAPLIN, well known to the trade through her contributions to the columns of the FLORIST was married to Mr. Edwin Royle, March 27, at Hackensack, N. J.

CLIANthus DAMPIERI.—Mr. J. Shanley foreman for J. Condon, Brooklyn, N. Y., sends us some blooms of this odd flower. He states that the plant from which they were cut has seven stems from one to two feet long and forty racemes of bloom.

ROSE REINE MARIE HENRIETTE.—Mr. E. Haentze, Fond du Lac, Wis., sends us three handsome blooms of this rose, one of them the largest we have ever seen of this variety. If it was only more uniformly productive how valuable it would be to the cut flower grower.

Washington Florists.

Listen to what Olive Logan says about florists and flowers in Washington, D. C., in the Philadelphia Times March 31st.

I fancy that the florists' trade must be prosecuted in this city under rather more favorable conditions than in most others. Elsewhere flowers are a luxury; here they are a necessity. Diplomatic life is so much more subtle than any other sort of existence, that flowers and bon bons are constantly required as supplementary to the usual vocabulary. Necessarily this must make great trade for the florists, in addition to the customary demand. Undoubtedly, also, the florists here are in a position to know all the latest news from Flora's kingdom. The government hothouses receive every thing that is beautiful as soon as known.

All who have the good fortune to know the Washington florists can heartily congratulate them on their superior advantages. L.

Wanted Bugs on Them.

Citizen (at florist's): "Have you any plants with bugs on them?" Florist: "No, indeed! I don't keep such things." Citizen (disappointedly): "I was in hopes you did. My wife never lets me smoke in the house except when there are bugs on the plants."—Burlington Free Press.

The Seed Trade.

SEED TRADE ASSOCIATION.—Geo. S. Haskell, Rockford, Ill., president; Albert M. McCullough, Cincinnati, secretary.

ST. LOUIS.—J. P. Gadd is now established at the stand known as the Lindell Flower Store under the hotel of that name.

J. J. H. GREGORY delivered an address at Boston March 23 on the cultivation of the onion, giving some very interesting facts concerning varieties, sets, fertilizers, seeders, etc.

MR. J. H. MUNSON, late with Jos. Breck & Son, of Boston, is said to have purchased an interest in the Emerson Seed Co. at Omaha and will locate there.

THE Albert Landreth Seed Co. has been incorporated at Manitowoc, Wis.

ANOTHER letter to a seedsman, we give it literally:

"I am agent for 4 seeds firms Mr Maul living (evidently Levings Bros.) goodwin and i v fost and shumway that is five and i had twenty catalogues this spring." ————— Ills.

Mailing Circulars With Canceled Stamps.

J. E. Everitt, of Everitt & Co., dealers in seeds and publishers of the *Agricultural Epitomist*, was arrested yesterday afternoon by Postoffice Inspector Stewart, on the charge of violating the postal laws. The accused was brought before Commissioner Van Buren, who heard a portion of the evidence and then continued the case until this morning at 10 o'clock. The evidence was to the effect that Mr. Everitt, among those whose mail is the heaviest at this office, has been having trouble with Postmaster Jones for several months. For several years it has been the custom of the firm to send out every winter and spring several hundred thousand catalogues advertising the seeds in which they deal. The catalogues were always arranged in size so as to be carried through the mails for 1 cent, and last year, according to Mr. Everitt's evidence, he got along very well with the postoffice officials. This year, after he had mailed about 50,000, the stamp clerk in the office claimed that they were too heavy to be carried for a cent. The edges of the pamphlets were trimmed and the postal authorities then said the weight was too much for 1 cent. But the postoffice people again objected to circulars he mailed, and leaving out an envelope he had inclosed in that of a circular, he was informed that these packages were not too heavy. But it is said that after this a large number with envelopes were again mailed, and a third time the postoffice officials complained.

Mr. Everitt says he then went to the postoffice and called the attention of the officials to the fact that the scales on which they were weighing the mail matter were not balanced, but he was not treated courteously by the employees. Seeing it was impossible to get his mail matter sent out through the Indianapolis postoffice he made arrangements with the postmaster at Lawrence and the postmistress at Brightwood to have his circulars mailed from those offices. Accordingly 21,000 circulars were delivered at the Brightwood office and 3,000 at Lawrence. The Brightwood postmistress, taken sick soon after receiving the circulars, was unable to mail them promptly. Finding that several thousand had not been mailed Mr. Everitt took them from that office and brought them back to his place of business on West Washington street.

A few days afterward the same circulars was delivered to the Indianapolis postoffice. They still bore the stamps canceled at the Brightwood office and no additional postage had been paid. Mr. Everitt was notified of the discovery, and he says he informed the authorities that the circulars had been sent to the office by mistake, and asked that they be returned to him for new stamps. The postoffice authorities refused to allow the return of the matter and directed Mr. Everitt's arrest. He says very positively that the circulars bearing the canceled stamps were delivered at the office by mistake on the part of the persons who had his mailing in charge.

Commissioner Van Buren held that the defendant had committed no offense by mailing his circulars at Brightwood or Lawrence, even though they were too heavy to be carried for 1 cent, but he desired to hear more evidence upon what Mr. Everitt claimed was a mistake in attempting to mail circulars bearing canceled stamps.—*Indianapolis Journal* March 29.

Burpee on Renaming Varieties.

We are just in receipt from our London office of a copy of the *Gardening World* of February 23d, in which we note the letter of Mr. James Muir on "How Synonyms are Multiplied." We must express to you our appreciation of your courtesy in publishing this article, and also our sense of the importance of the subject. As you will see by the marked paragraph enclosed from our Farm Annual for 1889, we are trying to curb to the best of our ability this iniquitous system of selling the same variety of

seed under several names. Mr. Muir speaks particularly of Messrs. Oakshott & Millard using the same American illustration of Charles Downing Potato which appeared in our catalogue for 1885, to advertise apparently the same potato as their "Satisfaction."

We have before us a copy of this firm's catalogue for the current year, and note on page 14 that they have appropriated our copyrighted illustration of Jaxton's Evolution Pea, which appeared in our catalogue for 1886, to advertise their "Specialite Pea."

On page 20 they have appropriated the original illustration of our Cardinal Tomato to illustrate their "First Little Beauty," while on page 18 they prominently announce "Oakshott & Millard's Mammoth Silver King Onion," claiming as their own a variety which was first named and introduced by us in 1884. While we have pirating in America, it is seldom that we meet with quite such bold piracy as in this catalogue from Reading.

Last year Mr. R. H. Vertegans also boldly transferred a number of our American illustrations of vegetables, evidently procuring seed from America and introducing them as new and distinct novelties into England.

The re-naming of novelties in vegetables and flowers in America is now taken in hand by several of our leading journals, assisted by the State Experimental Stations, and it is likely that this deceptive practice will be largely curtailed. We are glad to see that your journal is so fair and impartial as to take the same stand in England.—*W. Atlee Burpee & Co., Philadelphia, in Gardening World, March 23.*

"MUMS."

I have yet to dispose of 54 plants of MRS. ANDREW CARNEGIE, at \$2.00 each, or six for \$10.00.

Also the following sterling kinds by the HUNDRED: Grandiflorum, Boyer, Triomphante, Cullingfordii, Moonlight, Langtry, John Thorpe, Gloriosum, Christmas Eve, at \$3.00 per hundred.

40 of the Finest Varieties for all purposes, including the best of New Ones of last year, at \$8.00 per hundred.

REMEMBER, these are what I say, the finest varieties.

STOCK IN THE FINEST POSSIBLE CONDITION.

JOHN SCHAFFER,
BALLSTON SPA, N. Y.

NOVELTIES IN FLOWER SEEDS

FOR 1889.

Offered by **John Gardiner & Co.,** 21 N. 13th St., PHILADELPHIA, PA.

SHIRLEY POPPIES

The most chaste and beautiful of all single Poppies. The colors are very wavy and graceful in the sun, and run through all shades of bluish and white to rose and crimson. Surpassingly lovely. Packet 25 cents. See *Gardener's Chronicle* for March 9th, '89, for full history of this.

CUP AND SAUCER CANTERBURY BELL

An odd and remarkable strain of this favorite old-fashioned flower, comprising great variety in color and much diversity in form and habit. Packet 15 cents.

AUBRETIA LEICHTLEINI

A very fine variety with flowers of a brilliant carmine-rose; much larger and finer than any other *Aubretia*, and a welcome addition to our list of dwarf, early, spring-flowering perennials for rock work, etc. Pkt. 25c.

KALANCHOE CARNEA

This promises to be one of the most valuable additions to our list of winter-flowering plants. Flowers in mid-winter, like the *Frezia*, and bears large umbels of delightfully fragrant pink flowers. Being long-stemmed and free flowering, it will make a good subject for cutting, etc. Packet 25 cents.

NEW MINIATURE SUNFLOWER

This very charming sunflower was in great demand last season for cut flowers. The blooms are small, single, bright golden yellow, with dark centre. The plant covers, literally, itself with flowers from July to October. Perfection for cutting. Packet 10 cents.

SEND FOR OUR LIST OF NOVELTIES AND SPECIALTIES FOR THE TRADE.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

FORCING BULBS

FOR

Fall Delivery.

NARCISSUS

AND OTHER

POPULAR BULBS

FOR SPRING FORCING.

Special Prices upon Application.

Narcissus Albicans, large creamy white trumpets; one of the best.

Narcissus Bicolor Empress, the Queen of the bicolors, immense trumpets, a great favorite.

Narcissus Bicolor Grandis, similar in color to *Horsfieldi*; but with stouter flowers and much later.

Narcissus Bicolor Horsfieldi, a great beauty and fine for cutting.

Narcissus Bulbocodium, "Yellow Hoop Petticoat," fine strong bulbs for forcing.

Narcissus Bulbocodium Citrinus, pale sulphur flowers, and very early.

Narcissus Emperor, the largest; immense stout flowers of a rich yellow.

Narcissus Golden Spur, immense deep golden yellow flowers, and wonderfully early.

Narcissus Henry Irving, rich yellow, large bold trumpets.

Narcissus Incomparabilis Cynosure, a beautiful single incomparabilis for cutting, yellow cup, divisions creamy white.

Narcissus Incomparabilis Stella, large single white variety, very early, fine for cutting.

Narcissus Major, true, one of the best forcing sorts, large yellow trumpets, similar to maximum.

Narcissus Nobilis, a first class variety for florists, free and early.

Narcissus Obvallaris, the true Tenby daffodil, one of the best varieties, forcing deep rich yellow flowers of great substance.

Narcissus Odorus Campenelle, the well known Campenelle Jonquil, very strong bulbs.

Narcissus Orange Phoenix, large double white flowers with orange center, good for cutting.

Narcissus Pallidus Præcox, the earliest of all, forces very freely, single, sulphur colored trumpets.

Narcissus Rugilobus, true, large yellow trumpet, very free and very early.

Narcissus Scoticus, the Scotch Garland daffodil, a beautiful variety both for borders and for forcing.

Narcissus Von Sion, true, the double deep yellow daffodil.

Freesia Refracta Alba, large bulbs for forcing.

Freesia Leichtlini, a nice contrast to preceding and forces well.

Gladiolus The Bride, flower pure white, fine for forcing.

Helleborus or *Xmas Roses* in great variety, and extra fine flowering clumps for forcing, can be supplied early in fall.

And many other first class sorts. List of varieties and price I should be happy to furnish upon application.

Freight Rates Reduced.

On January 10 the western classification was changed so that flower pots were classed with crockery as second class freight, thus nearly doubling the freight on them west of Chicago and St. Louis. This classification has now been amended to take effect April 1, placing flower pots with earthen ware back in 4th class freight, so that they now are charged only the same rate of freight as in 1888.

I think this will be very pleasant news to all florists in the territory west of Chicago. East of Chicago the rate is 4th class, and in the south the rates are mostly 5th class on flower pots.

Syracuse, N. Y. J. N. PERKINS.

ROSES FOR FLORISTS.

WEST GROVE, PA.

J. G. BURROW, FISHKILL, N. Y.

American Exhibitions.

In his report of the recent orchid show at New York the New York correspondent of the *English Gardeners' Chronicle* says: "Being the first horticultural show that I had ever witnessed in the United States of America, I was somewhat desirous of observing in what points it would vary from one in the Old Country. It was astonishing to note so great a difference in the methods and manner of exhibiting the plants, there being none of that stiff formality so characteristic of the English flower show; but all was grace and elegance, even to the tables, which were not overcrowded, or in straight lines, showing off the exhibits to advantage."

In the same issue of the *Chronicle* appears as a supplement an ink photo of a view in the grounds of H. H. Munnewell, Wellesley, Mass.

OWEN'S IMPERIAL BEGONIAS

NEW AND DISTINCT STRAIN.

The result of many years' careful selection and hybridizing. Habit dwarf, erect and vigorous; blooms of great size and substance. Awarded many prizes and certificates.

10 First Prizes by One Exhibitor, 1888.

TESTIMONIALS.

Cambridge, July, 1888.—"I am pleased with the Begonias you sent me. The habit of the plants is very dwarf, flower stems erect, the flowers looking one in the face as if not ashamed to be seen."

HENRY RIDGEWELL.

MR. E. MOLYNEX Swanmore Gardens, writes: "I consider the Tuberous Begonias raised from your seeds are splendid in habit of growth. The blooms are large of perfect form, and borne on stout, erect stalks, just the thing for either pot culture or bedding."

MR. J. P. KENDAL, Templeton Gardens, Rockhampton, writes: "The Tuberous Begonia seed I had from you last season produced the finest flowers I ever saw, and of every color and shade imaginable. Seed sown in March and August produced enormous flowers of great substance; they were the admiration of all who saw them."

Price of seed in Trade Packets, 10s. 6d. and 21s. each; Tubers, 31s. 6d. per 100; 42s. per 100; 63s. per 100. R. OWEN, F. N. C. S., Floral Nursery, Maidenhead, England.

FIRST PRIZE FOR NEW ROSE, PENNSYLVANIA HORTICULTURAL SOCIETY, APRIL 2, 3 AND 4, 1889.

We can still Ship you Plants in May and June.

BROTHER FLORISTS:

You have wanted for years a continuous blooming red rose, for culture under glass.

First, Came ANDRE SCHWARTZ, the red SAFRANO, which has proved utterly unfitted to our climate.

Second, WILLIAM FRANCIS BENNETT, the superb red bud, which at times is unexcelled. Its faults, however, we all know by this time. No one can prevent its habit of resting or its tendency to black spot. Very few can grow it with sufficient stem. Its fugitive color will always be a great drawback, and its serious lack of lasting qualities, cannot be denied successfully.

Third, Came AMERICAN BEAUTY (synonym, MADAME FERDINAND JAMAIN). That majestic flower, superb in color, in perfume, in growth, but not so free flowering, and occasionally producing defective blooms. We could not get along without it. It has had no equal among the hybrid teas for large work.

Fourth, Came PAPA GONTIER, with good shape, good color, and good foliage, but liable to crop, and with a tendency to drop its leaves, caused probably by its Bourbon parentage. This rose is an excellent shipper and keeper, but alas it has no perfume.

Fifth, Comes our WOOTTON, a genuine American Seedling, with the following good qualities:

First, Color, velvety red, equal to Jacqueminot.

Second, Perfume which cannot be excelled.

Third, Continuous flowering qualities. It has no resting period—blooms and new growth existing at the same time.

Fourth, The most prolific bloomer in existence, every shoot containing a flower bud.

Fifth, Habit, exceedingly vigorous and in foliage quite equal to the American Beauty.

Sixth, It never makes imperfect buds and dark weather but deepens the color, giving it a richer shade of crimson.

Seventh, It retains its color for a long period; flowers having been kept by us in good condition for two weeks after being cut.

Eighth, It is a full double rose, and is good in bud, half open, or fully expanded. Full open flowers frequently are six inches in diameter.

Ninth, The color is even more intense and brilliant at night than in the day.

Tenth, It is free from black spot, the great enemy of the Bennett.

Eleventh, Its shipping qualities are perfect.

Below we give you the daily record of the number of perfect flowers cut from five hundred bushes, during the month of December, 1888:

Dec. 1	148
Dec. 2	132
Dec. 3	52
Dec. 4	82
Dec. 5	153
Dec. 6	105
Dec. 7	91

Dec. 26	96
Dec. 27	81
Dec. 28	40
Dec. 29	46
Dec. 30	33
Dec. 31	63

Total 2731

Or on an average of 88 per day. A large portion of these blooms brought 40c. each at wholesale.

Remember, No Imperfect Flowers like the American Beauty produces.

✽ 60,000 YOUNG PLANTS FOR THE TRADE AT REASONABLE PRICES, AS FOLLOWS: ✽

\$180 per thousand.

\$100 per five hundred.

\$25 per hundred.

50 cents each in quantity less than 100.

From 2½-inch Rose pots. Orders delivered in strict rotation, by Mail or Express.

For Sale by

C. STRAUSS & CO. P. O. Box 422 WASHINGTON, D. C.

Also for Sale by

JOHN COOK, 318 N. CHARLES STREET, BALTIMORE, MD.

MESSRS. STRAUSS & CO. Beg to add, that they have a Large Stock of Young Plants of the following Roses at very reasonable rates:

AMERICAN BEAUTY,
PAPA GONTIER,

ANNIE COOK,
MADAME CUSIN.

CATHERINE MERMET,
THE BRIDE.

THE GEM,
LA FRANCE.

PURITAN,
PERLE.

Their PURITAN and LA FRANCE have been pronounced the finest in the United States. A complete renewal of stock every two years seems to be essential to continued success in rose culture under glass.

Would Have the Horseshoe.

"We have many strange customers," declared an uptown florist the other day. "Our greatest difficulty is with people who want wedding or funeral designs, and don't know what they really do want. They will select the most inappropriate pieces, and for our own sake we frequently have to interfere. Not long ago an Irish woman came here and wanted a funeral piece. I showed her a lot of designs, but her eye caught a 'horse shoe' frame, and she thought she would like that. Of course that wouldn't do for a funeral, so I tried to scare her off by a big price. She didn't scare worth a cent, though she looked poor enough. Eventually I had to explain, so I said: 'Madam, this horse-shoe is hardly appropriate for a funeral. It means good luck, you know, and, of course, you can't wish the dead good luck. Some persons might be heartless enough to suppose that you wished the family of the dead good luck on account of the death.'

"'Niver ye moind,' she answered, 'O'll take it. It's for me brother Terry, had 'cess to him, an' a bad one he was in his loife. He'll need plenty o' good luck if he wants to git out o' Purgatory afore Rizzurrection Day,' and she took it."—*New York Tribune.*

A New Inscription.

A Bowery florist received an order from a fire engine company for a floral tribute, "something extra," to be sent to the funeral of a deceased member. He decided that the usual mottoes would not be "something extra," and after considerable reflection prepared a large pillow of white pinks, on which appeared the letters "S. Y. L." in violets. At the funeral he asked one of the committee how he liked the floral tribute. "The flowers look all right," was the response, "but what in thunder does 'S. Y. L.' stand for?" "Why, cant you get on to that?" inquired the florist. "None of us have yet been able to." "You said you wanted something extra, and I thought I would not use the old expressions of 'Gone Before,' or 'Our Brother,' but something new." "Well, but what does this yer 'S. Y. L.' stand for?" "Why, for 'See You Later.'"—*New York Star.*

ADVERTISERS.—The latest date at which advertisements should reach this office to ensure insertion in the following issue, is noted in each issue at top of left hand column on the page with cut flower quotations. Please consult it when sending advs. and mail accordingly.

THE EASTER TRADE.—All reports received indicate that the Easter trade for 1889 has been very satisfactory, some reporting sales larger than ever before and none complaining. There was a good supply of nearly all flowers which were disposed of at paying prices. Loose flowers still constitute the bulk of the sales, and the demand for good blooming plants is still on the increase.

New York Notes and Comments.

Easter stuff this season seems, if anything, of a higher average grade than last year; it is usually extremely good. One of the most noteworthy lots to be seen anywhere was at Mr. James Deau's, Bay Ridge. Mr. Deau is well known as a grower of Easter stuff—this is his specialty; consequently the stuff is always just ready on time. This year the most remarkable feature was the display of *Hydrangea Otaksa*. A house 150 x 22 feet was filled entirely with these plants, one mass of bloom. Most of the plants were large, from three to five feet across, and the trusses of bloom were very fine, many being 18 inches in diameter. The mass filling this house consisted of but 230 plants, but being so large they took up a good deal of space. There is positively no doubt that Mr. Dean's *hydrangeas* are the finest batch ever seen in the trade; this is frankly admitted by all who have seen them. The flowers were remarkably fine in size and color, apart from the magnitude of the trusses. It is a pity that no illustration could show the full glory of that house; the writer finds it impossible to describe the beauty of these plants, without using up all the adjectives in Webster's unabridged in the attempt to do the subject justice. If there is anything finer to be seen in the way of *hydrangeas* we should like to hear of it. More of the *Otaksa* is to be seen generally than Thomas Hogg, though one would imagine that the white would be even more acceptable now than pink or blue. However, the colors of *Otaksa* are usually delicate, and its flowers are always large.

Mr. Dean's *azaleas* are of course good, and he had a very large Easter batch, chiefly standard old sorts, which are often of greater use than some of the newer fancy varieties. Some tremendous plants of the old *Phœnicia*, generally used as a stock for grafting, were completely covered with their purplish magenta blooms—very handsome. This is a variety which can only be combined with white to be effective, but it is beautiful when rightly used, though now rather out of favor. Good plants of *Punctulata* were interesting for their peculiarities in sporting; clear solid red bloom occupying one part of the plant, while the rest would show every variation of red and white. The finest white *azalea* to be seen was certainly *Reine des Blanches*; the flowers are not only large, but borne in such a way that each bloom is fully displayed. Shapely and prolific, essentially a good trade *azalea*. Bernard Andreas, both red and white, still holds good rank. One of the best striped varieties, red and white, was *Baronne de Vriere*. Madame de Grieve was an admirable pink and white, good color and shapely flowers.

Lilies were plentiful of course; Mr. Dean says he finds very little, if any difference, in substance, between *Harrisii* and *longiflorum*. Naturally *Harrisii* is apt to be rather flimsy when forced to the utmost in a high temperature for early flowering. But when flowered under exactly the same conditions there's little difference between the two flowers, except in shape and habit.

A big batch of *calceolarias* seen at this place were the dwarf *Shower of Gold*. This is an excellent market plant, selling well; the color is an exceptionally clear gold, and it flowers profusely. The dwarf varieties are always preferable for market.

The *genistas*, seen here in quantity, were all plants left to their natural growth instead of being stopped back after the European principle. The long natural shoots are much more effective in decoration than the close-clipped plants, though the latter are more suitable for sale as pot plants.

In addition to Easter New York florists are expecting quite a harvest at the Inaugural Centennial. Some of the floral arrangements are to be very elaborate. Coming a week after Easter, this gives an opportunity for using stuff which come in a little late. Klunder has charge of the decorations for this occasion. Among the arrangements will be a tremendous bank of scarlet *geraniums*, consisting of a large number of plants.

Mr. Keller, of Bay Ridge, who, like Mr. Dean, goes in largely for Easter stuff, considers his shipments fully equal to last year, and trade prospects good. He grows the same line of stuff as Mr. Dean. Among his *hydrangeas* a good many were noted as being a remarkable blue, very much deeper than the average. *Azaleas* and *genistas* are extensively grown here, many of the latter being the imported stopped-back plants. There is no doubt whatever that while the demand for Easter flowers increases, it is essentially a demand for good flowers—in New York, at least. People who buy flowers know the class they want, and demand them.

Our friend Mr. Peter Henderson has acquired another novelty—a political boom. Some of the New Jersey papers are suggesting him as a nominee for Governor of that state. They say he would carry every agricultural county with large majorities, and point out the fact that his ability and integrity make him a candidate likely to receive enthusiastic support from all. Well, they couldn't find a better candidate, but political honors are hardly likely to appeal very strongly to Mr. Henderson's ambition.

EMILY LOUISE TAPLIN.

New Orleans.

The third annual exhibition of the New Orleans Hort. Society has just closed

after having been open four days. Odd Fellows Hall was transformed into a very handsome parterre, and as one entered the sight was really beautiful. There was a very fine general collection of plants and the prizes were quite equally divided among the exhibitors.

The finest exhibits were certainly those of Dr. T. G. Richardson with his fine collection of stove house plants, and Mr. Ben. Onorato with a fine collection of orchids in bloom and other plants. The principal attraction was in the display of cut flowers and floral work; the florists this season displayed a fine taste in the arrangement of their flowers. The prizes were about equally divided between Messrs. Eble, Menand and Eichling.

The show was very poorly attended this season and the society is very much out of pocket. The people seem to have had enough of shows of this kind for the present. H. A. DESPOMMIER.

April 13.

Montreal.

The Montreal Florists' and Gardeners' Club had its first flower show March 26 and 27, and it was a decided success in every respect. The event was looked forward to by the members of the club with no small degree of interest, as those were not wanting who looked upon the undertaking with disfavor and prophesied a failure; the committee who had charge of the affair paid no heed, but worked quietly on with the firm determination of making it a success. The weather on the morning of the 26th made it a little difficult to transport plants, there being a few degrees of frost, but they got there.

The room chosen for the exhibition was the hall of the Frazier Institute which is about 80x50 feet, and on the ground floor; it was found very suitable in every respect except in size, it being found too small at the last moment for the quantity of stuff to be displayed. The arrangement consisted of a range of tables around three sides of the room about three feet wide, the other end being occupied by a raised dais, at each side of which was a space of about twelve feet which was occupied by the two collections of orchids of Messrs. W. Wilshire and J. Bell. The body of the room was occupied by a number of tables 6x6 feet, upon which were arranged groups of stove and greenhouse plants, some of the groups having a few beautiful orchids among them. Upon the dais were arranged some large palms, cycads, dracaenas and *Harrisii* lilies; upon the wall over the dais was a large trophy with the letters "F. and G. Club" wrought with red carnations on a white ground, draped on each side by the flags of Canada and the United States, with a bank of *genista*, *Harrisii* lilies and *spiraea* in front of it.

Upon the side tables were arranged the exhibits of cut roses, carnations, hyacinths, tulips, narcissus, etc. in glasses, also the exhibits of hydrangeas, *spiraeas*, lilies, hyacinths, tulips, narcissus, etc. in pots and pans; also on the steps of the dais were boxes of hyacinths, lily of the valley, etc. The six iron pillars were tastefully wound with green and dotted with *Niel* roses, and garlands of green hung from pillar to pillar and across the room diagonally, dotted with *Niel* roses about six inches apart. A large quantity of bunting was also displayed around the walls, giving the place a very rich and cheerful appearance.

Among the exhibitors of tables of plants were John Walsh, gardener to W. W. Ogilvie, Esq.; W. Wilshire, gardener to ex-Mayor Abbott; J. Bell, gardener to

Robt. McKay, Esq.; J. Kirkwood, gardener to R. B. Angus, Esq.; J. Bland, gardener to James Barnett, Esq.; John Dunbar, gardener to Montague Allan, Esq.; John Doyle, gardener to Mr. Elmenhorst; John Eddy, gardener to Mrs. Redpath; J. Horsman, gardener to A. Robertson, Esq.

In roses, Colin Campbell showed a large collection; his *Mermets*, *Cooks* and *Gontiers* were first class in form, size and color; he also had a vase of nice *Puritans*. Jos. Bennett, manager of the Montreal Floral Nurseries, made a fine display of roses, his *Cooks*, *Brides*, *Niphetos* and *Mermets* were remarkably fine. Mr. Doyle made a good display, conspicuous among which were some splendid *La France*. P. McKenna & Son also had a good display, among which were a bunch of gigantic *Am. Beauties* of a splendid color. Mr. Betrix showed some remarkably fine blooms of *rhododendrons* which were much admired.

In bulbs, Mr. Bennett had a very large exhibit both cut and growing, his boxes of hyacinths, narcissus, lily of the valley, tulips, etc. were extra fine and were much admired. Mr. Campbell also made a very large display of bulbs both cut and growing, his pans of hyacinths, tulips and narcissus were really fine, he also showed some *eucharis* in fine bloom. Wilshire Bros., of Park Avenue Nurseries, showed some hyacinths in pots which were unsurpassed, their exhibit of *Lilium Harrisii*, *Primula obconica* and *cyclamens* was very creditable. P. McKenna & Son showed some fine *Hydrangea Thomas Hogg* and *hortensis*, also some good *Harrisii* lilies, *cinerarias* and *spiraeas*. James Nairn made a fine display of *Deutzia gracilis* and *callas*.

In orchids, W. Wilshire had a very fine display, among which were *Phalaenopsis Schilleriana*, *Dendrobium nobilis*, *D. crassinode*, *D. Wardianum*, *Lycaste Skinnerii*, *Saccolabium giganteum*, *Adiantum*, *Odontoglossum Alexandrae*, *Cattleya Trianae*, *Trichopilia fragrans*, *Cypripedium venusta*, *C. villosum*, *C. Boxallii* etc. Mr. Bell also had a large collection, among which were some splendid *dendrobiums*, *cattleyas*, *coelogynes* and *cypripediums*. Mr. Walsh had a few very fine orchids among his collection of stove and greenhouse plants, noticeable was one piece of *Oncidium sarcodes* with a spike over six feet long.

The display of *Harrisii* lilies was a great feature of the show; they were there in all sizes from the perfect specimen thirty inches high with six expanded blooms, to the giants six feet nine inches high with nine blooms—the latter were growing in 6-inch pots without stakes or support of any kind. W.

Boston.

Easter Sunday, with its anxieties and worry, its hard labor and sleepless nights has come and gone once more, leaving behind it the usual legacy of tired feet, red eye lids and lame fingers. The greenhouses that a few days ago were resplendent with snowy lilies, bristling *spiraeas* and dazzling tulips are shorn of their beauty and nothing is left of their former glory except ugly stumps and unsightly rubbishy heaps. And now the growers and the dealers are sitting down and counting the cost and estimating the profits which, when computed, will serve as the true test of the Easter luck for the year 1889, and the wholesalers with trembling fingers and anxious faces are opening the letters from their customers which tell of the safe and satisfactory ar-

rival of their shipments, or the other story of the ruin wrought by the warm weather, the melted lilies and tulips, the dismantled roses and shrivelled carnations, which bring upon his shoulders imprecations both loud and vigorous and cause him to wonder at times what he is permitted to encumber the earth for anyway. It was a hot Easter in Boston. On Saturday the thermometer registered 88° in the shade, and how the roses and lilies did come in!

But a few days before everybody was predicting a famine. The avalanche did not arrive till Saturday, too late for the wholesalers to take advantage of it, and too much of it for the local trade to handle.

Enormous quantities of flowers were disposed of, however, the fine weather bringing out all the customers. The stores never did such a business for Easter before. Many of them had to turn customers away from inability to wait upon them.

Designs were but few. Cut flowers, particularly long stemmed roses and lilies constituted the greater part of the trade. These orders were mostly for Easter greetings among friends and for corsage wear. In the churches comparatively few cut flowers were used. Altars and chancels were banked with flowering plants, such as azaleas, lilies, astilbes, etc., an occasional rich cross of white flowers being about the only floral decorations seen.

For Sunday School children small flowering plants in pots were very generally substituted for the small bouquets formerly provided for this purpose, a sensible innovation, and one which the florists will not be likely to mourn over, as the profits on those small bouquets are but small compared with the labor involved.

Smilax was quite scarce and good carnations were far from plentiful. There were plenty of *Harrisii* and longiflorum lilies of finest quality, also astilbe and double white stocks.

There were but few candidum lilies in market as compared with former years, but the demand for these has fallen off to such an extent that there were enough for all requests. The market was deluged with roses on Saturday, and all were of finest quality.

Easter coming so late and the season being so unusually forward was most favorable for the plant trade. The flower stores were gorgeous in the extreme with great banks and masses of hydrangeas, azaleas and cytisuses, and it is safe to say that no church decoration in the city was or could be more attractive than the display in several of the leading stores.

Superintendent Doogue gave the public a great treat and an Easter show that is rarely seen in this latitude. He had the public garden in perfect order, the beds filled with thousands upon thousands of hyacinths and daffodils, with hosts of pansies and daisies. These hyacinths were all started in frames and were bedded out during the week preceding Easter, thus securing a uniformity of height and color which could not be obtained by fall planting.

Some florist has again been at the stale old business of stuffing the reporters. The Boston *Herald* is the victim this time. Here are a couple of choice extracts.

"Of course many ladies will wear at church on Easter day the corsage bouquets of roses and other flowers. These form a valuable addition in the way of adorning the new spring costumes. The work of making up these bouquets commenced early in the week, the flowers being kept in cool rooms where they are well supplied with water, until the time for their delivery

A BIRTHDAY GIFT

arrives on Saturday. A handsome corsage bouquet can be bought of any of the florists for \$10. Pretty boutonnières for gentlemen's wear are selling for \$1 each."

One Tremont street florist informed a *Herald* reporter that his contract to decorate a Back Bay church would call for the use of \$4,000 worth of materials. Besides this sum \$1,000 would probably be expended for labor in arranging the flowers."

The originator of the above doubtless wants to see a few more flower stores going, so he tells the public there is lots of money in it. Generous soul!

W. J. S.

A Birthday Gift.

Our illustration is from a photograph of a basket arranged for a birthday gift by Mr. H. H. Battles, of Evans & Battles, Philadelphia.

The excellence of the engraving makes it possible for readers to name each of the flowers used and renders unnecessary any notes as to the varieties.

The arrangement we consider most excellent and worthy of a careful study by all. Note that each individual flower is so placed as to fully display all of its own grace and beauty, the combination of the dark and light colored roses, the dark *oncidiums* or *odontoglossums* against the white *eucharis* blooms, the careless grace in which the carnations and their foliage are used on the handle and in the basket below, the natural manner in which the spray of *Cecylogyne cristata* falls from the *adiantum* ferns above and the entire absence of formality in the whole arrangement.

We are glad to be able to place before our readers such an excellent engraving of such a beautiful and instructive subject, and trust that it will result in converting to more natural methods some of that altogether too numerous class who turn out those stiff, formal arrangements in which the grace and loveliness of each

flower is annihilated by crowding together as compactly and evenly as the blades of grass in a smoothly shaven lawn.

In the "elevation of our profession" the retail florist has a grand opportunity here to do his share. The better class of flower buyers—people of wealth and refined tastes, and who are large buyers—are quick to appreciate a really artistic arrangement and will pay well, not only for fine flowers, but for the taste and skill displayed in the arrangement.

Baltimore.

To read of such exhibitions as the one held in Philadelphia recently is almost enough to make us of Baltimore clothe ourselves in sack cloth and ashes, in view of our own unappreciated efforts to get up a really successful exhibition. The March show of the Maryland Hort. Society was, to put it tenderly, a failure,

notwithstanding the fact that the officers of the society and the few exhibitors who put in an appearance, did all in their power to make the affair a success. Jno. Cook had, as usual, an attractive display of roses and other cut flowers; Halliday enhanced his exhibit by a fine display of seeds, implements, etc.; there were also some unusually fine plants shown, but five or six exhibitors—or five hundred exhibitors for that matter—can't make an exhibition a financial success any more than one swallow makes a summer. The citizens of Baltimore are easily excited; they will grow wildly enthusiastic over anything from a base ball match to the Washington Centennial, unless the something be a flower show, and then Baltimoreans don't enthuse worth a cent. And yet our citizens are passionately fond of plants and flowers; this taste is increasing rapidly, trade on the whole is improving every year, so that it is somewhat incomprehensible why our exhibitions generally lack public support.

Arbor Day—April 10—was pretty generally observed here, and a vast number of trees were planted in the public parks and elsewhere. For two weeks previous the country was completely overrun with tree peddlers who invariably proved equal to the occasion. One of these tourists returning from a trip through the rural districts, sold the residue of his stock—a pair of silver maples—for “the real genuine article” to a verdant customer near Ellicott City, who wanted Copper Beech. The v. c. has since learned of the deceit practiced upon him and now his only ambition in life is to be alone with that tree-man for five minutes in some secluded spot, far from the haunts of men.

I had an interesting talk on orchids recently with Mr. McRoberts, of the Rosebank Nurseries. Mr. M. is positive that the “orchid craze,” so far from being on the decline, is only in its infancy. Commercial growers begin to realize “that there is money in orchids.” *Laelias*, *lycastes*, *oncidiums* and a good many cattleyas can be grown easily and bloomed surely. Moreover most of them may be grown successfully in pans or baskets and hung up about the house, thus utilizing space generally unoccupied. And as Mr. McRoberts puts it: “Materially increasing returns from the same amount of glass.” He considers the great durability of orchid flowers an important point in their favor that cut flower men should not overlook. As conclusive evidence of the increasing popularity of orchids, Mr. M. stated that trade during 1888 had been fully double that of '87. A. W. M.

April 17.

Chicago.

M. B. Farrell, an old time florist, dropped dead on his place at 4019 Ellis avenue April 18. Heart disease was given as the cause of his death. He was at one time a practicing physician and afterward an operator on the Board of Trade.

On North Clark street H. Boettner has removed from No. 215 to No. 645, and Mme. D. Foertsch from No. 590 to No. 618. H. Wittbold has taken the adjoining store and combined it with the one he already occupied, giving him some forty feet of show windows.

At the last meeting of the Florist Club blooms of thirty-one varieties of narcissus, each one labeled, were on exhibition and were examined with interest by the members.

The Easter trade was very satisfactory.

There was an abundance of nearly all flowers, the main shortage being on candidum lilies. The weather was very favorable. Prices were a trifle lower than last year, but there was more stuff to sell and the result was satisfactory to both the grower and retailer. A falling off was noted by several dealers in the call for callas, the lilies most in demand being candidums and *Harrisii*. The lessened call for callas is attributed by some to the fact that so many “salted” calla blooms which soon “melted down” after being taken from the ice box or cellar where they had been held, have been sold at former Easter times that buyers are beginning to look with suspicion upon them, and ask for other lilies. There was as usual an increased sale for blooming plants.

Tulips are not in as brisk demand as formerly. Several large growers state that there has been no money in them to the grower this season.

BY I. FORSTERMANN.

There are comparatively few orchids suitable for the cut bloom trade if we consider that of the almost 4,000 species known only forty-four varieties are suitable for the trade. These are divided into the following genera which I will enumerate according to their value and usefulness: cattleyas, 7; cypripediums, 7; dendrobiums, 5; *laelias*, 5; *oncidiums*, 7; *phalaenopsis*, 3; *calanthes*, 3; *coelogynes* 2.

All these require a good drainage when potted, as they grow mostly on the bark of trees or on the surface of rocks with the roots exposed to the air. Pots and wooden baskets are better for orchids than blocks; as a rule plants with strong bulbs which can support themselves upright are best placed in pots, they will then get more moisture and consequently make stronger bulbs. Plants with bulbs hanging down or such with drooping spikes should be placed in baskets.

The cattleyas are undoubtedly if not the most graceful, the most gorgeous and profitable orchid for a florist to grow, and the best varieties for said purpose are *C. Trianae*, *C. Percivaliana*, *C. Lawrenceana*, *C. Bowringiana*, *C. Gaskelliana*, *C. Mossiae* and *C. Mendelli*.

Cattleya Trianae if grown from imported plants should be potted in April and May in fibrous peat or fern roots intermixed with a little sphagnum. It is advisable to pot the plants high so that they can be watered with impunity with the hose which saves labor, plants potted low will not dry out as quick and watering with the hose would undoubtedly prove too much for them. During summer the plants require plenty of air and moisture until the bulb is fully made, after the new bulbs are formed less water should be given. The plants thus treated will begin to flower in the latter part of December and flowers can be had until the middle of April, providing a sufficient number of plants are grown.

Cattleya Percivaliana requires the same

treatment as *C. Trianae* and can be had in flower from November to March; so does *C. Lawrenceana* which flowers from February until the latter part of April.

Cattleya Bowringiana is a very easy growing and free flowering orchid which has not as large flowers as most of the other cattleyas, but carries from 10 to 14 flowers on a spike. It requires plenty of moisture, but care should be taken in watering while the new growths are small as the water collects in the heart and they damp off. The growing season is from April to October or November when it begins to flower. This cattleya flowering as it does before the new bulb is fully made up should be grown for four weeks after flowering until the new bulb is full grown, afterwards it should be kept cooler and less water should be given.

Cattleya Gaskelliana flowers from the latter part of May until July and should—as it flowers before the bulb is well ripened—be grown on after it flowers. From September on it should have less water and also be kept cooler, otherwise the plant will begin to grow again. *C. Gaskelliana* may be forced and brought into flower undoubtedly by Easter, but the plant would make in summer a second growth which would weaken and eventually kill the plant.

Cattleya Mossiae flowers in the latter part of April and in May and as the plants stand in flower sheath from November until May, care must be taken that they are not kept too dry in winter. The resting of this plant should consist in keeping it cool and giving it very little water. The same treatment is required by *Cattleya Mendelli*, which flowers in May and may be kept until June. Both cattleyas begin to grow after flowering and should then be treated like *C. Trianae*.

Cypripediums are in some points such as durability and variety just as useful as cattleyas and will come more into favor as soon as the more showy varieties can be purchased at a lower figure. I could enumerate very many useful varieties for cut bloom, but the pocket of the grower would not permit him to purchase them in quantity. Cypripediums do not want any rest, although it is advisable not to grow them too quick. The following species are at present the cheapest and easiest to grow: *C. Spicerianum*, *C. insigne*, *C. Harrisianum*, *C. Lawrenceanum*, *C. villosum*, *C. Boxallii*, *C. argus*. The above named species are best potted in a mixture of peat and fern roots and sphagnum, although I have seen some of the best grown cypripedes in sphagnum only.

Cypripedium Spicerianum requires plenty of heat and moisture during the growing season, which is from April until October or November, when it begins to flower and may be kept cooler after flowering. *C. insigne*—one of the easiest orchids to grow—does well if put outside in a half shady place in summer and can be brought on in flower from November until the middle of April. To have it in flower late it should be kept in a very cool house after taking it in from outside.

Cypripedium Harrisianum can be had in flower from November to March and grows very easy, as do *C. villosum* and *Boxallii*, which flower from January to April. The three last named species require heat and moisture up to the flowering time, and if a cooler place can be given them for two months after flowering they will profit by it.

To *C. Lawrenceanum* only of late more attention has been paid and it looks as if it will prove very profitable on account of

VIEW IN THE CATTLEYA HOUSE AT MR. ERASTUS CORNING'S, ALBANY, N. Y.

flowering twice a year, once in the fall and again in April. The plants seem not to suffer through over flowering and look just as healthy as those that have been allowed to flower only once a year. To succeed in flowering the plants twice a year they ought to be grown very warm and a good supply of water should be given.

Dendrobiums come very useful for cut bloom as they flower at a time when flowers are scarce and especially as they may be brought by proper management into flower about Christmas. The most suitable species for florists are: *D. Wardianum*, *D. nobile*, *D. Dearei* and *D. Jamesianum*.

The three first named species require an abundance of heat, moisture and air in the growing season, which begins in March and April and lasts until the bulbs are fully made up. They should afterwards be kept cool and dry to give them a rest before flowering and to prevent them from starting into growth again, which would interfere with their flowering. If the plants are forced into flower for Christmas care must be taken that they do not grow too far and they should if possible be treated cool again until March. The bulbs made by sunheat will

be far stronger than those made by plants that are started early in January or February by fireheat, therefore it can easily be seen that this dendrobe can be grown with very little expense of fuel.

The next best species is *D. Dearei*, which has beautiful pure white flowers and can be had in flower from November until March in succession. *D. Dearei* requires much heat and moisture while growing, and can be well grown together with the *phalaenopsis*. It flowers with the young bulb and should be kept a little cooler and drier after the young bulbs are formed, which is about a month after the plants flower, but it does not require rest and cool treatment to such an extent as *D. Wardianum* and *D. nobile*.

D. Jamesianum is a cool house dendrobe and flowers from March to May, it can be grown in the cool house and outside during summer if a suitable half shady place can be given. The plants should be kept dry for a time after they have flowered to enable them to form good strong eyes. All the dendrobes mentioned grow better in a mixture of peat and sphagnum only.

Laelias require similar treatment to cattleyas, the greater part of them make their growth during summer and flower

soon after and like therefore plenty of heat and moisture with abundance of air during the growing season. The material for potting should be the same as that used for cattleyas. Of the many species this genus contains *L. purpurata*, *L. Perrinii*, *L. anceps*, *L. autumnalis* and *L. albida* are the most useful for cut bloom.

Laelia purpurata is one of the finest orchids and can be brought into flower from March to May, its flowers are larger than any of the cattleyas mentioned, it makes bulbs and flower sheaths in the fall, therefore should, like all cattleyas that remain a long time in sheath, be kept moderately moist in winter and grown on again soon after flowering. *L. Perrinii* is very useful for cut bloom, as it flowers from October to December, when few orchid flowers can be had. It makes its bulbs late in the fall and flowers before they are fully made and should therefore be grown on for about a month after it has flowered, and then be kept cooler and less water be given to prevent it from starting to grow again. *Laelia anceps*, *L. autumnalis* and *L. albida* make their growth in summer and flower with the young bulbs from November to January; they start to grow in April and

May and should be placed in an airy house with much heat and moisture; after flowering they are best kept moderately dry and cool.

Odontoglossums have been very little tried in this country for commercial purposes, the best results in growing the cool species have been attained in private collections and in nearly every instance by growing them in north houses. The only fault to find with these houses is that the bulbs of the plants can not get well ripened therein and will produce only a small percentage of bloom. I have occasionally seen in private places that the north house was kept considerably warmer during the time the bulbs were forming and a good supply of flowers was the result. A cheaper way is to keep the plants in a half shady place outside in the summer and bring them in the fall inside again in a temperature of 55°. The following are the best varieties suitable for the trade: *Odontoglossum crispum*, *O. Pescatorei*, *O. citrosum*, *O. grande* and *O. Rossii majus*.

O. crispum (more generally known under the name of *O. Alexandræ*), and *O. Pescatorei* can be had in flower from December to May; they are both of very easy culture, the only difficulty is to keep them cool enough from June to September, which can be overcome by putting them outside during these months. No orchids will repay better the trouble than these two species when successfully grown. In both of them endless and valuable varieties are found; they take little room, require little fire heat and are not frequently attacked by insects. They have we may say their rest in summer and begin to grow in August and September when they should be potted, but care must be taken that the new roots are not disturbed. They are best potted in a mixture of fine peat, sphagnum and half rotten leaves. If the bulbs remain soft and do not ripen they will not flower well, so attention should be paid to that, and if we can not give them enough light to accomplish the purpose they ought to get a little fire heat during the time the bulbs are forming. They also require a very liberal supply of water and air.

O. citrosum requires more fire heat than the two above named species and will flower from January to May; it likes plenty of air, moisture and light in its growing season during the summer, it must be kept perfectly dry in winter until it shows flowers which appear with the young growths and must be grown on after flowering.

O. grande is the largest variety of the genus and flowers from September to November, it should be grown with an abundance of air in the summer and be kept cool and dry when the blooms are over. *O. Rossii majus* can be grown well outside in summer, it flowers with the young growths from October to January and remains in perfection until March; it requires to be kept dry in the fall before the new growths which bear the flowers are forming. *O. Rossii majus* and *O. citrosum* do well placed in baskets while the others are best potted.

Oncidium are very free flowering orchids, and it is astonishing to see small plants on blocks or in baskets bear enormous spikes of flowers, it is therefore good to cut out part of the spikes or flowers so as to ensure a good crop of bloom the following year again. *Oncidium varicosum*, *O. tigrinum*, *O. Jonesianum*, *O. sarcodes*, *O. Forbesii*, *O. Marshallianum* and *O. Cavendishianum* are perhaps the most profitable ones to

grow; nearly all the oncidiums grow best in baskets, some do well on blocks; they like plenty of water, air and light when growing, and when at rest must be cool and dry. Oncidium should if possible not be started before May, otherwise they will flower too soon. They need a good supply of water and air during growth, will grow well outside in summer and flower in November and December. *Oncidium Forbesii* requires the same treatment and flowers about the same time. *O. Marshallianum* and *O. sarcodes* flower from February to May and should be kept cooler in winter, otherwise treated the same as the former species. *O. tigrinum* and *Cavendishianum* do well grown in pots, the former flowers from October to December and requires like nearly all the Mexican orchids, an abundance of air, light and water during its growing season, which is between May and October; the bulbs must be well ripened to ensure free flowering; *O. Cavendishianum* flowers from January to April and should never be kept very moist when not growing. *Oncidium Jonesianum* will with proper management flower in November and December; to attain this it should be started before June, it grows best on blocks and enjoys abundance of heat and moisture during the time of its growth, but should be watered so that it can easily dry off again; after flowering it ought to be kept cool and dry.

I should have enumerated *phalaenopsis* before if it was not for the difficulty attendant upon their growing; the species best suited to grow are *P. amabilis*, *P. Schilleriana* and *Stuartiana*. They all require great heat and attention, in most instances they flower themselves to death, the flowers should not be left too long on the plants. They thrive best in an even temperature, varying from 65° to 70°, and they like perfect shade in their growing season in summer and more light in the fall before they begin to bloom. Peat, sphagnum and half rotten leaves is a good mixture to pot them in, baskets and glazed pans are preferable for trade purposes to the growing of them in high cylinders; all the species require the same treatment.

Calanthes are very easily grown and flower very freely during the months of December, January, February and March. They like a mixture of rough sod and cow manure with heat and moisture while growing and perfect rest after they have flowered; they may be started into growth in March or April. The best varieties to grow are *C. Veitchii*, *C. vestita* and *C. vestita oculata gigantea*.

There are very few of the genus *cœlogyne* suitable for commercial use, the best now for that purpose are *C. cristata* and *C. ocellata*. Both species like a good supply of water during the growing season, which is from April to September. *Cœlogyne cristata* flowers after the new bulb is formed, while *C. ocellata* flowers with the young growth from February to April. The former should have a rest after it has flowered, while the latter must be grown right along after flowering [Read before the New York Florist Club April 10.]

An Arrangement of Orchids.

The simple but elegant combination of orchids shown was arranged by Mr. H. H. Battles, Philadelphia, to whom we are indebted for the photograph from which the illustration was made.

While it would probably be difficult for a florist in a small town to obtain an adequate price for such an arrangement,

except possibly on some extraordinary occasion, the retailer in the larger cities who caters to the tastes of people of wealth would we think find that he would meet with little trouble in obtaining a price which would pay a profit, and in addition bring him trade which he might not otherwise obtain.

The lasting quality of orchid blooms is a strong point in their favor and greatly lessens the chance of their spoiling before a customer is found. This also increases their value to the purchaser, who may enjoy their beauty for a length of time in which numerous lots of other flowers would have faded away.

While the daily press has done much to excite popular interest in orchids, it has done an injury by ridiculous exaggerations as to the prices paid for plants, and many people have come to look upon all orchids as very costly. The trade should endeavor to disabuse the mind of the public of this idea. While numerous sales have been made at extravagant figures, varieties which can be obtained at a very moderate price are frequently far more beautiful than those for which wealthy collectors pay large sums.

Long Island Notes.

BY WM. FALCONER.

ON MY WAY to New York if I can spare an hour or so I stop over a train at East Hinsdale to visit my neighbors. This is both pleasant and instructive.

CHILD'S PLACE comes first as it is right at the station. He would like me better if I didn't tell you anything about his new plants. But there are few places around New York where one can find more odd or uncommon plants in stock or on trial than here.

SOUR GRAPES is what he shall probably now call *Euphorbia heterophylla*. Last summer I proposed for it the name of "Summer-blooming Poinsettia," but friend Goodell, of Dwight, Mass., didn't think this name pretty enough, so has sent it out this season under the name of "Fire on-the-Mountain." But the people of the south where it grows wild call it the "Hypocrite Plant"; now, while we shall gladly accept their plant, we must reject their name for it.

HARDY CARNATIONS.—Mr. Miller finds a good deal of difficulty in striking some of our hardy summer-blooming carnations from cuttings. This reminds me that a few years ago I saw a fine "strike" of them with John Thorpe. He put them in late summer in box-flats which he kept out of doors against a north wall and gave them lots of water.

GAZANIA SPLENDENS is in bloom in the greenhouse. "Miller, what's this, and where did we get it, and can we get up stock enough of it to catalogue it?" are questions that rush from Mr. Childs as he beholds the handsome little composite. Years ago it was abundant enough, but nowadays it seems to have dropped out of general cultivation, and like many other old-time plants can rarely be seen away from places that still cling to miscellaneous assortments of plants.

SOMETHING NEW.—*Ionopsisidium acaule*.—Some pretty little cushions were in bloom. It is a dense, little annual, of the most copious nature, a native of Portugal and Morocco. New! It was a common annual in my father's garden before I was born.

CEREUS PALMERI.—I used to think that the little beauty I had at Cambridge was unique in cultivation, and many a loving look and kindly word did the late

AMERICAN FLORIST CO.

AN ARRANGEMENT OF ORCHIDS

Dr. Eagleman, of St. Louis, bestow upon my pet. But now think of my chagrin as I behold a stack of plants of it, plump, fresh and spotless, dry as a chip, piled up on a bench in Childs' packing room, newly in from their native wilds.

AND *CEREUS GIGANTEUS* too! Although this cactus becomes a timber tree in Arizona to Sonora, and may be well remembered by those who saw the fine specimens sent to the Centennial exhibition at Philadelphia, we can only expect to grow it successfully by beginning with small plants, say about 12 inches or less in height. Large specimens may keep plump and green after being brought here for a year, or rarely two, but I do not know of an instance where they have

become established, fresh, full rooted plants.

ACHILLEA PTARMICA fl. pl.—One would think that ere now the people would have got surfeited with this plant, but no, they haven't. Mr. Miller tells me that they have already this season sold 10,000 plants of it.

FIGS.—He had a lot of them raised for him in Florida. The stems had been brought down flat to the ground and were rooting all along, but the stock was far too large for mailing. Noticing this when he got them last fall, he cut up the naked rooty stem into one-eye pieces and laid these thickly in flats filled with earth in the greenhouse. Every eye has started into growth. He will plant them

out over summer and lift them next fall.

A *YELLOW IPOMEEA* in Yucatan.—Mr. Miller tells me that Mr. Hogg (of Japanese fame) was telling him of a handsome yellow ipomoea he saw growing plentifully in Yucatan. Years ago he sent home some plants which he gave to Isaac Buchanan, but, so far, he has not heard of their blooming in cultivation.

MESEMBRYANTHEMUMS.—Mr. Miller asks: Where can we get a set of these? A few species, notably *M. spectabile*, are common in cultivation, but I do not know where a large assortment can be had. I advised them to visit Louis Menand, Menand Station, Albany.

L. MENAND is a grand old Frenchman, now about 80 years of age, and who has been settled for nearly half a century as a florist and nurseryman near Albany. Cactuses and succulent plants generally are his dearest pets and he loves them with a grandfather's fondness. His greenhouses are also a storehouse filled with many New Holland and East Indian shrubby plants and other decorative subjects not infrequent in gardens thirty to fifty years ago, but now almost unknown among us. But although he clings so tenderly to his old loves he is as progressive as the youngest among us, and a specialist in orchids, and has a good collection of all manner of fine greenhouse plants.

C. H. ALLEN & Co. have removed from Jamesport to their new bulb farm at East Hinsdale, and are busy getting in their stock. Paeonias, irises, some lilies and other hardy stock are planted, and now they are sowing gladioluses. Valotas are being set out in frames. And they are about to put up some greenhouses for the cultivation of hybrids and species of amaryllises and other bulbous plants and for propagating purposes.

AND OUR MUCH respected and scientific friend Mr. C. L. Allen (father of the above C. H. Allen, and also of W. S. Allen, the cut flower commission agent, New York), in order to be beside his children and grandchildren has given up his place at Garden City and also removed to East Hinsdale, near by his son's bulb farm.

GLADIOLUSES.—Louis Siebrecht was busy planting out gladioluses in the open field in rows 2½ feet apart. He had got most all of his bulblets planted, but would not yet plant out all of his mature bulbs, because in addition to increase of stock a succession of cut flowers is a consideration with him, and for this purpose he will plant in succession till July.

LILIUM HARRISII—He grows them in pots for cut flowers. All those that have been cut from were turned out of their pots and planted out in rows in the open field recently, and the earth plowed up pretty well on to the stems.

BONE FLOUR AND BONE MEAL AS FERTILIZERS.—He manures his land broadcast with barnyard manure and plows it in, then in the furrows opened for his bulbs he gives a liberal dose of bone flour. For pot plants he likes bone meal best, but for field crops he much prefers the flour.

HALLOCK'S WHITE GLADIOLUS.—"Ah, but that's the gladiolus if one could only get hold of it," remarked Mr. S. "A year or two ago I tried my best to get some bulbs of it, agreed not to let a bulb of it out of my hands, in fact, offered to grow it for them, but no, nothing would induce them to let it out of their hands." Mr. C. H. Allen also tells me that as a white gladiolus of the Gandaveusis race,

it stands supreme. The Hallocks, a few years ago, bought the stock of it from a Boston grower.

TALKING ABOUT GLADIOLUSES I may say that for cut flower purposes there is a brilliant future for the *Saundersii* and *purpureo auratus* types, hybrids and varieties, and the hardiness of the former is a marked point in its favor. Indeed, for cut flowers, Mr. C. H. Allen assures me they will yet supersede all of the *Gandavensis* race.

TULIPS.—Lots of them are in bloom in a greenhouse, and a multitude in boxes out in an open sided wagon shed are being retarded for Easter, while for a succession to these he has just set a light board frame around and sashes over some closely packed outdoor beds. *La Reine*, white, *Rose Gris de lin* and *Yellow Prince* are especially fine with him.

CANDIDUM LILIES are very fine. He finds there are two forms common in cultivation; one has solid, somewhat pointed darkish tipped bulbs and bears poor thin flowers; the other and best one has flatter and looser bulbs, white throughout, and bears blossoms of waxy whiteness and substance.

AMARYLLISES.—Some *Defiance* amaryllises were in bloom in a corner. "Two years ago I paid \$24 for a dozen bulbs, now I have about a hundred and I will plant these out in summer and hope to increase them to five hundred before next winter, then I'll have a nice little stock and go in for flowering them," he told me. There is no doubt of it, amaryllises are bound to soon become a popular cut flower. There is now no demand because there is no supply. They live forever, multiply two to five fold a year, and are easily grown, easily kept, and with reasonable intelligent care bloom of a certainty. John Thorpe believes in them and has a large young stock of some sorts, notably *Empress of India*. Siebrecht & Wadley are quietly getting up a stock of them in the West Indies, and Mr. Wm. Hamilton, superintendent of the Allegheny City parks, writes me that he now has 1,000 plants in bloom.

SMILAX.—He doesn't keep over any of his old plants. He raises fresh plants from seed every year and treats the crops more as if it were an annual than a perennial.

NARCISSUS POETICUS is in tolerable abundance, but it isn't so desirable or profitable as the earlier form, namely, *N. ornatus*. But as *ornatus* is expensive he saves every bulb for future use. Every bulb of *ornatus* will bloom and he nearly always gets two scapes from a bulb.

KEEPING "JACK" ROSES IN THE SHED.—"Ah, this is the way to keep them fresh—with a wet blanket over them," said he, as he showed me a large flat filled with roses in his cool, dark, bulb storage house, and with a wet cloth over them.

MARECHAL NIEL ROSE is in bloom. Mr. S. finds that it does not do so well upon its own roots as it does when worked upon some other rose; besides, blossoms produced on own-root plants have not the substance or lasting qualities that those from "worked" plants have.

CHRYSANTHEMUM PELICAN.—He has gotten up a nice stock of this variety, not for fall but for spring blooming! that is if everything turns out satisfactorily. His neighbor, Julius Scharff, took in four blooms of it last week to W. S. Allen, the commission agent in New York, and got \$2 for them. "Ah, but they were beauties."

CHRYSANTHEMUM MRS. N. HALLOCK.—He also has great faith in this variety as a late white, and so have I. Together with Ethel I regard them as never-fail late whites.

MILLA BIFLORA BULBS.—He keeps them in baskets dry and in a frost proof shed. He used to keep them in flat boxes as he did his gladioluses, but lots of them damped off, in baskets, however, they keep very well. He plants them out in rows in the open fields in summer and cuts and sells the flowers from them. Increase of stock is obtained from seed. These home-grown bulbs are as big as *Gladiolus Colvillei* bulbs, and much bigger than those imported from Mexico.

CARNATION MAY QUEEN.—No wonder Mr. Chitty, page 356, has such a good word for this lovely pink variety. Mr. S. has a long span-roofed house filled with it; it has been in bloom since last fall, and now its cleanness, vigor and luxuriance of flower stems remind one of a field of rye. Mr. S. now gets \$2 a hundred for the blooms and he claims that the flowers will keep longer in good condition after being cut than most any other variety.

HE WON'T GIVE UP *Hinze's White* in favor of *Silver Spray* yet awhile, till the latter shows a better disposition in the propagating stage. How does it behave in its youth with other florists?

WHILE ANNA WEBB is a splendid carnation for earlier work, he does not find it so good as late as April. *Black Knight* looks good, but its blossoms burst badly.

IN FRAMES OUTSIDE he has a large lot of carnations. He prefers *Portia* for this work, as he finds it is one of the hardiest of the mouthly varieties. He plants them thickly in the frame in fall and merely covers the frame with sashes over winter. These carnations keep perfectly clean and bloom full in summer.

LILIUM BATEMANÆ FROM SEED.—I sowed a lot of seed of it January 10th last in shallow boxes filled with light earth and chopped sphagnum moss and surfaced with sphagnum, and at once put them out into a cold frame where they have been ever since. In the second week of February the earth froze solid in the boxes. But now, the middle of April, the young lilies are coming up beautifully. Indeed, *L. Thunbergianum* in most of its forms displays the same ease of germination.

PERENNIAL PHLOXES sown last fall in boxes wintered in cold frames are now coming up nicely, and that too with barely any trouble. Had I sown them in the greenhouse in spring what a lot of room they would require, also attention in the way of shading, watering, hardening off and the like. As they are now they can stay in the boxes till the first of May when they will be a couple of inches high and in fit condition to transplant into rows in nursery beds.

The Rainbow Plant.

I am surprised that such a close observer as Mr. Falconer did not know that *Alternanthera paronychioides* major had been known around New York for the past six or seven years as the Rainbow Plant. In 1882 or 1883 a New York florist sold twenty thousand plants of this *alternanthera* to the late Miss Catherine Wolff for her place in Newport. This immense quantity was planted I believe in one bed, and framed in the emerald green of the Newport lawn, was the attraction of the season. Some one in looking at it remarked that it should be called

the Rainbow Plant, from its variable tints, and the name from that time stuck to it, and this name was so used by Peter Henderson & Co. in their catalogue for 1885. Surely if Mr. Falconer had kept his ears open, he might have heard the trumpet tones of Wm. Elliott descending on the merits of this Rainbow Plant at his auction sales for the past five years.

OBSERVER.

Geranium Bruanti as a Bedder.

Mr. Hill first called my attention to the value of this geranium as a bedder some two years ago.

The foliage and habit is shapely and extremely good, flowering qualities extremely profuse, trusses large and nearly always finely formed, thrown well above the foliage and uniformly poised with great beauty and regularity making a well balanced plant in nearly every case. The great value is in the floret. It is a happy medium between the semi-doubles which mould in damp weather, and the singles which drop. The petals are very large, free and effective, but not laid together so close as to cause them to mould which I have never seen it do. At the same time the large outer petals are united at the base by the inner ones so they do not drop, thereby giving the florets all the advantages of the semi-double and single form. It cannot be classed as a semi-double.

E. V. HALLOCK.

Mr. Dreer's Rose.

In the April 1 issue of the *FLORIST*, page 388, Mr. Dreer's rose is incidentally mentioned in the report on "A Propagating Feat and a Banquet." A charge is made that a comparison is intended between the rose in question and Mrs. John Laing, to the detriment of the former. Nothing was further from the writer's intention, and this statement is cheerfully made to counteract any erroneous impression that may still exist in some reader's minds. The rose referred to is not yet in commerce. It is undergoing a thorough trial, and it is confidently predicted by men whose judgment is accepted as of the first order, that further trial will prove that it will eventually supersede all light colored hybrids for very early forcing.

Philadelphia. EDWIN LONSDALE.

A Correction.

In my paper on violets on page 328 of the March 1 issue of the *FLORIST*, instead of "Mr. Cook was the originator of that charming variety Marie Louise" it should have read: Mr. Cook was the first to introduce that variety in this country.

M. A. HUNT.

A Seedling Amaryllis—Something New.

Under date of April 16th last, Mr. Hamilton, of Allegheny, writes me:

"I have a seedling amaryllis in flower that does not belong botanically to the natural order of amaryllidaceæ. In the amaryllis family we have: Perianth regular or nearly so, six parted; stamens, six distinct, with introrse anthers; stigma, undivided or three-lobed; fruit, a three-celled capsule. Now, I have a plant grown from a seed of a South African fragrant species, crossed with *A. Psittacinus* major. The bulb is larger and the stalk stouter than any of my other seedling amaryllises of the same age, and it has borne two flowers each of the following description: Perianth, regular or nearly so, eight-parted; stamens, eight,

distinct, with introrse anthers; stigma, four-lobed; fruit, a four-celled capsule. Size of flowers seven inches across; petals broad and of fine form; color, white ground with many narrow stripes of crimson lake, fragrant. All of the parts are perfectly normal." W. F.

Greenhouse Construction.

BY JOHN N. MAY.

17.

[Continued from page 391.]

Having decided upon the width and length of house to build, set the first post in front corner, square from that for the back corner post—18 feet 6 inches from outside to outside—then square from these for the whole stretch both back and front. If the house is to be 100 feet long, set the other two corner posts at exactly 100 feet from the first two posts. These four posts, also the posts which support the door jambs, should be dressed square on the two sides forming the corners. The front post should stand 4 feet 1 or 2 inches above the ground level of the house and the back post 8 feet 1 or 2 inches. When the four corner posts are all set commence at one end and set each row of posts at 3 feet 11 inch centers as described at page 391. Have each post perfectly plumb to outer lines and as near upright as possible. The corner post being set plumb both ways two lines can be stretched from these, one at top and the other near the bottom, this will keep the whole row to face true, but they should be as near true as possible both ways.

The post holes should be deep enough to make the post stand perfectly solid when well rammed up, and should be also quite solid at the bottom of the hole to prevent sinking; where the ground is of a soft nature below the bottom of the post a good flat stone placed under each post will be a great help to prevent them sinking when the weight gets on them; each hole should be not less than 3 feet deep below ground line. When the front and rear posts are all set get the correct height of each row from a level point of ground line, stretch a line tight from end to end at 4 feet for the front row from ground line, and 8 feet for rear row, sight it through to be sure it is true, mark each post by the line and saw them all of level. But if it is desired to save the water from the roof, then allow half an inch drop in the line from each end to the center—this will be a great help to the gutter in carrying the water quickly to the leader in center—but if the saving of the water is not desired then cut the posts all off level from end to end at the heights given above.

Fig. 2.

This done prepare the gutter plates—see Fig. 2. These should be made from good sound sticks, 4x8 inches, 20 or 24 feet long, and are dug out with an axe—starting at the end at nothing and sink them one-eighth of an inch to every four feet, this will give a fall of one and one-half inches in five feet and with a half

inch fall on the post make two inches or a fall for each 50 feet of gutter. This gutter will of course need planing out and dressing off smooth so as to allow the water clear running surface; in addition to this it should be plowed on the under side to receive the top edge of weather boarding and small plowings near each side to prevent the water from running down its sides and following in on to tops of posts, etc., and causing rot. When the gutters are all ready start at one end and place so the inside edge of plowing is set just far enough from face

Fig. 3.

of post to allow for the thickness of the sheathing which is to be nailed to post, saw the ends of gutters off plumb, cut directly over the center of post where joints come, butt them together, then nail with heavy spikes down through the plates into the tops of posts. But where it is not desired to save the water a plate like Fig. 3 can be used and it is much less trouble to make; it should be placed on the post in the same way as described for the other.

When the gutters or plates are all securely fastened commence to put on the sheathing—see Fig. 4. Start at the top next the plate, cut the top tongue or notch off and plane the top edge off so that it fits up close to the plate and nail securely to post, then follow with the next course, wedging each course up tight to the one above so that all the joints are close. This kind of sheathing—as can readily be seen—will turn all water off on the inside so that there is no chance for any to collect, even in the joints, as it can be made with a slight bevel. Over this tack a good rosin sized sheathing paper (do not use tar paper unless you want to run a great risk of killing the plants you may put in the house after it is built). After the paper put on novelty siding weather boards, running the top edge of same tight up into the plowed grooves of the plate as shown in Fig. 4, nail top edge only till the next course is fitted in closely, and so continue till the whole side is completed.

Where it can be procured the inside sheathing boards should be made of hemlock, as it lasts longer than pine; it should be mill dressed on sides going next to posts. For the outer boarding good white pine is probably the best if kept well painted. For posts locust is the best, next red cedar, then comes a variety of woods which can be used, but almost any of them soon perish with the heat and moisture of a greenhouse except the two named.

Hail Notes.

Mr. Charles E. Baker, of Liberty, Mo., insured his glass on the 20th of March, 1889. On the 8th of April he was visited by a hail storm which luckily did no damage. Mr. Baker writes: "It makes one feel good to know he is insured."

Eight hail storms have passed over different sections since the last meeting of the Society of American Florists. New

York, New Jersey, Illinois, Michigan, North Carolina and Missouri were the states visited. The "hail belt" seems to extend over a wide range of country.

To those florists who insure against fire and not against hail we would propound the following question: Have you been burned out in the past twenty years as often as you have been hit by hail?

Those desiring to insure their glass against hail may secure any information desired by addressing Jno. G. Esler, secretary of the Florists' Hail Association, Saddle River, N. J.

Henry A. Dreer, of Philadelphia, is one of the recent members of the Florists' Hail Association. Mr. Dreer insures 30,000 square feet of glass.

It is not necessary to be a member of the Society of American Florists to become a member of the "Florists' Hail Association." We are frequently asked this question, and therefore give this general reply. The "Florists' Hail Association" is incorporated under the laws of New Jersey without restrictions and is therefore open to all.

1,020,000 square feet now insured.

Losses From Fire.

The large number of losses from fire in greenhouses reported for the past winter season—almost invariably starting in the boiler pits and around the furnaces—leads us to ask if florists exercise as great care in protecting from fire as they should?

Fig. 4.

The actual loss on buildings destroyed is invariably very small as compared with the resulting injury to plants from smoke, frost, or both, which injury but few companies insure against, as it is considered an extra hazardous risk.

It certainly seems as though florists in general were not sufficiently careful in protecting themselves from the possibility of such losses. Where all the boilers are

located together the precaution taken by Messrs. C. B. Whitnall & Co. of Milwaukee, in having a solid brick wall with an iron door separating the greenhouses from the boiler room, is a comparatively inexpensive one when the greatly increased security is considered, for with the wall protecting your greenhouses the boiler house may be entirely destroyed without doing any serious damage to the greenhouses.

In making alterations and repairs the coming summer don't forget this point. Such a wall is well worth the expense of building it.

Standard Pots.

Below we give the names of those who have up to date placed themselves on record as agreeing to buy "Standard" pots only in future.

Table Decoration.

A short time since we supplied a table decoration which was very favorably commented upon.

The center-piece was of callas with their own foliage and a few fine ferns and asparagus, the ferns extending out over the white cloth at irregular distances. It was a ladies' lunch with covers for twelve and at each plate was a bouquet consisting of a calla and delicate flowers. Each bouquet was different; in one the small flowers were lily of the valley; in another yellow acacia; the third, freesias; others were small narcissus, pansies, cyclamens etc. I send a sketch of one of the bouquets.

C. B. WHITNALL.

What to Buy for Shrubs.

At the meeting of the Massachusetts Horticultural Society February 16, Jackson Dawson, gardener at the Arnold Arboretum, read a paper on "Shrubs that are Perfectly Hardy." The first question, Mr. Dawson said, is, What shrubs can be called perfectly hardy in our rigorous New England climate? To this he answered: Such shrubs as would live and grow and flower in any ordinary well prepared soil without any protection whatever, either by covering or by being planted in a sheltered position, and that when once properly established, would, with ordinary attention, give satisfaction to the planter. There are many of our finest shrubs that do well if care is exercised in the selection of situation and soil, or if they are protected for a few years until well established, that would not do well otherwise, but these could not be termed perfectly hardy, neither would they give satisfaction to the general planter who, as a rule, knows nothing of the care required to bring such plants to perfection, and thinks when he has set his shrubs in the ground that all has been done that is required for a suc-

cessful plantation, but is much surprised the next spring to find so many half dead plants, and often blames the nurseryman for selling him dead plants, when, in reality, the trouble is due to his own ignorance of what is hardy or tender. Many in planting new places procure catalogues and make out their lists from them, selecting all that is represented as most rare and showy, or they may have made their list from plants that they have seen in some exhibition, never thinking that they require any extraordinary care in situation or culture to produce such specimens as they have seen at the exhibitions. Now this is all a mistake, for many catalogues are deceptive, and the sooner nurserymen and others learn to send out correct catalogues the better it will be for all. Many planters, after buying these plants, which are not hardy under ordinary circumstances, become disgusted to see them growing less and less every year, and come to the conclusion that it is throwing away money to try to cultivate them, and that the general run of plantmen are dishonest, when such is not the case. The public want trustworthy information, and the catalogues of nurserymen and seedsmen are good places to give honest descriptions of plants, and if they have any weak points, to point them out, stating whether they need protection or a special situation, and in what way. This would not lessen the sale of this class of plants, and people would plant intelligently, knowing the places or positions where they would succeed. Most of those who have had anything to do with planting know that many of our choicest shrubs need special care and protection in this climate, and the essayist did not wish it to be thought that he did not advocate the planting of the class which are not perfectly hardy, for he did in their proper place. Many of them are so beautiful that they will well repay us for all the care and labor required to grow them successfully. But the object of this paper is to give the names of such as under ordinary conditions have stood the test of cold and heat, or as many of the best of them as there may be room for, and these will be ample to select from. Many of them are natives of our own woods and fields and compare well with their allies from other climes, whence we import them at so much cost. For many large as well as small places they can be used to great advantage, giving a finer general effect throughout the year than many of the exotics.

Before passing to the general list the essayist glanced over the field to see what we have in our own country. What he asked, can be more beautiful than the *Kalmia* (mountain laurel) clothing our hills from Maine to Georgia? or our swamps of *Rhododendron maximum*, or our mountains covered with *R. Catawbiense*? or our native azaleas, such as *calendulacea*, with flowers varying from yellow to flame color; *arborescens*, with its snowy white and pink flowers and scarlet stems; *viscosa*, which fills our swamps with its white fragrant flowers, or *nudiflora*, that grows so luxuriantly on some of our dry hillsides. Equally beautiful are our fields of *rhodora*, with its purple bloom; our *viburnums*, with their corymbs of pure white flowers in summer, followed in autumn by their many-colored fruits, from scarlet to purple, which in some species last well into winter, enlivening the season when nearly everything else is past.

Then there are our *cornuses*, with good flowers and blue and white berries and

many-colored woods, cheering even in winter; the wild roses that bloom from June to August; the sumacs, with their fine tropical foliage and brilliant colored seedheads; the wild plums, especially *maritima* and *pumila*; the many species of thorns which are beautiful both in flower and fruit; our spiræas, white and purple; the white fringe; the *clethra*, with its fragrant white flowers from July to September; the holly and the black alder, which are most beautiful, if fruiting specimens are selected, the fruit holding on well into the winter. Even now a specimen in the Arboretum is as brilliant with its scarlet fruit as in October. The ink berry is a fine evergreen shrub. Especially ornamental as under shrubs are the *halesia* (silver bell or snowdrop tree).

FAVOR CONSISTING OF A CALLA AND LILY
OF THE VALLEY

The *andromedas* and the huckleberries and blueberries are all useful, and nothing can excel their rich autumn coloring. The *shad* bush is almost the first shrub to blossom in our woods, and the *barberry*, with its fragrant yellow flowers and scarlet fruit, is very ornamental; and so are the wild honeysuckles, with scarlet and orange flowers. Other beautiful native shrubs are the various species of *philadelphus*, *potentilla*, *hypericum*, *rose acacia*, *elderberry*, *indigo shrubs*, *ampelopsis*, *bitter-sweet* and many others.

Mr. Dawson next gave a general list of hardy shrubs, beginning with the *clematis*, of which he named the following species: *Virginiana*, white, a climber; *Pitcheri*, dark purple, flowering all summer; *crispa*, pale blue, fragrant; *Verticillaris*, with large, pale purple flowers; *Vitalba*, the traveler's joy of the English, white; *graveolens*, yellow flowers in late autumn, the seed pods very showy; *Davidiana*, fine porcelain blue, fragrant flowers, resembling miniature hyacinths; *robusta*, white, one of the finest of the late blooming species. The varieties of *Jackmanni* and other garden varieties are too well known to need more than mention. *Nauthorhiza apifolia* is a beautiful low shrub, with chocolate colored flowers and fine autumn foliage. Most of the varieties of *Pæonia Moutan* are hardy, with fine, showy flowers. The

Calycanthus floridus and *laevigatus* (allspice bush) are desirable for their fragrance. *Schizandra Chinensis* is a fine climber, with fragrant flowers and scarlet fruit. Of the moonseed we have three species, *Menispermum Canadense*, *Dauricum* and *Japonicum*; they are good plants for covering posts or small arbors, the foliage being of a rich green. The *Akebia quinata* is also a fine vine for rockwork or trellises. Of the genus *Berberis*, the best are *B. Canadensis*, a native species; *B. vulgaris* and its varieties, with yellow, red, purple and white fruit; and the variety with purple foliage. *B. Thunbergii*, a fine, low growing species from Japan, is one of the best of all, being brilliant all winter. *B. Sieboldii*, known in gardens as *B. Hakodaka*, is also a good one. *Iberis coriacea* and *Alyssum Cneorum* are dwarf shrubs, with white and yellow flowers. *Hudsonia tomentosa* and *H. ericoides*, two native shrubs, when once established will grow in the most exposed places. *Hypericum kalmianum* and *H. prolificum*, from Lake Superior, and *H. aureum*, from Tennessee, are the best of the genus and bloom well during the latter part of the summer. *Actinidia polygama*, a strong rampant growing vine from Japan, has white flowers and light, green edible fruit about the size of a large grape. *Zanthoxylum Americanum* (the toothache tree), and *Ptelea trifoliata* have inconspicuous flowers, but grand foliage, and the fruit is somewhat ornamental.

Of the holly family, which are hardy, we have *Prinos verticillata* (black alder), with both red and yellow fruit, *Ilex laevigata* and *I. glabra* (ink berry), with black fruit and evergreen leaves; also *Nemopanthes Canadensis*, with rosy purple fruit. The species of *euonymus* are all ornamental in fruit, but their flowers are inconspicuous. *E. atropurpureus* is an American species, with rich scarlet fruit. *E. Americanus*, var. *obovatus*, is a low growing species, good for covering embankments or any other purpose where a low growing species is required. Of *E. Europæus* there are many varieties, with white, yellow, purple and scarlet fruits, all of which are highly ornamental in the fall. *E. verrucosus* is a small shrub with warty branches. *E. nanus* is an excellent plant, where a dwarf one is required; the autumn and winter foliage is of a rich brown, which makes it very effective for winter work. *E. alatus* is a fine variety from Japan, with winged bark. *E. radicans* and its variety are excellent for covering rocks or fences, clinging almost as well as ivy. Of the *biter-sweets*, *Celastrus scandens*, our native species, and *C. punctatus* and *C. paniculatus*, from Japan, are all rapid growing climbers, well suited to cover screens or unsightly buildings, and their orange and scarlet fruit is very ornamental in autumn.

Of the buckthorns, *Rhamnus alpinus* has the best foliage; *R. cathartica* is useful as a hedge plant, and *R. Frangula* is ornamental on account of its continuous blooming, which gives the plant a peculiar character, it being covered with flowers, green, red and black fruit during the summer. *Ceanothus ovalis*, from Vermont, is a neat low shrub, with white flowers in June; *C. Americanus* blooms a month later; both are valuable in dry soils.

The different species of wild grapes are of great value in covering up unsightly buildings or walls; *Vitis Labrusca*, *astivalis*, *cordifolia* and *riparia* are the most hardy. In the *ampelopsis* section we have *A. quinquefolia* and its varieties, one of which *A. Engelmanni*, has suck-

ing tendrils like *A. Veitchii*; *A. heterophylla* and its varieties, *aconitifolia* and *serjaniifolia* have blue berries.

Esculus macrostachya is a fine late flowering shrub, with spikes of white flowers. *Nanthoceras sorbifolia* is very curious in bloom, but short lived. All the species of this are fine for large clumps or embankments, and when cut within an inch or two of the ground every year make a very tropical appearance. *R. glabra*, var. *laciniata*, has fine fern-like foliage. *R. copallina* is one of the finest for autumn coloring. *R. vaukena* and *R. Toxicodendron* are well known as the poison sumach and poison ivy. *R. aromatica* is one of the finest coverings for banks; when once established it will grow in the poorest of soils. *R. Cotinus*, the smoke tree, is a well known shrub with mist-like flowers. *R. semialata Osbeckii* is a fine large growing shrub from China, with large heads of white flowers in late summer.

Of *Cytisus* we have *capitatus*, with round heads of yellow bloom, and *C. nigricans*, with long loose spikes of light lemon colored blossoms, which appear about the first of July. *C. elongatus biflorus* has round heads of flowers during the early summer. Of *amorpha* we have *frutescens* and its many varieties, all of which are coarse flowering shrubs with bluish purple flowers.

A. canescens, the lead plant, seldom exceeds two feet in height; it has spikes of very blue flowers and pretty foliage. The *wistarias* are all fine climbing plants, well adapted to all purposes that climbers are used for. Of these we have *Chinensis* and the variety *alba* and *flore pleno*, *brachybotrys* and *multijuga*. In *robinias* we have *R. viscosa*, the clammy locust, with pinkish white flowers in June, and *R. hispida*, the rose acacia, with long clusters of pink blossoms, which flower at intervals all summer. There are several varieties of this old-fashioned shrub, the difference being chiefly in the size of the flowers.

The *colutea* or bladder senna, is very ornamental, and if well pruned will continue in bloom most of the season; the seed pods are also very interesting. *C. arborescens* has dark brown and yellow flowers, and there are several varieties whose flowers vary from orange to pale lemon color. *Hamamelis virginica* is a neat shrub from Asiatic Russia, with clusters of purple flowers in June; it forms a handsome plant when grafted on *Caragana arborescens*. The *caraganas* are a very ornamental class of shrubs from China, Siberia and Dalmatia—all perfectly hardy and free flowering. The species are *arborescens* and its variety *pendula* and *arenaria*; all the varieties of *arborescens* attain a good size. *C. frutescens* and its variety *grandiflora* are medium sized shrubs, with bright yellow flowers. The low species are *C. Altagana*, *Cham-lagu*, *pygmaea* and *spinosa*. The last is well adapted for small hedges on account of its long, thorny branches. The dwarf and trailing species make nice heads when grafted high on *C. arborescens*.

In the plum family we have a large variety to choose from, all more or less beautiful, and many exceedingly handsome. The Kansas sand plum, said to be a variety of *Prunus angustifolia*, is a neat low shrub from two to four feet high, and is densely covered with white flowers in early spring, which are followed by yellow, red and nearly purple fruit in abundance. This species should attract the attention of our fruit growers, as it begins to bear when less than eighteen inches high. *P. emarginata* from California, is

very similar to our wild red cherry, *P. Pennsylvanica*, *P. Virginiana* and a variety with semi-double flowers are worth a place in the garden.

GREENHOUSE STOCK AND ROSES.

Villa Nova P. O., Delaware Co. Pa. Money Order Office: Bryn Mawr, Pa.

ROSES.

A FEW SPECIALTIES, AND OTHERS OF WHICH I HAVE A SURPLUS.

GLOIRE DE MARGOTTIN. The last seedling of the celebrated French grower. All the foreign journals speak highly of this rose. In color it is a brilliant crimson, and it is thought to be one that will excel as a pot rose for market purposes.

Price, 50 cents each; \$5.00 per dozen.

MRS. JOHN LAING. The best new pink Hybrid. A rose that will never be classed among the cheap grades, owing to the uncertainty of increase, except at certain seasons of the year. Very strong pot grown plants, from

6-in. pots, \$4.50 per doz.; \$35 per 100. 4-in. pots, \$3.50 per doz. \$25 per 100.

METEOR. 4-in. pots, \$3 per doz. **LA FRANCE.** 2 1/2-in. \$5; 3-in. \$7; 4 in. \$15 per 100

YE PRIMROSE DAVE One of the most prolific of roses, and unsurpassed for the florist having a home trade. 3 inch, \$1.25 per dozen.

GEN. JACQUEMINOT. 4 inch, fine plants, \$2.00 per dozen.

PAUL NEYRON. 4 inch, fine plants, \$2.00 per dozen.

Also an assortment of roses grown for the retail trade, both ever-blooming and hybrid. This is fine stock—from 2 to 3 ft.—was grown during the summer, wintered in cold houses, and is bound to satisfy purchasers. Can furnish a limited amount. My selection of varieties, at \$2.00 per dozen.

General assortment of roses, strong stock, from 2 1/2-inch pots, my selection of varieties, \$1.00 per hundred.

CANNAS. Ehemanni and Noutouii, 4-inch, \$2.00 per dozen.

Francis Morrell and Emile Leclair, 30 cents each.

TROPAEOLUM "DARKNESS." A very dark DOUBLE variety. Excellent as a market plant. Now is the time to obtain your stock for another season.

M. A. HUNT, Terre Haute, Ind.

ROSE, CLIMBING NIPHETOS.

CLIMBING

NIPHETOS

ROSE.

The Most Valuable Introduction Since Marechal Niel. A small plant in a pot exhibited before the Royal Horticultural Society in London bore forty-eight splendid blooms, and was awarded a First Class Certificate. It Flowers Very Freely, differing from those of old Niphotos from which it is a sport only in that they are of a purer white, not showing the pink tinge, and that they seem more delicately scented. **SHOOTS HAVE RUN UPWARDS OF TWENTY FEET IN ONE SEASON.** This variety blooms only from the lateral shoots while the main stem grows on with a most decidedly climbing habit. A valuable help to those who supply **CUT FLOWERS FOR MARKET.** To be distributed in the United States in May, 1889, by JAMES VICK, SEEDSMAN. Send for particulars to KEYNES, WILLIAMS & CO., Salisbury, England, or

JAMES VICK, SEEDSMAN, ROCHESTER, N. Y.

ROSES.

All the best NEW and Standard Varieties of
Teas, Hybrid Teas and Hybrid Remon-
tants, in extra fine plants,

New Pure White Tea Rose The "QUEEN."

This splendid new Rose originated with us two years ago, and having proved
valuable, is now placed on sale. It is

A PURE WHITE SPORT FROM SOUVENIR D'UN AMI.

A vigorous, healthy grower and continuous bloomer, producing a great abundance
of Buds and Flowers all through the season. Flowers are **PURE WHITE**, show-
ing no trace of Pink, makes good finely formed Buds and is moderately full.
Petals are thick and of good substance, opens well, is a good keeper and very sweet.
We believe it will prove especially **VALUABLE FOR EARLY WINTER FORC-**
ING AS WELL AS FOR OPEN GROUND PLANTING, and recommend it
for extended trial with the belief that it will be found a valuable acquisition to our
list of Pure White Tea Roses.

PRICE: Strong well matured plants from 2½-inch pots, \$3.50 per doz.; \$25.00
per hundred. Two year plants from 5-inch pots, \$9.00 per dozen.

VERY CHOICE YOUNG STOCK

— FROM —

DUNDEE LAKE ROSERIES.

Having finally decided not to build any new rose houses this year, I am now able
to offer the 10,000 very choice young plants I had prepared for the contemplated new
houses. Every cutting for this stock was made under the conviction that the result-
ing plant would be flowered on my own benches. Only carefully selected wood from
healthy, vigorous plants has been used for cuttings.

To parties wanting any of the following kinds, I shall be pleased to quote prices,
on either large or small orders:

<i>American Beauty,</i>	<i>La France,</i>	<i>Madame de Watteville,</i>
<i>Catherine Mermet,</i>	<i>Bon Silene,</i>	<i>Souvenir d'un Ami,</i>
<i>The Bride,</i>	<i>Perle des Jardins,</i>	<i>Papa Gontier.</i>

My place is near stations on **THREE** Railroads, viz: New York, Lake Erie &
Western; Delaware, Lackawanna & Western, and New York, Susquehanna & West-
ern, to either of which stock will be delivered, free on board cars. I shall be glad to
have intending purchasers inspect my stock before placing orders. My nearest
station is Clifton, on N. Y., L. E. & W. R. R.

S. C. NASH,

Clifton, Passaic Co., N. J.

NEW PEDIGREE ROSES FOR 1889.

CLEOPATRA, Tea; first class certificate Royal Horticultural Society.

DULCE BELLA, Tea. MAID OF THE MIST, Hybrid Tea; a white sport
from Lady Mary Fitzwilliam.

MINUTIFOLIA ALBA, Polyantha; first class certificate Royal Horticul-
tural Society; first class certificate Royal Botanic Society.

Grafted plants ready in May. Descriptive Price List will be mailed to all corres-
pondents free on application.

H. BENNETT, Pedigree Rose Nursery,
SHEPPERTON, MIDDLESEX, ENGLAND.

ROSES. ROSES.

We have a very fine stock of Roses in four and five inch pots suitable for
forcing, consisting of **BON SILENE, BRIDE, LA FRANCE, MALMAISON,**
MERMET, NIPHETOS, PAPA GONTIER, PERLES, SAFRANO, SUNSET, and
many other choice varieties. PRICE, \$10.00 to \$12.00 per hundred.

ELLWANGER & BARRY,
MOUNT HOPE NURSERIES. ROCHESTER, N. Y.

News Notes.

DENVER, COL.—Edward Coldrick has built three houses 64x12, heated by steam.

POTTSVILLE, PA.—Mr. Alexander Madison, of the firm of J. M. Madison & Co., florists here, was married April 20 to Miss Phoebe Sinton.

NEW YORK—Never was there more favorable weather nor a better display of first class stock than this Easter. Business was simply immense and the florists are all happy.

BURLINGTON, N. J.—Lewis R. Hancock has recently put in a 50 horse-power boiler for steam heating, throwing out several hot water boilers and several thousand feet of pipe.

SPRINGFIELD, O.—Mr. E. G. Gillett, secretary of the Springfield Seed Co., was recently married to Miss Ohmer, daughter of Mr. N. Ohmer, the well known nurseryman of Dayton, O.

SADDLE RIVER, N. J.—John G. Esler, secretary of the "Florists' Hail Association," has been elected president of the "Orvil Building and Loan Association" by his friends and neighbors.

BRISTOL, PA.—DeWitt Bros. forced a 20x100 foot house of Jacqs for Easter with very gratifying success. Harry Chambers is erecting a rose house 70x50, using the clear cypress stock now so popular.

WORCESTER, MASS.—A leading dry goods store on April 9 presented each lady customer with a rose as an Easter offering. Over 7,000 roses were given away. It was probably a very effective manner of advertising.

GERMANTOWN, PA.—At the last meeting of the Germantown Hort. Society it was announced that premiums aggregating \$300 will be offered at the chrysanthemum show to be held next November in St. Vincent's Hall.

MINNEAPOLIS—The Minneapolis Florist Club held its regular monthly meeting April 8. It was a well attended and interesting meeting. The membership is increasing and a very friendly feeling exists amongst the craft here.

WASHINGTON, D. C.—The congregation of one of the churches recently presented to their pastor on the twenty-fifth anniversary of his pastorate a bouquet of twenty-five lilies, each of which contained a five dollar gold piece.

DETROIT.—The total attendance at the recent flower show during the five days was about 34,500 and the total receipts at the door amounted to \$7,478.21. Mr. W. H. Brearley who so successfully managed the affair has in contemplation a combined flower show and musical festival for next year.

MILWAUKEE.—Clark Bros., florists, at corner of 15th avenue and Pierce street, suffered a loss of \$758 by fire and smoke the morning of April 3. The loss—which was almost entirely in injury to plants from smoke—was fully covered by insurance. The fire started in the furnace pit—presumably starting in some way from the fire under the boiler.

TRENTON, N. J.—C. Ribbam & Sons will this season add four large houses to their already extensive plant. George Wainright, the originator of the Dinsmore rose, has several fine specimen plants of *Cornelia Cook* and *M. Niel*

roses. A *Cornelia Cook* "tree" about 8 years old has this season borne some of the finest specimen blooms ever seen here.

PITTSBURG.—Theodore Beckert, the florist, was married last week. L. Neff has opened a florist store on Butler street. Easter trade was immense. The stores and market stands could hardly handle the trade. Flowers were plentiful, especially *Lily Harrisii* and valley, and brought fair prices. The sales were principally of loose flowers for church decorations. Plants also sold well.

PORTLAND, OREGON.—A bill was passed at the last session of the legislature creating a state board of horticulture. It divided the state into five horticultural districts, and provided that the governor should appoint one suitable person from each district and one from the state at large. The governor made the appointments and April 9 the members met and effected an organization. The office and headquarters of the board were established at 171 Second street, this city.

READING, PA.—Hoskins & Giles have built a novel hot water heater. It is in the shape of a coil of 2-inch pipe surrounding the fire box. It is giving entire satisfaction. D. H. Strickler is constructing two rose houses 23x60, two carnation houses 18x60, and an office 12x15 with cellar for cut flowers. J. B. Moore has built two rose houses 106x20, three carnation houses 56x18, three general plant houses 56x11, and an office 44x18. The place is heated by two 20-horse power steam boilers.

KANSAS CITY.—Florist C. E. Hampton had a peculiar experience recently. His gardens at Heathwood were visited in his absence by a number of women who carried off some \$300 worth of plants and shrubs. It was given out by one of the women in the neighborhood, so the story goes, that the gardens were to be destroyed and the land graded down for buildings, and that every woman should help herself. Mr. Hampton went out to his gardens afterward accompanied by a policeman, and within an hour he had visited a number of houses and taken an inventory of the flowers and shrubbery that had been taken. In almost every case the women offered to pay their portion of the damage.

Notes From Mr. John Thorpe's Place, Pearl River, N. Y.

ALTHOUGH so busily occupied growing cut flowers for the New York market he can not let hybridizing alone, and I am glad of it. A lot of tiny pedigree roses in little pots are plunged in ashes in shallow boxes and held up to the light; carnations have got strings and labels tied around their stems, showing that they have been operated on; and the marks on a lot of *Primula obconica* in a corner indicate that they have been hybridized with pollen of *P. sinensis*.

CYCLAMENS receive marked attention. He grows a very select strain of the plain persicum and not the giganteum section. Plants raised from seed sown last February have realized him \$4 a dozen this winter, but of course they had to be good plants and with lots of blossoms.

GLADIOLUSES occupy every available nook and corner, and border the peach tree bed, also are interplanted among the carnations. Shakespeare, Eugene, Scribe and Brenchleyensis comprise the bulk of them.

A ROW OF lilacs out of doors has been very badly infested with scale insects. Last year he syringed some of them with crude oil with the result that the shrubs are yet alive and clean and the scales dead. I should have thought crude oil unadulterated would as soon kill the lilacs as the scale, but Mr. T. says no.

THE SNOWBALL shrub has been used in large quantity in 7-inch pots as a pot plant. The variety is the sterile form of *Viburnum opulus*, and with very little forcing came into capital bloom in February.

FOR propagating purposes Mr. Thorpe believes in bottom heat, and so do I, no matter be it for cuttings or seedlings.

IN THE case of cinerarias and in fact we might say of most plants Mr. T. thinks we hardly give weight enough to selection; if we were very painstaking in our selection, choosing the fine bright flower and the broad full head and compact leafy habit, we would not year after year be growing so many inferior varieties.

TOMATOES RUN up on strings occupy the dark corners in which sun-loving plants feel so uneasy, also the warm places near the boilers.

ALTHOUGH NOT attacked by the orchid fever, a good many orchids appear in some of the houses and several *oncidiums* are in bloom.

DOUBLE HARDY PRIMROSES.—He has a fine set of these and is carrying them on as pot plants. They are exquisite little gems, somewhat hard to manage, but of tractable cultivation in a cold frame. Of course for his purpose—selling the plants in pots and in bloom—he has got to grow them in pots.

ONE LARGE house is devoted to peach trees. The varieties include Amsden, Hale's, Alexander, Rivers' and Crawford's Early. The trees are on peach roots and grown in 5 feet long boxes, which are about 9x10 inches, four trees in a row in each box. The fruit is now swelling and near the stoning period. "There is no trouble at all in setting the fruit," Mr. Thorpe says, "indeed so freely did they set that we have had to thin them out a good deal." W. F.

OBITUARY.

ROBERT HALLIDAY—father of R. J. Halliday—died at his home in Baltimore on Monday last, in the seventy-seventh year of his age. Mr. Halliday came to this country from Scotland when quite a young man. In 1837 he commenced business for himself as a florist, and continued to the last actively engaged in it. Thoroughly in love with his calling, his indomitable energy and perseverance enabled him to overcome every obstacle and to build up one of the most solid business concerns in the country, winning for himself at the same time a national reputation as an authority on horticultural matters. He was a man of splendid physique and possessing remarkable personal magnetism; those acquainted with him found him a pleasant companion, honest, straightforward and true as steel to the right. His friends were legion. The funeral took place to-day, April 17, and was largely attended by friends from near and far, who came to pay their last tribute of respect to one of Nature's noblemen. A. W. M.

MADAME SISLEY, wife of our friend and correspondent M. Jean Sisley, died at her home in Lyon, France, April 3, in the 79th year of her age. The many friends of M. Sisley in America will hear with sorrow of his affliction.

The Seed Trade.

SEED TRADE ASSOCIATION.—Geo. S. Haskell, Rockford, Ill., president; Albert M. McCullough, Cincinnati, secretary.

EASTERN REPORTS on the seed trade say fair trade for March and April thus far, though not equal in all to last season to even date. A surplus on hand of some sorts of onions, peas and late sweet corn.

NEW YORK.—The Seedsmen's League have commenced suit against the A. B. Cleveland Co. for \$14,000. James Howard, book-keeper for the A. B. Cleveland Co., has also brought suit against the same company for breach of contract—and against J. M. Hard, one of the largest stockholders, for libel and slander. Mr. Staples, of Merchants Hotel, Washington, D. C., is reported to have withdrawn from his directorship in the A. B. Cleveland Co. It is also reported that H. K. Thurber has withdrawn.

INDIANAPOLIS.—In the case of J. A. Everitt, April 1st, charged before U. S. Commissioner Van Buren with having violated the postal laws, the court found that the only cause of complaint that might arise against the defendant (and the law covering which is not clear) is in the use of federal mail sacks for transporting his mail to and from Brightwood. The charge that he used cancelled stamps was found to be without foundation. It would thus seem that the arrest of Mr. Everitt by the postal authorities might have been caused as he complains, by spite work on the part of the postoffice officials there who were given too much work by Mr. Everitt.

WASHINGTON.—By decision of the Supreme Court April 15, "The Court held that although beans are often planted as seeds, yet as a commodity in the market they are no more to be denominated as garden seeds than potatoes, which are also sometimes planted. The Court says the Circuit Court erred in not allowing the defendant to prove the common designation of beans as an article of food, and in charging the jury that the commercial designation of the article had nothing to do with the question. The commercial designation of the article it holds is the first and most important thing to be ascertained in settling the meaning of the tariff laws. The decision of the Circuit Court that beans should be admitted free of duty as seeds, is therefore reversed." It would thus seem that beans imported for that purpose should be assessed a duty of 10 per cent.

Failure of George S. Haskell & Co.

The associated press dispatches of April 16 contained the surprising and important news to the seed trade that George S. Haskell & Co., of Rockford, Ill., had failed for about \$100,000. Later particulars would indicate that the immediate cause was the A. B. Cleveland Co. trouble, but there was a second and greater reason—in unsatisfactory investments by Mr. Haskell in the Hudson Mining and Milling Co., of Silver Cliff, Colorado.

The total assets are estimated at about \$50,000, being the business block in Rockford valued at \$20,000, stock of seeds on hand, \$22,000, and a large amount of stock in the mining company. The liabilities are estimated at about \$75,000 to \$80,000, consisting in part of \$6,600 due banks in Chicago and New York, \$7,000 due the North Western Insurance Co.,

Milwaukee, \$17,000 due local banks and friends at Rockford. This in addition to paper on which Mr. Haskell is liable as endorser held by the A. B. Cleveland Co. for unknown amounts. It seems the A. B. Cleveland Co. promised to take care of all paper endorsed by Mr. Haskell at New York, but failed to do so. This was the direct cause of closing his doors. Mr. Haskell's residence (a valuable one) was owned by money belonging to his wife and is not included in the business failure.

Mr. Haskell was deeply affected by his misfortunes and has much sympathy from all his friends at Rockford, as well as among the trade. The *Star* says:

"A man of scrupulous honesty, enterprising, generous to a fault, a good citizen and true friend, no man in Rockford will receive greater sympathy in his hard luck than Geo. S. Haskell. He is widely known throughout the state and land. For years associated with the state board of agriculture, he was recently elected president of the board. Prominent in Masonic and Elk circles, popular in politics and society, his financial difficulties will be widely regretted and some sort of compromise earnestly hoped for."

ROSES.

PAUL BUTZ & SON,
Lock Box 97, NEW CASTLE, PENNA.

HUGHES' SOLUBLE FIR TREE OIL. FLORISTS AND NURSERYMEN SHOULD NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants: such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

FORCING BULBS

FOR

Fall Delivery.

NARCISSUS

AND OTHER

POPULAR BULBS

FOR SPRING FORCING.

Special Prices upon Application.

Narcissus Albicans, large creamy white trumpets; one of the best.

Narcissus Bicolor Empress, the Queen of the bicolors, immense trumpets, a great favorite.

Narcissus Bicolor Grandis, similar in color to Horsfieldi; but with stouter flowers and much later.

Narcissus Bicolor Horsfieldi, a great beauty and fine for cutting.

Narcissus Bulbocodium, "Yellow Hoop Petticoat," fine strong bulbs for forcing.

Narcissus Bulbocodium Citrinus, pale sulphur flowers, and very early.

Narcissus Emmeror, the largest; immense stouter flowers of a rich yellow.

Narcissus Golden Spur, immense deep golden yellow flowers, and wonderfully early.

Narcissus Henry Irving, rich yellow, large bold trumpets.

Narcissus Incomparabilis Cynosure, a beautiful single incomparabilis for cutting, yellow cup, divisions creamy white.

Narcissus Incomparabilis Stella, large single white variety, very early, fine for cutting.

Narcissus Major, true, one of the best forcing sorts, large yellow trumpets, similar to maximum.

Narcissus Nobilis, a first class variety for florists, free and early.

Narcissus Obvallaris, the true Tenby daffodil, one of the best varieties, forcing deep rich yellow flowers of great substance.

Narcissus Odorus Campenelle, the well known Campenelle Jonquil, very strong bulbs.

Narcissus Orange Phoenix, large double white flowers with orange center, good for cutting.

Narcissus Pallidus Præcox, the earliest of all, forces very freely, single, sulphur colored trumpets.

Narcissus Rugilobus, true, large yellow trumpet, very free and very early.

Narcissus Scoticus, the Scotch Garland daffodil, a beautiful variety both for borders and for forcing.

Narcissus Von Sion, true, the double deep yellow daffodil.

Freesia Relecta Alba, large bulbs for forcing.

Freesia Leichtlini, a nice contrast to preceding and forces well.

Gladiolus The Bride, flower pure white, fine for forcing.

Helleborus or **Xmas Roses** in great variety, and extra fine flowering clumps for forcing, can be supplied early in fall.

And many other first class sorts. List of varieties and price I should be happy to furnish upon application.

ADDRESS

R. S. BROWN & SON,

Box 99, KANSAS CITY, MO.

Marechal Niel Budded on Gen. Jacqueminot.

Several years ago I budded the N'el on a pot grown Jacq and so long as the plant was kept in a pot its progress was very slow, but when planted in a permanent bed in the greenhouse it soon began to grow and made a straight shoot of thirty feet inside of eight weeks. At that time it showed no signs of any laterals, but when cut back to about twenty feet it branched. It is in an azalea house and is consequently kept very cool during the winter months and would perhaps do better in a warmer situation. I have cut from this plant fifty-five flowers since Christmas and at the present time there are seventy-five buds and more coming.

Pittsburg. GEO. DOERR.

Forcing Bulbs for Fall Delivery

If you will make up a list of your wants and send us now, we will book same at importation rates. We are now making up our regular commissions to our growers in France, Germany and Holland, and will take your orders—large or small—at a slight percentage over cost if you will club with us to save freight, etc. REMEMBER, we handle no second grade bulbs. Our experience of many years in importing bulbs, enabling us to procure the very best quality at the lowest prices. If you intend to avail yourself of this opportunity, write us at once, giving varieties and quantities and we will furnish an estimate by return mail. We handle the following varieties in quantity—all splendid forcers:

Lilium Harrisii, first class, 5 to 7-inch, extra, 7 to 9 inch.
 " Candidum, best North of France grown
 " Longiflorum, Bermuda grown, 5 to 7-in.
 Roman Hyacinths, White, extra, 11 to 15 centimetres
 Roman Hyacinths, Pink, extra, 11 to 15 cent.
 Paper White Narcissus, extra.
 Double Yellow Narcissus, Von Zion.
 Trumpet Major Narcissus, true.
 Freesia Refracta Alba, first size, extra large.
 Tulips, La Reine, white.
 " Belle Alliance, scarlet.
 " Yellow, yellow.
 " Kaiser Kroon, crimson, yellow edge.
 " Cottage Maid, pink and white.
 " Van Thol, scarlet.
 " Double Duke of York, rose and white
 " Princess Alexandra, red and yellow.
 " Emperor Ruborum, scar.
 [The three last named are splendid forcing vars.]
 Lily of the Valley, best Hamburg pips.
 Spirea Japonica, fine clumps.

The Tulip Trade.

There has undoubtedly been a heavy falling off in the demand for cut tulips the past season. Last year, and more especially the year before last, this flower was extremely popular for dinner decorations, but this season that demand has been greatly reduced.

Reports from New York, Philadelphia and other large centers indicate a similar experience there, and it begins to look as if this useful flower was for some reason losing its popularity.

In view of this tendency it is rather interesting to notice that the price lists received from Holland indicate a considerable advance in quotations on this class of bulbs there. The cause of this advance I know not, but if, as is possible, the bulb growers are basing their calculations on the heretofore large consumption in this country, they may find themselves mistaken. An increased price on tulip bulbs will be apt to still further reduce their consumption as the margin of profit on them for the flower grower is even at the old prices infinitesimal.

I think it would be of interest to the trade in general to hear from other quarters on this subject.

Boston.

SOUVENIR DE WOOTTON

WE SHALL KEEP OUR ORDER BOOK
OPEN FOR JUNE AND JULY.

Don't miss getting a hundred plants or more. We shall advertise the Cut Roses of WOOTTON, commencing in November, in all the leading newspapers, etc. in the United States. The demand for the flowers will be large. It has already been favorably noticed at the White House, and in Washington society circles. Philadelphia rallies at the cry of Wootton; and Mrs. Childs' rose will be the fashion for the winter of 1889-90. Large growers make a mistake in not growing a house of it.

Prices as before advertised. Plants in good condition delivered in June and July,

By **C. STRAUSS & CO.** P. O. Box 422 **WASHINGTON, D. C.**
Also for Sale by
JOHN COOK, 318 N. CHARLES STREET, BALTIMORE, MD.

MESSRS. STRAUSS & CO. still have for sale a good stock of young plants of all the leading Roses for commercial growers.

Trade offer of Irish grown Daffodils to June.

Variegated Plants From Seed.

A seed firm writes me: "One of our customers has written to us for seed of variegated leaved thyme; he wishes to use the plant as an edging."

When the variegation is a specific character of the plant as we find it in amaranthuses we can reasonably hope that the seedlings shall resemble the parents, but when the variegation is the result of artificial cultivation, as in the case of the variegated-leaved thymes, seeds saved from these variegated plants seldom produce variegated plants, but almost always typical green leaved ones. It sometimes happens that variegated plants have a tendency to produce variegated issue just as the seed of some double flowers have a tendency to produce double flowers; a case in point is Lavatera arborea variegata, or the variegated-leaved beets, but this tendency almost always runs in annuals and biennials, plants that are not readily propagated by other means than from seed. Seed of the fancy-leaved coleuses always produce variegated forms, but we never can depend upon these as resembling the parent. Crotons, dracaenas and spotted leaved caladiums, if species, may produce seedlings resembling the parents, but if they are intermixed by hybridization we know not what we may get from seed.

Therefore, if you wish to increase your stock of variegated plants, especially those of perennial nature, be they hardy or tender, do it by means of cuttings, layers, grafts, division or other simple means, and not by seeds. This is the course, too, that nurserymen pursue in the case of variegated-leaved trees and shrubs.

Pansies that are Pansies

BUGNOT'S AND CASSIER'S EXCELSIOR STRAIN.

At a trial of all the leading strains obtained direct from the introducers, and planted side by side, by Mr. Denys Zirngiebel, in his large trial house (150 x 15 ft.), which he had erected expressly for Pansies, these were PRE-EMINENTLY SUPERIOR to anything in the house; the colors were SIMPLY ASTONISHING, BEING ALL THAT ARE KNOWN TO THE SPECIES, AMONG WHICH A WELL-DEFINED, CLEAR RED MARKING WAS STRIKINGLY PROMINENT; for COLOR, SIZE AND SUBSTANCE they were FAR AHEAD OF ANYTHING EVER SEEN IN THIS COUNTRY. Cut blooms were sent to LEADING HORTICULTURAL PUBLICATIONS and to CONNOISSEURS of this flower, and their PRAISES ARE LEGION FIRST PRIZE WAS A CERTAINTY AT ALL EXHIBITIONS WHERE SHOWN.

We contracted with Mr. Zirngiebel to save the seed of these strains, and we have the entire stock.

For anyone who wants a Pansy to compete against all comers, this is the one.

In packets of 100 seeds each, 50 cts. 1000 seeds, \$1.00.

Pitcher & Manda.

HAMMOND'S SLUG SHOT

Is an insecticide for general purposes. After ten years' use it can safely be said it is not equalled by any article or preparation for either efficiency, safety or economy. Kills Potato Bugs safely and speedily. Kills Worms on both Gooseberry and Currant bushes—it is cheaper than Hellebore and safe. Slug Shot kills the Slugs and Lice on Roses and other flowers—does it better than Tobacco or Sulphur and is cheaper. Kills the Flying Insects that devour Turnips, Radishes, Young Cabbage plants and such like vegetables. Slug Shot will protect Cucumbers, Melons, Squash, &c., &c., far better than lime, tobacco dust or anything else you can get. Slug Shot kills Cabbage Worms, also those on Tomatoes, Tobacco, Cotton and prevents damage by Curculio. For full information send for pamphlet, "Fighting Insects in the Garden." To Fishkill-on-the-Hudson, N. Y.

SCROFULARIA

Routes Carpet Bugs. A compound powder effective against Moth, Roaches, Bed Bugs, etc. After two years' use, so far as we can learn, wherever used against the larva of the the CARPET BEETLE or so-called BUFFALO MOTH, NO DAMAGE has come to either carpets, furs or woollens.

Put up in Packages retailing for 25 cents, 50 cents, and \$1.00 each.

THRIP JUICE

Kills Scale Insects, Mealy Bugs, Caterpillars, &c., diluted makes the cheapest reliable insecticide known, try it, 1/2 pint to barrel.

GRAPE DUST

Called by users "THE GREAT MILDEW DESTROYER," a fungicide for MILDEW AND ROT either indoors or out on Roses, Grapes, Gooseberries, Potatoes, Pinks, Pears, etc. Put up in Packages of 5 and 10 lbs.; in Barrels, Kegs; in bulk 100 lbs.; Barrel 200 lbs.

For sample or pamphlet address, **SLUG SHOT, Fishkill-on-the-Hudson, N. Y.**

Floral Arrangements.

Do not forget that the prime requisite in floral arrangements of any kind is grace. No matter how fine the individual flowers and how harmonious the colors, if the arrangement is stiff and formal it will offend the eye of discriminating patrons. Popular taste is rapidly improving in this respect and loose graceful arrangements must be supplied to meet the popular demand. Let the florist be the last one to retard this most desirable change.

A Florist Recovers Damages.

Judge Montgomery closed his labors yesterday afternoon in the criminal court, which has recently been engaged in the trial of civil business, and for three days past in the trial of the case of Edward McQueeney against James Donald Cameron and others. The plaintiff lived and conducted business as a florist on Boundary street, opposite the head of Eighteenth street, and claims that the defendants in grading property north of plaintiff's did it in such a manner as to cause the water, which it is claimed formerly flowed into a ravine, to be diverted on his premises, extinguishing the fires by which the greenhouses were heated, and causing a destruction of his property, for which he claimed \$7,500 damages.

The defendants claimed that they were not responsible, but that the diversion of the flow of water was caused by a bank of earth thrown up from the Champlain avenue shaft, and that the sewer constructed by the government not having been of sufficient capacity, the overflow was caused by that fact.

The court briefly instructed the jury as to the law in the case, and they retired about 4 o'clock. A verdict for \$2,000 for the plaintiff was found.—*Washington Press, April 7.*

THE S. A. F. COMMITTEE ON NOMENCLATURE meets at New York on the 15th inst.

THE EASTER TRADE.—Later reports confirm the earlier ones noted in last issue, and show that the Easter trade of 1889 has at nearly all points been much larger than ever before. While prices were a trifle lower than last year at many points, the supply was large and total receipts considerably in excess. And this is certainly a very satisfactory state of affairs. A good supply, all sold at fair prices is much better for all concerned than a smaller supply sold at higher prices. The weather undoubtedly had much to do with the large supply, but growers are also making progress in the manipulation of their plants to bring their crops in at the desired time.

NOW COMES THE RUSH of spring plant trade. Are you prepared for it? Are your plants equal in quality to the best in the market? If they are you won't have much trouble in selling them at fair prices, but if they are poor in quality you may have to work hard to dispose of them at remunerative figures, and if there have been more plants grown than required to supply the demand the ones left over will not be those of good quality, but the poorest. And now comes the time for you to show your business ability. After the plants are well grown they must be well sold. If the former is well done the latter is easier, but even with the best stock much depends on the manner in which it is placed on the market. Now is the time your show house should present its most attractive appearance. Customers will leave an order far more quickly if your stock and houses present an attractive appearance than if all cluttered up and disagreeable to get around. Keep your stock looking its best. Fill up the holes in the benches as fast as possible. Concentrate small lots of every kind of plant you sell into one house, so that customers may select if desired without trotting all over the place. Such a house is also of great value in selling small lots from. It saves much time in running around when every moment is valuable to you. And above all keep your walks clear of empty pots, boxes and similar truck, and cleanly swept every day. Don't neglect these little points now.

New York Notes and Comments.

The past Easter may be considered thoroughly satisfactory by the florists, for although prices were lower than previous years the demand was large, and the quantity of flowers handled very much greater than former years. The glorious weather naturally added to the demand, for the general public does not buy flowers in stormy weather, and certainly the use of Easter flowers, both in churches and in the home, increases every year. The lateness of the season caused the crop to be very large—many of the commission men thought they would be swamped, but a comparatively small percentage remained unsold. Lilies were plentiful, but sold well; the demand for them in pots was very large. Tulips and other small bulbs, barring lily of the valley, were scarcer than they had been. Among roses, the finest in the market were Paul Neyron—Wiegand, of Union Hill, is sending in remarkably fine ones. They were usually bringing 40 cents, but Wiegand's extras brought 60 cents.

No noticeable increase in the demand for any one flower was seen, but it is a conspicuous fact that loose flowers were way ahead of baskets for gifts. The demand for loose flowers, in place of any

design or basket, seems to increase all the time, and it is especially noted at any holiday season.

A great many pot plants were sold—to rich and poor alike; this is another largely increasing branch of trade. Lilies certainly led as pot plants, but a great quantity of azaleas, hydrangeas, rhododendrons and genistas were sold, as well as humbler bedding plants. The hydrangeas were, as a rule, remarkably fine and sold well. The quantity of Otaksa in the market was very largely in advance of Thomas Hogg; comparatively little of the latter variety being forced. The chief reason for this, no doubt, is that the blooms and trusses are rarely so large in Hogg as Otaksa, rather than through any other cause. White flowers are usually most in demand at this season, but the delicate tints of the last named hydrangea seem to rank equally with the white of Hogg.

The church decorations consisted more of plants than flowers, and while there was no startling novelty in this line the decorations were usually very elaborate. They consisted almost entirely of flowering plants, azaleas, hydrangeas, genista and lilies backed with palms. A great quantity of the large genista plants were used. An increase in decoration was noted among the churches which usually avoid any great display; instead of being confined to the Episcopal and Roman Catholic churches, as formerly, every denomination now makes some display in Easter decoration. Good flowers were imperatively demanded; but the market for flowers is certainly increasing, or the commission men would not have sold the immense stock thrown on their hands Easter week.

If the Easter trade was brisk, Centennial week was certainly the opposite. During that week New York didn't seem to care whether school kept or not, and the bottom fell out of the flower market. The immense crowd of strangers were not flower-buying people, and the native population was too much demoralized to care for such things, so most of the florists say they might have just as well shut up shop during the festivities. The great ball and banquet called forth some fine decoration by Klunder; for the first it consisted almost entirely of flowering plants, backed by palms. The decorations for the banquet consisted chiefly of baskets of flowers.

The flower trade was represented in the grand civic parade at Centennial by Siebrecht & Wadley, who had a beautifully decorated vehicle, representing Flora's Car. It was a very large truck drawn by four white horses. Each horse was attended by a man on foot leading it with a rope of roses. The harness was trimmed with mimosa, and each horse wore a green saddle cloth trimmed with flowers. In the front of the vehicle was

the Goddess Flora, her arm resting on a huge cornucopia filled with choice roses. Behind her was a superb specimen thrinax, and on either side of this a huge tree fern. Wires extending from one tree to another were hung with orchids. In the center was a formal little bed of cacti; on either side were banks of palms and flowering plants. A Japanese stood in the rear grafting a camellia; an Indian was standing on the other side holding an orchid. Two girls in fancy costume sat in the wagon holding huge bouquets and baskets of loose flowers, which they threw out into the crowd. The vehicle was escorted by marching spearmen and outriders. When it reached the Presidential stand the Japanese nimbly descended and presented Flora's cornucopia to the Chief Magistrate. This arrangement was one of the most beautiful and artistic displays in the procession and received much admiration, which it thoroughly deserved. However, these Centennial festivities crippled business for the florists and for many others, so that a good many are glad to see them over.

Trade generally is good so far and promises well, though the flower trade will soon settle down considerably.

EMILY LOUISE TAPLIN.

New York.

The floral decorations at the Metropolitan Opera House for the Centennial ball and banquet were on a scale of magnificence to accord with the occasion.

The lobby walls were all clothed with Irish juniper, arbor vitae and other evergreen trees; these formed a fine background of irregular outlines for immense groups of hydrangeas, *Lilium Harrisii* and azaleas, the margin of each group being *Astilbe* (*Spiraea*) *Japonica*. Some of these groups were eight feet high and broad in proportion.

The walls of the corridor leading to the main floor were completely hidden with laurel branches. The face of the wall above and immediately before the entrance to the main floor, on a background of laurel 25x15 feet, had to the left figures 20 inches deep of immortelles "1789" and to the right "1889." Between these a large cornucopia of *Mermet* roses showered down its contents. A large globe of *Mermets* was also suspended from the ceiling, supported on four sides with wreaths of laurel.

On the first floor leading to the boxes the stairways were walled with laurel and on the landing were groups of white azaleas and hydrangeas.

The ladies' reception rooms on this occasion were made the entrance to the supper rooms and were beautifully decorated. Here again junipers, arbor vitae and laurels formed the background for the plants. There were two groups of palms, two groups each of hydrangeas, lilies and azaleas, three groups the center of each being three very large old box trees around which were broad bands of *Astilbe* (*Spiraea*) *Japonica* margined with broad bands of scarlet geraniums. The balustrades above the entrances were crowned with a dozen fine palms, in the passageway leading to the supper room were beds of *Mme. Plantier* roses and red and blue *cinerarias*.

The decorations of the supper tables were entirely of plants arranged in circular baskets one foot in diameter, the baskets were of gilt wicker work, the plants being dwarf hydrangeas, *astilbe*, azaleas, geraniums, *mignonette*, *heliotrope* and ferns.

The main floor for the ball had eight

immense groups arranged, two on the front of the proscenium being *geuistas* ten feet high, two on the back of the proscenium of hydrangeas; at the extreme back of the stage was built nine boxes, the front representing the White House, the President occupying the central box. To the right and left of the stage and flanking the walls were two separated groups on each side of red azaleas and hydrangeas, one group being surmounted with a fine plant of *Rhapis flabelliformis*. The whole of the house was most effectively draped with flags and bunting in addition to the plants.

For the banquet all of the plants on the main floor were removed, to make room for the tables, the decorations of which were simple and beautiful; 200 baskets one foot in diameter were filled with the same kind of plants as for the supper table, in addition to these were 150 plaques of cut flowers of roses, gladioli, forget-me-not and carnations; large heads of hydrangeas were laid on the cloth, in these were placed red roses, 500 heads of hydrangea being used; *Souvenir*, *Niphetos* and *Bon Silene* roses were laid in and out among the glasses on the table, so as to represent a continuous chain; here and there were large groups of lilies and hydrangeas in pots. On the President's table were two large plaques of *Mabel Morrison* and *Puritan* roses, the center of the table being a mirror oval in outline, around the margin of which was a band of blue forget-me-not, violets, scarlet geraniums, lily of the valley and narcissus.

To crown all a flock of one hundred white pigeons were suspended as if in flight from the White House at the back of the stage, the leader with a laurel wreath being immediately over the President's table as if to alight on his head. From the wreath were two streamers of red, white and blue ribbon looped back to two of the pigeons at the broadest point of the flock; this was a beautiful conception and ably carried out.

The decorations were of Klunder's best.

JOHN THORPE.

Boston.

The very early season has had somewhat of a depressing effect on prices of cut flowers and on trade in general. The shipping trade has slackened up earlier than usual, and there is a full stock of almost everything needed for the local market. Roses especially are abundant. Tulips are in full bloom outside, and lily of the valley will also be in bloom in a few days. The indications now are that the outdoor flowers we have been accustomed to depend upon for Decoration Day will be all past at that time. Whether there will be a good supply of other things to take their place is somewhat doubtful.

The street peddlers have been in trouble again, a large number of them having been arrested and fined for violation of a city ordinance which prohibits standing in one place for more than twenty minutes at a time. Certain retail florists are said to be at the bottom of the demonstration.

The Public Garden is glorious with tulips, pansies and daisies. Supt. Doogue is making preparations for a fine display this summer. The city greenhouses at the South End are now running smoothly and furnish facilities never before enjoyed by the department, for propagating and caring for the necessary plants. There are ten large houses. These are full to overflowing, however, and ten more houses could be utilized to advantage.

There have been large importations of rhododendrons, bays, hollies, aucubas, retinosporas and other hardy and half hardy decorative shrubs this season, and their use will add much to the general effect of the planting on the public garden.

W. J. S.

Chicago.

R. W. Cogan, with Kennicott Bros., was married recently.

Many thousand tulips are now in bloom in the public parks and crowds are attracted thither by the gay display.

Geo. Wittbold is building two new houses at his place in Lake View. They will be used for the increase in his stock of ferns and palms.

Anton F. Grabow, formerly of Appleton, Wis., has started up at 63d and Wallace streets, Englewood, where he has built several small houses.

August weather has prevailed for the past week, the thermometer ranging from 75° to 90° during the daytime. Most remarkable weather for this time of the year.

Lake Forest was cut to pieces by hail the night of the 9th inst. F. Calvert & Son, the McCormick rose houses, F. Anderson and Thos. Appleton lost at least half of their glass. The storm was terrific, almost a cyclone, the hail came in sheets, many of the stones over an inch in diameter and the noise of the crashing glass could be heard for a considerable distance. No insurance.

Chas. Reissig decorated the club house of the Chicago Club very handsomely for the reception to Robert T. Lincoln before his departure for England as United States Minister to that country. The fireplaces were hidden by banks of tulips, *Harrisii* lilies and roses, the remaining decorations consisting almost entirely of handsome vases of various flowers placed on mantels, tables, etc. A draping of *Asparagus tenuissimus* and *stephanotis* over a large oaken mantel was very graceful and effective. The only design was that of an eagle, filled with snowballs. Small groups of decorative plants were freely placed at effective points throughout the building.

Kennicott Bros. report receipts of outdoor lilac simultaneously from Peotone, Ill., 125 miles south of Chicago, and Lake City, Minn., 225 miles north, a difference of 350 miles in latitude. The time of blooming at these two points is usually three weeks apart, and it goes to show that the very unusual spell of hot weather at this season has been very widespread, north as well as south. It is feared that the result of the present weather which is bringing out such a glut of flowers will put stock in such shape that there will be a shortage for Decoration Day. The hot wind which has prevailed has spoiled flowers very fast. Everywhere are to be heard complaints of melted flowers.

Baltimore.

Easter trade in this city has quite realized all expectations, although business was so very satisfactory all through the usually dull Lenten season, that the Easter boom did not seem so pronounced.

There was probably an increase in the matter of church decoration. We had an opportunity Saturday night and Sunday of seeing about all the churches in Baltimore that it paid to see, and in many of them the decorations were much more elaborate than last year, and certainly more churches were decorated, but while

all of them were more or less beautiful, there was no special decorative feature in any of the churches visited sufficient to make a detailed description interesting to general readers. In this connection, however, I may mention a very pretty feature of the Sunday School exercises at St. Paul's P. E. Church. Each pupil—there were between 400 and 500—was presented with a potted geranium in full bloom.

Everything in the way of Easter stock was abundant enough to meet the demand and was of uniform good quality. The sale for plants was better than last year, and while there was no special dearth of cut flowers there was enough trade to use up all serviceable stock; boxes of choice roses and other flowers were in good demand, and several florists report an unusually brisk trade in cemetery work.

As to prices, some florists believe that they were lower than last year, while some others think—late season and every thing considered—that prices were quite up to last Easter; it is probable, however, that prices averaged a little lower than last year. Perles sold at \$1.50 per dozen; La France, \$3; Mermets, \$1.50 to \$2.50; Luizet sold readily at \$4; Jacqs, \$3, tulips, \$1.25 to \$1.50; violets, 50c per 100; callas, \$3 per dozen; L. longiflorum, \$4 per dozen and so on. Callas, L. longiflorum and L. Harrisii sold in pots at from 50c. to \$1.50 to \$2. To put the Easter trade for '89 in few words it was generally, quite as good as last year, and in several respects a more desirable trade.

April 24.

A. W. M.

Pyrethrum Uliginosum.

This is one of the grandest hardy herbaceous perennials ever introduced to cultivation, and it blooms in the fall—August, through September and into October—at a time when such flowers are very welcome both in private and commercial gardens. It is not only one of the most profuse and showy of all plants when in bloom, but the individual blossoms are large (some $2\frac{1}{2}$ to $2\frac{3}{4}$ inches across) full, pure white with yellow disc, and they last well as cut flowers. The flowers should be cut for use soon after they open, as the centers darken with age. It is of the easiest possible cultivation, all it needs is rich soil.

The accompanying illustration is from a photograph by Sandman, Glen Cove, taken Sept. 22 last, of a plant grown in our grounds. When photographed this specimen was six feet one inch high, 17 feet in circumference four feet from the ground, and had thousands of open blossoms upon it; besides, before then we had cut hundreds upon hundreds of flowers from it. And this plant is only two years old. Where the season is long enough, as with us here, it ripens seeds abundantly and it can be increased in this way, but usually our method of propagation is by division as we would a phlox, a helianthus or veronica. It blossoms the first year from seed or division.

Mr. William Robinson, editor of the *London Garden*, in his invaluable book "The English Flower Garden" says of this handsome plant: "P. uliginosum is one of the noblest of all tall-growing herbaceous plants, forming dense tufts five

to seven feet in height, terminated by lax clusters of pure white flowers, each about twice the size of the Ox-eye Daisy. It is a stately plant for a moist, rich border, and is robust enough for naturalizing in damp places. It is excellent for cutting purposes; its value is increased by the blossoms being produced late in autumn before the chrysanthemums come in. It thrives best in a deep, moist, loamy soil, and may be readily propagated by division." It is a native of eastern and south-eastern Europe.

Now, why is this plant so scarce in cultivation? It isn't a new plant by any means; I have grown it for twenty-five or more years; in fact it is one of the first garden plants I ever knew. All the care it needs is a bit of good ground kept clean. If your object is cut flowers you can get ten thousand marketable blossoms a year from a dozen or score of established plants; if your object is plants for sale you can get up an immense stock in a very short time.

John Saul tells me he has received some good round abuse about this plant from customers, they declaring it was nothing other than a white weed. This showed their deplorable ignorance. The habits of the plants—stems, foliage and style of growth are totally different, this pyrethrum never blossoms in summer, the white weed never (except now and then a stray individual) blooms in September. Any one seeing a specimen of this pyrethrum in full bloom, or even looking at the accompanying illustration, will at once observe the absolute fallacy of the white weed idea. True, there is a resemblance in the appearance of the flowers, but not more so than there is to those of single China aster, Pyrethrum roseum, or Paris daisies, and those of this pyrethrum are larger than any of the others. And this pyrethrum never becomes a weed either by spreading at the root or from seed.

When I was at John Thorpe's place a few weeks ago I noticed a lot of familiar looking plants most a yard high in pots. "What have you got here, John?" "Pyrethrum uliginosum, my boy. You don't know what a grand thing that is for forcing for Easter. It may seem odd that a fall blooming plant should be useful for this purpose, but it requires a certain treatment just as does *Hydrangea paniculata*, and then the thing is easy enough." It isn't early starting so much as early maturing that counts with these out-of-season plants.

WM. FALCONER.

Glen Cove, N. Y.

The Moon Flower.

I have delayed replying to your request concerning "Moon flowers" hoping that I might give some "authority" as to true botanical name of the white seeded variety which my friend Mrs. Thompson, it seems to me, is too willing to dub "Giant Moon flower" or "*Ipomoea Childsii*." To have this question settled I last year sent seed to Prof. L. H. Bailey, but as they failed to bloom I have lately shipped him at Cornell University four varieties of plants which I am satisfied will bloom and which I hope will settle the matter. I am satisfied in my own mind that the white seeded moon flower is the true "*Bona Nox*," in which Jas. Vick and many others agree. All that Mrs. Thompson says in her communication as to the "Black Seeded" and "White Seeded" I can endorse. By black seeded she means *Ipomoea noctileuca*, first brought to notice by Messrs. Henderson & Co.

Messrs. Henderson & Co. sent me

three years since some of their plants to grow seed from for them. I placed these plants of theirs beside seedlings of the white seeded and theirs being from cuttings of course were the first to bloom. But not one bloom of *I. noctileuca* made a seed pod until after the white seeded bloomed and fertilized the black. The seed thus secured were small, generally one, sometimes two and occasionally three seeds to a seed capsule. I planted these seeds, securing flowers some five inches in diameter, which were perfect blooms, not requiring fertilization by the white to mature seed. These I again planted with white seeded and last year secured what I call "the cross" or hybrid. These seeds are all colors, black, brown, some spotted black or brown and white, some white with a black eye, indeed all shades. Those plants produced blooms averaging nearly as large as the white seeded—about six inches in diameter. This cross or hybrid, not only was as vigorous a grower as *I. noctileuca*, but I think more so. It produced double and treble the blooms of the white seeded and what was most desirable, it proved much the earliest, for I gathered ripened seed from them early in July whilst the white seeded was not in full bloom until September, although I had given the white seeded best attention and planted seed earlier in hotbeds. These cross seedlings were planted side by side, full two months earlier in blooming than the white seeded. I believe I have a larger practical working experience in moon flowers than any one in the United States, as I plant not by hundreds, but by thousands and acres.

I am glad I delayed writing as it gives me an opportunity of correcting your Florida correspondent on two points. First, the wild moon flowers he speaks of, seed of which I have and plants of which I have bloomed here and seen growing in Florida is not *I. Bona Nox*, nor is it *I. noctileuca*, nor is it comparable in foliage to either the white seeded or *I. noctileuca*. In bloom it is somewhat larger than the last named, but not so large as the white seeded or "the cross." As to this white seeded I have known of it for thirty years and grown it off and on for seventeen years, offering it in 1886 (I think) for sale to Messrs. Jas. Vick and Henderson & Co. Vick at once pronounced the seed sent "*Ipomæa Bona Nox*." If I could have the naming of the white seeded I should name it "*Ipomæa grandiflora alba*," which would indicate not only its white bloom, but white seed and it certainly is so far "grandiflora," as the magnolia of our forest is "grandiflora." If any of your friends wish to study the moon flowers in all their varying forms and will visit me in September I will—if no severe storm prevents—show them the grandest sight of blooms they ever beheld; 100,000 blooms per night will be a low estimate, and among them I hope to have some pink and white. The second point on which I wished to correct your correspondent was in the statement that the "white seeded would not root." The cuttings of vines of the white seeded will root, for I have vines growing from cuttings now.

I enclose some of the "cross seed." If I had not already trespassed too far I would add some peculiarities of the various vines. Until the S. A. F. meets in Buffalo let us keep the white seeded as it may now be and then, I for one, shall urge "*Ipomæa grandiflora alba*," i. e. "Bona Nox," whilst the society may give "the cross" or "hybrid" I offer, what

name they deem worthy. It will be there with the white seeded to speak, each for itself. A. W. SMITH.

Americus, Ga.

[The seed sent exhibited a variety of shades from black to white.—ED.]

The First Mention of Moonflower.

James McPherson, Trenton, N. J., writes: "If Mr. Falconer will look over the index of the 1881 volume of the *Gardeners' Monthly* for *Ipomæa grandiflora*, he will, I think, find under that heading the first mention of the moonflower in this country."

Mr. Falconer writes: "The article referred to by Mr. McPherson appeared in the *Gardeners' Monthly*, page 312, October, 1881. He says there '*Ipomæa grandiflora* * * is popularly called the 'moonflower' by the Hindoos, and the 'night lily' by the Europeans.' In Peter Henderson's Handbook of Plants, page 135, we find: 'Moon Flower. A popular name of *Ipomæa Bona-nox*.' And this book bears the date of March 1, 1881, and I received my copy of it April 7, 1881. And Mr. Henderson informs me that he had used the name Moonflower in his business years before 1881."

Phalaenopsis.

This handsome genus comprises about sixty species and varieties which, with few exceptions, are natives of the Philippine Islands, where they are found growing on trees, rocks and very rarely on the ground, enjoying a maximum of heat and moisture and shaded from the direct rays of the sun.

In cultivation the requirements of these plants are generally not well understood and well grown collections are the exception. A good deal of skill and care is required to keep these plants in good health for many consecutive years, fortunately they are very tenacious of life and one season is sufficient to make quite a nice plant from what would appear to be but a dead stump. One of the greatest dangers to avoid is that of overflowering, strong healthy plants may easily be ruined in one season from this cause. The safest plan is to cut the spike immediately the leaves show the least sign of softening. It is usual with us to cut the first spike of *P. amabilis* as soon as the flowers are matured. In a short time another raceme will appear and often a branch from the cut stem. This method gives us two crops of bloom and does not injure the plant so much as leaving the first flowers till they fade.

We grow our plants in baskets and cylinders using a good many large crocks and filling up with lumps of peat and moss. Keep them very wet during the growing season, at no time allowing them to become dry and only shade sufficient to prevent burning. The winter temperature ranges from 60° to 80° and that of summer from 75° to 110°.

The collection here contains fifty-five kinds, including some very beautiful

hybrids and about a half dozen unique species. From among these not more than five would be of any use to a florist for cutting purposes, or that could be procured for anything like a reasonable sum. The best of these is *Schilleriana*, a very robust kind with large mottled leaves and producing panicles of rosy colored flowers from 20 to 100 in number, according to the size and vigor of the plant. *Stuartiana* is a grand free growing species and for general purposes may be described as a white and much speckled form of the preceding, but will give a far greater proportion of flowers than it for the size of plant. *Amabilis* is a large white flowered kind bearing racemes of about a dozen flowers, three to four inches across; the racemes of this as well as the two following will continue to grow from the point and produce flowers for a long time. *Sanderiana*, a rose colored form of the preceding this may be called (though there is a great variation in the leaves, some even approaching the mottled leaves of *Schilleriana*). This is one of the handsomest species in the genus and will become very popular. The Java variety of *grandiflora* is strong and very free growing producing larger flowers and altogether is more robust than the Borneau type. This species varies very little from *amabilis*, but comes into bloom somewhat later, and for this reason a few plants should be grown. F. GOLDRING.

Kenwood, N. Y.

[The illustration is of a phalaenopsis house under Mr. Goldring's charge.]

Planting Lilies in the Open Ground.

We are often advised, especially in the case of Californian and superbum lilies, to plant the bulbs very deep, say 12 to 16 inches under the surface of the ground, because they are found growing wild at that depth. The bulbs go down so far to get away from the parching heat or drought of summer, and for this reason we too should bury them as deep when we plant them in our gardens.

Well, this seems reasonable enough. But my advice to you is—don't you do it. When you get your lily bulbs plant them out as soon as practicable in deeply worked land, but only three or four inches below the surface of the ground, then mulch over them with some short loose material, through which the lily stems may come up with perfect ease, and as growth and summer heat advance you can add to the mulching, taking care not to allow the mulch to pack up against the lily stems. And, if need be, support your larger lilies by light stakes, for, unless so supported, when they are in bloom and a rain and wind storm comes they are apt to be shaken about and injured, and the wrenching at the neck hurts the bulbs.

Staking lilies requires much pains. If the stake is put down alongside the stem, probably the bulb may be injured by the stake, perhaps severed from the old clump, always put in the stake four to six inches ahead of the stem so as to be sure to get beyond the bulbs. One of the chief advantages of lilies among shrubs is the use of the shrubs in place of stakes to support the lilies.

In a year or two, if your lilies have thriven well and the bulbs are in good condition and show a tendency to rise up to the surface rather than go down into the ground, lift them about the end of September and replant at once, say six inches deep, according to kind and con-

AMERICAN FLORIST CO.

VIEW IN THE PHALÆNOPSIS HOUSE AT MR. ERASTUS CORNING'S, ALBANY, N. Y.

dition of bulbs. After having grown most every species of hardy lily in cultivation, and many varieties, and having had my full share of the ups and downs in lily cultivation, I would not now plant any lily I know of deeper than six inches below the surface of the ground. Any protection it should want in summer from heat or drought, or in winter from cold, I can supply from the surface of the ground. And if the lilies are inclined to bury their bulbs any deeper they will find the deeply unfasted soil of the garden as easy to work down into as they would the earth in their native swamp or mountain home.

As regards soil, all lilies will grow in loamy soil as well as in peat or swamp muck, and a swamp is not necessary for the cultivation of any lily, not even for *L. superbum*. In high dry land in our garden our superbums, scores and scores of them, have from 15 to 35 blossoms to a stem, and some of the stems run nine feet high, while in rich swamps in the neighborhood, where *superbum* abounds wild I have not yet found 30 blossoms to a stem.

W. F.

Ivy-Leaved Pelargoniums.

What an improvement has been made in the size, color and variety of these beautiful plants during the last ten years. Formerly they were only considered worth growing extensively for bedding purposes; now they are grown in large

quantities for supplying cut flowers. In pots of various sizes for associating with other plants for house and conservatory decoration, in baskets for suspending from the roofs of houses, or when grown into large pyramidal-shaped plants they are most useful. Having at the time some large and well flowered specimens which command more than passing notice, I hope these few cultural notes will be the means of inducing other readers of the *Journal* to try a few plants in the same way, feeling sure they will be amply satisfied with the results.

About this time last year we placed a few strong plants singly into 13-inch pots, using a compost of three parts loam, one of horse droppings, and a little lime rubble; the loam was used in a rough state, the manure was passed through the half-inch sieve, and the lime rubble through one a little smaller. A stout stake was driven into the center of the pot, two pieces of lath an inch wide, half an inch thick and 2½ feet long were nailed together in the center and placed on the rim of the pot, so that each end projected an equal distance beyond the rim, under which a stout wire was placed, and the cross pieces of lath fastened securely with smaller wire to the ring under the rim of the pot. Another ring of stout wire was next made an inch less in diameter, and bound to the cross pieces of lath with wire; two other rings

of stout wire were then made, one of them being one third less in diameter than the bottom ring, and the other a little larger than the top of the stake. Six stout pieces of wire were cut into equal lengths, the points turned in the form of a hook, one end of each being fastened to the small ring which was placed on the top of the stake; these lengths of wire were then fastened equidistant around the medium-sized ring, placed about midway between the top of the stake and the bottom ring; this done, the wires that formed an oblique line were tightened and fastened to the bottom ring, taking care to have them at equal distances, so as to leave the trellis an evenly shaped pyramid. If the oblique wires are found too far apart for training the young growths it is an easy matter to run up smaller wires between them when the outline is once made with stout wires.

When each trellis was completed we trained the young shoots so as to cover as much of the framework as they would. The plants were then kept in a vinery for a few weeks, afterwards transferred to a greenhouse, and in June placed in a sunny position in the open air, the flowers being kept picked off throughout the summer, and the young growths regularly trained in. When the shoots were likely to become crowded before other parts of the trellis was covered they

were occasionally thinned. In September the plants were placed in a coolinery, where they were kept till the house was started, by which time the trellis was evenly covered. The flowers, which had up to this date been regularly picked off, were then allowed to develop. Just before they began to unfold the shoots were all stopped and tied-in here and there as required, and the plants placed in a light position in the conservatory, where they received plenty of water at the roots, and a weekly sprinkling of Beeson's manure, and in return for the labor bestowed upon them are daily unfolding fine trusses of their charming flowers.

It may occur to careful readers that the time taken to cover the trellises above described was rather long for these go-ahead days. True, we might have covered them with growth in little more than half the time, but our object was to secure very short-jointed growth, which would yield a mass of flowers at a given time.

The following varieties are all good and reliable: Furstin J. von Hohenzollern, Abel Carriere, Jeanne d'Arc, Comte Horace de Choiseul, Isadore Feral, Comtesse Horace de Choiseul, A. F. Barrou and Sarah Bernhardt.—H. Dunkin, in *Journal of Horticulture*.

A Queer Freak of the Geranium.

By this mail I send you some Queen of the West geranium leaves. Mr. Bettman, a florist of New Albany, Ind., has about 200 plants of this geranium in 4-inch pots, and on every plant where the flower stem is thrown up it forms a round leaf such as I send you, instead of flowers. Can you tell what causes this or have you heard of any such case before?

These geraniums are vigorous, healthy young plants and have the full sun, and the plants from which they were propagated are blooming all right, as are also other varieties standing next to this lot.

Louisville, Ky. FRANCIS MORAT.

[The leaves sent were funnel-form. A most interesting case. Leaf monstrosities of this sort are not rare among young seedlings of wide-leaved, soft-wooded plants, and we have before now seen them in "geraniums," but we do not now remember of any other case than this in which the malformation has been secured and perpetuated in plants propagated from cuttings. Last summer we observed quite a number of the first true leaves of *calceolaria* seedlings malformed in this way but none of the later leaves showed any inclination to the freak.]

Carnation Silver Spray.

This variety has not yet superseded Hinze's with me, but it has done so well that there is a probability of it taking the place of all other white carnations; not, however, before I give it a thorough trial next season. We are often too hasty in discarding older sorts and replacing them with novelties of good promise, but which develop later on some very bad traits.

I have not found any trouble in propagating them as Mr. Siebrecht relates, fully 90 per cent having rooted all the season excepting the first lot put in early, of which about 10 per cent rooted. The young plants hold their own with any of the older sorts in vigor and growth. I will plant next season equal proportions of Hinze's White and Silver Spray and a goodly portion of L. L. Lamborn, which has given me an abundance of very large handsome pure white flowers. The text-

ure of the Lamborn flowers is very light; has any one had experience in shipping them?

A. M. HERR.

Lancaster, Pa.

Seasonable Notes.

Continue to pay attention to the stopping and training of specimen plants, beginning to bend the young shoots into position; as soon as they are two inches long some care is required to prevent the slipping off of some kinds at the junction with the main shoots, all such kinds I tie first loosely to the main shoots and then strain from the tie instead of the junction.

Plants that are for cut flowers must be kept tied as they grow and most of the side shoots rubbed off; as they break naturally with three lead shoots select the strongest to continue and rub off the other two. Watch for the strongest, as sometimes the leader is crippled or weak. Remember to water every plant thoroughly when dry, if once is not enough go over it again and again. Plants that are newly repotted will require careful watching for a few days so as not to become water logged; this applies particularly when rain storms of two or three days occur and the atmosphere is at almost saturation point, these conditions frequently happen about the middle to the end of this month.

The first batch of cuttings I put in for commercial cut flowers will be planted out on a bench in two inches of soil and as far apart, instead of potting into 2-inch pots; these will again be transplanted four inches apart before finally planting them where they are to flower, which will be the end of June. A batch of cuttings will be put in about the 15th of this month in a frame on a slight hotbed made of half leaves and grass, when these are rooted they will be treated as stated above and finally transferred into 8-inch pots and kept stopped until the 1st of August.

I require 200 tall grandiflorums for the back wall in one of my greenhouses and am treating them as follows: They are about eight inches high and have not been potted; I had a furrow made with the plough, in this I dropped a six inch fence board, the soil was then filled in and the plants placed nine inches apart along the furrow. I find that grandiflorum is the very worst of all to suffer from mangled roots or starvation.

My stock plants for next season's cuttings will be planted in the open field on rather poor soil and left to grow without let or hindrance of any kind; this will be found a good plan to keep stock in a healthy condition.

The demand will be for good flowers this season and poor chrysanthemums will not pay to cut off the plants.

Pearl River, N. Y. JOHN THORPE.

Chinese Yam.

As I have unintentionally given offense by placing the value of "Cinnamon Vine" roots at \$1.50 per bushel, it is in order to explain that when some 30 years younger than now I read of the wonderful merits of this plant (*Dioscorea Bata-*

tas) as a vegetable product surpassing in value and weight of crop per acre our common sweet potato. The late Mr. Prince, of Long Island, was the introducer, and his claims for the then new vegetable clearly demonstrated that it could be grown profitably for even less than the price above quoted. Still he—and the writer—may have been mistaken, although we are told now that the tubers grow so large that it "is hard work to dig them!" see page 418. To a person familiar with the particulars of its early introduction, however, it looks unbusinesslike to have the old thing rechristened without at least retaining the original in brackets. Your Long Island correspondent must admit that the name he defends (Cinnamon Vine) is totally misleading, hence his endorsement of the "Rainbow Plant," "Vegetable Peach," etc. lose the weight that his signature should carry with it.

NOMENCLATURE.

[We fail to see anything in Mr. Falcouer's notes which can in any light be considered an "indorsement" of the plants named. He merely takes the position that catchy popular names are not only admissible, but desirable when used in conjunction with the botanical title, and in this we certainly agree with him.—ED.]

Narcissi.

Our page illustration shows a number of varieties of narcissus which were among the lot recently bloomed from bulbs sent us by Mr. Thomas S. Ware, Tottenham, London, England, last fall.

Golden Spur was one of the largest and handsomest of the lot, a rich golden yellow. Maximus was also a grand flower of a similar shade. Obvallaris, while smaller, is of a distinct and pleasing form, of a rich yellow, and outlasted all the others when cut, a most desirable feature in a cut flower; it is largely used for forcing in England, and is commonly called the "Tenby Daffodil." Bicolor Horsfieldi with white perianth and rich yellow trumpet is a very handsome flower and at once attracts attention. Sir Watkin is a charming variety with yellow cup and lighter colored perianth. Incomparabilis Princess Mary is a striking flower with a rich yellow cup and white perianth. The smaller unnamed flowers are forms of the triandrous section. The well known Paper White needs no description. Poeticus ornatus makes an excellent cut flower, much superior to the well known poeticus; we published an illustration of this variety some time since. Irish King or Yellow King, an excellent yellow trumpet daffodil was also illustrated by us last year.

There were over sixty varieties in all, of which many others were worthy of note and all beautiful and interesting in a collection, though quite a number were so nearly alike that close observation was necessary to detect the difference between them. Some of the small flowered forms are charming and the contrast in size between the large flowers of such varieties as Henry Irving or the Emperor and the small nanus is almost ludicrous.

The very accurate engravings are reproduced from the "Little Book of Daffodils," issued by Wm. Baylor Hartland, Cork, Ireland.

Stock Plants.

Select your stock plants now. You want the first pick of your stock for that purpose. Label them stock and instruct

Trumpet Maximus

Obvallaris

Paper
White

Bicolor
Horsfieldi

NARCISSI

all your employes so that they may not be sold through error. Don't do as too many small florists do, sell out all the best and use the leavings for stock. You need the very best on your place for this purpose. Then give them a good position. Don't set them under the benches or in some other place where their growth may be injured. If you want the best results your stock plants must be grown on continuously and perfect health maintained. A check will induce disease and weakness of constitution, which will surely be trausmitted to the plants propagated from them.

Notes on New Tea Roses.

The notes that have recently appeared in the columns of the *Garden* about the new tea-scented rose Mme. Hoste (Guillot, 1887) all tend to confirm the good opinions formed of it during the past season, although Mr. Benjamin Cant rightly enough demurs to its description as a rival to Marechal Niel. Nevertheless, that so good a judge as Mr. Cant should express his unqualified approval of Mme. Hoste, as recorded on pages 65-6, will dispose many rosarians to make trial of Guillot's seedling. The blooms of it exhibited by Mr. William Paul, when a first class certificate was awarded to it by the Royal Horticultural Society, were of great beauty, and the vigorous growth of the plants on which they were produced was also noted with satisfaction. Out of doors during the past season, in spite of the wet, some good blooms were produced on the young plants, especially late in the year, when several very beautiful examples managed to develop between the showers. That the variety has achieved a success in America is also satisfactory, as there the propagation of a promising rose takes place on a scale sufficiently extensive quickly to find out the weak points in the character of a flower. The tendency of American growers seems to be not to grow a great number of varieties, but to grow an immense number of plants of a few good sorts, so that if a rose is found to be worth propagating on a large scale over there, it must at any rate be a good forcing or pot rose. The flower is well described on page 66 by Mr. Benjamin Cant, except that he does not draw attention to two important qualities, viz.: the great size and depth of the individual petals and the close pointed center of the flower. The sustained beauty, however, of the lemon-tinted blossoms from the bud state until fully developed has not been overlooked either by growers in this country or in America.

Another of the half dozen most conspicuous teas of the past season is the last contribution of Lacharme, Henriette de Beauvau. This rose is a climber, and therefore not likely to be valuable to cultivators "on the other side," where most of the rose growing seems to be done under glass; consequently reports about it from America will probably not be forthcoming. But favorable opinions have already been expressed by good growers in this country, Mr. Cant among

them, not only on its character as a vigorous climber, which is obvious, but also as to the quality of its flowers, which seem quite likely to prove useful for exhibition. Their color is almost that of Perle des Jardins, while the habit and entire appearance of the plant strongly recall Mme. Eugene Verdier (Levet, 1882), though, unlike that very distinct variety, which is liable to be very considerably injured by frost, Henriette de Beauvau appears quite hardy, the plants having withstood the recent cold unharmed, while the shoots of Mme. Eugene Verdier were, as usual, killed back for a considerable distance from the tips. There is need of a good yellow climbing rose that shall be hardy. Marechal Niel is too susceptible of chills; most of the Dijon teas are too tawny in color to be described as yellow; while Cloth of Gold, in spite of "C. J. G.'s" note on page 66 as to its beauty in Ceylon, may for all practical purposes be ignored as a climber out of doors in this country. Of course there is Mme. Barthelemy Levet, very beautiful in color, but very small and by no means free; and there is also Belle Lyonnaise, but the color is very pale, the flower often quartered or malformed, while the plant is tender and generally loses its foliage early in autumn. So that if only Henriette de Beauvau's flowers are as freely and continuously produced as they are well formed and clear in color, the last seedling that Lacharme sent out will like so many of its predecessors, supply a long-felt want.

Another tea whose handsome flowers have already won golden opinions is Lady Castlereagh (Alex Dickson, 1888). Here there is no question about the quality of the blooms, which are large, well formed and of great substance, and which open freely. In color they are of a soft yellow at the base, suffused externally with a rosy shade. Probably many rosarians, even if they have not yet grown the plant, have seen the flowers exhibited at various shows, at which they have already been awarded three first class certificates; but it may be of interest to add further that the plant proves to be a good sturdy grower, with exceptionally handsome foliage, which is very persistent, and the wood does not appear in the least damaged by the frost.

Some pretty flowers were developed in the autumn of Mme. Philemon Cochet (S. Cochet, 1887), which was figured in December in perhaps the best colored plate ever published in the *Journal des Roses*. The flowers are of a delicate pale rose tint, full and freely produced, though possibly with hardly sufficient depth to take first rank; but their stems being stiff and erect, they are displayed on the plant to the best advantage. The same good habit characterizes Princesse de Sagan (Dubreuil, 1887), which produces in the utmost abundance flowers of the brightest velvety crimson color. If these can only be obtained as good in size and fullness as they are in form, the raiser of Marquise de Vivens will have made a most striking addition to the teas. Of the freedom and brilliancy of the novelty there is no doubt, every little plant blooming directly; but the flowers, partly perhaps owing to their immediate production on diminutive plants, have been small, though well shaped. In color, however, at any rate Princesse de Sagan is not one of the conventional (and generally deservedly despised) red teas, but is a genuine brilliant crimson.

The sixth of the new teas which has attracted immediate attention is Nabonand's climbing Ideal (1887), which has

been recommended as a bud rose. The raiser, attempting to describe its shades of color, declares them indefinissables, and he is not far wrong. It has been called an autumnal Fortune's Yellow, a climbing Ma Capucine, and sundry other things, to evade the description of tints of rose and yellow so blended and commingled as to render their analysis a seemingly hopeless task. The raiser's attempt reads: "Yellow with shades of metallic rose, lighted with touches of bright gold," and, in spite of the allowance that it has sometimes been supposed to be necessary to make in converting the flowery language of the south into our colder northern modes of expression, this can not be held to be exaggerated — *T. W. Girdlesstone, in London Garden, February 9.*

Two Sports from the Perle.

Nanz & Neuner, Louisville, Ky., send us blooms of two sports from Perle des Jardins. One is white in color, and named "White Perle des Jardins," the other is pink and named "Pink Perle des Jardins." The blooms received were about the size and shape of a small Perle, but as they were presumably from very young plants it may not be just to condemn them on account of small size. Both were fragrant and the foliage of each had the characteristics of the yellow Perle. Of course time only will demonstrate whether they will be of value to the florist, but sports from the Perle are certainly worthy of a thorough trial and we shall be glad to hear the result of such trial.

In view of the fact that a sport from the Perle, which originated in England, has been named "White Perle" it might be well to change that of this American sport.

ROSE MADAME LAMBARD.—Has any one tried this as a forcing rose for winter flowers? We should like to know how it behaves in the forcing house.

Hail Insurance.

Mr. W. T. Jackson, Larned, Kansas, who lost some glass by hail recently writes us expressing his pleasure at the promptness with which his loss was made good by the Florists' Hail Association in which he held a policy. He expresses the belief that at the very low rates made by the association no florist can afford to carry his own risk, and hopes that the day will soon arrive when the required 5,000,000 feet of glass is insured, and the association can add insurance on plants as well.

Thanatophore.

This apparatus for destroying insects in greenhouses, which has recently been constructed in Paris by Mr. Bleu, and which is claimed to be already extensively used; seems to me ought to be tried in this country, or if it has been tried, some report regarding its usefulness should be secured. The invention is designed to use the vapor or steam from tobacco juice, instead of the smoke as generally used. It is claimed it kills the insects more surely than smoke and is in no way damaging to plants or flowers.

The cut represents a thanatophore heated by coal. A smaller size is also made, heated by a lamp. The cut is from a Swedish publication.

If this steam fumigation is really good, it seems to me that a much easier method could be used where the houses are heat-

ed by steam. If a tank filled with tobacco stems was connected by a pipe through the bottom from the boiler, and another pipe from the top run into the greenhouse and branched off to the different sections as would be needed, a permanent fumigator would be obtained with very little cost.

As to the real value of this I would like to see it discussed through the FLORIST.
G. MORT.

Long Island Plant Notes.

BY WM. FALCONER.

THIS SPRING has been the best, most open and even of any that I remember. We have had very little wet or slushy or extra warm weather.

OUTDOOR VEGETATION is seven or eight days ahead of what it was this time last year. At the same time the nights are so cool that tender plants can not be left unprotected with safety.

FIVE YEARS AGO I had 72 distinct kinds of sempervivums, but nobody cared for them, and I neglected them. But now a little breeze to boom them is gathering in the east, so I have cleaned and replanted mine and find that I have lost 16 species. Carelessness does not pay.

HOW COULD YOU lose them? some may ask. By allowing other plants to spread over them in summer; this will kill most anything.

GROWING MAYFLOWERS in frames as a substitute for violets doesn't pay.

PLANT OUT some gloxinias in a cold frame and shade the glass well.

WE HAVE a 10-year old established specimen of *Pyrus Parkmannii* in bloom and it is the prettiest shrub of any kind now (May 6) in blossom in our collection. Only a crab apple, but, oh, so lovely!

MAGNOLIA SOULANGEANA (May 6) and *gracilis* are the showiest among their race; the *Yulan* and *stellata* are past, *Kobus* is pretty and delightfully fragrant, but not free enough; *parviflora* nor any of the large leaved tree or evergreen magnolias have burst a bud yet. The evergreen (*M. grandiflora*) is hardy in well sheltered nooks here; it becomes perfectly deciduous in winter and blossoms beautifully in June.

PEONIA TENUIFOLIA—You can not glut the market with either the single or double flowered forms; and its good looks when in or out of bloom will always sell it.

ALYSSUM SAXATILE VAR. COMPACTUM is the brightest and best of all yellow flowering hardy perennials we now have in bloom. It enjoys an open sunny exposure and dryish soil, and is now a cushion of bright golden yellow very fragrant blossoms. Easily raised from seed and will bloom the second year. Perfectly hardy.

ARABIS ALBIDA began to bloom about the middle of April and was at its best about the 25th to the 30th. It is a dense spreading evergreen little plant with pretty white flowers, which in spring are produced in such profusion as to completely hide the foliage. A hardy perennial of the easiest possible cultivation, and readily raised from seeds or division. There are some very poor forms of it afloat. Get the good ones.

I HAVE GROWN a lot of *Trillium erectum*, *T. e. album* and *T. grandiflorum* in pots for three successive years, and they are finer this—the third year—than they were the first year.

PRIMROSE DAY is taking hold among

us. Make a note of it. *Primula vulgaris*, the common wild yellow primrose of the European woods, is the primrose meant, and not any of the other colored or garden forms of it or any other species. You can get up a stock of it from seed and seedlings raised now will make blooming plants next April. But the germination is very unequal.

THE WHITE FLOWERING form of *Cosmos bipinnatus* (Peter Henderson's Pearl) is in fine bloom with me in 6 inch pots. The plants are three months old from seed, bushy by pinching and attractive with many blossoms. Should I plant them out they would soon stop blooming and set to growing, but by restraining

THANATOPHORE.

them in pots they will keep in bloom all summer long.

THE FINEST "red" pansy I had this year was from Turner's seed, the biggest pansy from Zirngibel's, the cleanest white from Veitch's, and the prettiest dark one from Burpee. Burpee's New German isn't a very large pansy, but its dark velvety form is very captivating. I am unable to distinguish between a good many giant strains.

PANSIES DON'T SEED very well with me before May, so now I am rooting out every inferior variety and leaving only the choicest; these will ripen a good deal of seed that I won't gather and many self-sown seedlings will appear about the old plants next July. And they should be pretty good stock too.

ONE WOULD hardly think that from the little dry bits of chips-like roots of anemones I planted last fall in a frame, I would get such double and glowing blossoms. Try some next fall, plant them in September or early October in a cold frame and treat them as you would pansies, only give them more head room.

IRIS RETICULATA is one of our earliest and sweetest spring flowers, perfectly hardy and easily forced. But for florists' use for cut flowers the bulbs are too expensive and the blossoms are not big enough.

MINA LOBATA is flowering very freely with me as a pot plant. It does love warm sunshine, plenty of root-room and head-room and good living, such as it may have when planted out in the garden in summer, and then it will grow apace. But if it is flowers you are after, curtail the root-room and stint the supplies.

WHEN I LOOK upon the exuberance of "Chenopodium Atriplicis Victoria," I feel grateful for something—pig feed will be plenty.

MYOSOTIS ALPESTRIS VICTORIA hardly compacts itself as closely as its picture would signify, and it is better for us that it does not, for then it would be too short for cutting, now it is lovely. Sown at the same time as and grown along with *dissitiflora* it forms a good succession to it.

MY BIGGEST and best candytuft is *Iberis Gibraltarica* var. *hybrida*. Of annual or biennial duration, not hardy but of easy cultivation in a cold frame, and readily propagated from seeds or cuttings.

THE PROFITABLE narcissuses are the hardy, free blooming, live-anyhow sorts. *Incomparabilis*, trumpet major and poet's narcissus are such with me.

AQUILEGIA SIBIRICA is our finest early columbine, earlier than any other species or variety that I have got, and it is a vigorous but compact grower, copious and showy, and without any of the lankiness peculiar to many columbines. Its flowers are large, bluish purple and with yellow tipped petals.

WHENCE ORIGINATED THE NAME MOON FLOWER here as applied to *Ipomæas*? Its origin was suggested by the abundant use of these *ipomæas* as decorative plants in a lager beer garden in Washington, D. C., and the sensation they caused there when they were in bloom. My informant writes me: "A lager beer garden man planted his arhors with it in the suburbs of Washington and it created such a sensation in moonlight nights among his patrons that he made a little fortune by it."

CLEMATIS DAVIDIANA.—I have grown this plant for twelve years and the longer I handle it the better I like it. It is quite a favorite around Boston, where it is pretty generally distributed, but little known away from there. It is a hardy herbaceous perennial (not a vine), a native of northern China and Mongolia; and although a vigorous grower and profuse bloomer the individual flowers are not showy. The plants grow three to four feet high and are bushy and need support; the flowers are blue, bell shaped like those of a single hyacinth, deliciously fragrant, and produced in great profusion in axillary bunches for two feet along the ends of the branches and laterals. The species is a capital grower and long-lived, not bright enough for florists' cut flowers, but a most desirable amateurs' plant. It blooms from the end of July to the first of September. It is propagated by means of division and root cuttings in early spring; one old plant will yield a multitude of young ones. It has never ripened good seed with me.

CLEMATIS TUBULOSA is another hardy herbaceous species from China, of the same style but not so good as *Davidiana*, and it comes into bloom a fortnight later. Its flowers are blue, in axillary clusters and somewhat panicked at the ends of the branches and laterals, but not so numerous, showy or fragrant as are those of *C. Davidiana*. It forms a thick bushy growth, three feet high if supported, but if allowed to grow naturally its branches rest upon the ground, but so orderly as to

suggest itself to landscape gardeners as a good plant for the front of shrubberies. It is easily propagated by division or root cuttings in early spring; indeed, in March the thick roots are dotted with myriads of white wood buds as we find them in the roots of *Anemone Japonica*. And it ripens seed with us and the self-sown seedlings come up plentifully all around the old plants.

WILD VIOLETS are mighty pretty things and come in after our regular garden violets are past. Hereabout the variegated flowered forms of *V. cucullata* are abundant wild, and on being transferred to the garden grow with a vigor and bloom in a profusion unknown in a wild state; and they luxuriate in common dry soil. Three years ago Mr. Manda sent me the white blooming form, and now it has naturalized itself from seed about the frame ground and part of the herbaceous grounds with the greatest freedom, and now that it is in bloom it is a generous and pretty flower. The common *V. palmata* and the much divided leaved *V. pedatifida* have run wild in our borders, and pretty plants they are too. Nowhere in America is *V. pedata* so abundant as on the Hempstead Plains near here. Its variety *bicolor* is the most desirable. Nicholas Hallock sent me a white one last year. Among white species *Canadensis*, *blanda* and *lanceolata* abound in a wild state wherever the conditions are suitable. *V. pubescens* in several forms is plentiful in rich woods and is the only yellow violet around here. But *V. rotundifolia* makes a prettier garden plant. A dozen years ago I gathered a number of plants of it in the woods at Lewiston, Maine, brought them home and grew them in the garden where they thrive and bloomed well and became well established perennials and becoming associates of such other gems as fringed *polygala*, *dalibarda*, *linnaea*, dwarf cornel, star flowers and rue anemones.

What to Buy for Shrubs.

[CONCLUDED FROM LAST ISSUE.]

The Siberian apricot, *P. Siberica*, stands well here, and is a fine, sturdy plant, very striking even when out of leaf, on account of its curious colored bark. The varieties of *P. Persica* are short lived when budded on the peach, but are very handsome. They make neat plants and live much longer when worked on the plum. *P. Pissardi* is a good addition to our gardens when purple foliage is required. *P. Simoni* is a fastigiate tree, with light rose-colored flowers and large purple fruits like an apricot. *P. Davidiana* is a species with rose-colored flowers, from China. *P. Americana* and its varieties are beautiful in early spring; they are adapted to large shrubberies, but by judicious pruning can be kept at any desired height. Of *P. pumila* we have two forms, one from the Great Lakes, with willow-like foliage, growing five or six feet high, covered in spring with small white flowers, and in summer with black, cherry-like fruit. Our common variety of *P. pumila* seldom exceeds three feet in height; besides its flowering quality it is one of the finest plants for autumn coloring; it might also be improved as a fruit. *P. spinosa* and its variety *flore pleno*, and *P. Myrobalana* and its varieties, are all hardy. *P. tomentosa* is a fine rose and white flowered species, from the mountains near Pekin. *P. triloba* is known by all, but its single variety has not been in this country until a few years ago; by

the lovers of single flowers it will be considered a great acquisition. The double-flowering almonds, *P. Japonica alba*, *rosea* and *multiplex* are all good shrubs, hardy, but short lived. *P. pendula*, when well grown, makes a handsome plant for the lawn. *P. chamæcerasus* is grafted either on standards or low on the ground; usually the former, but when grafted low it forms a much more effective plant. *P. semperflorens* continues in bloom more or less all summer. The double flowering cherries, of different varieties, are well worthy of a place in the garden.

In the section of spiræas we have good material to choose from. *S. salicifolia* is the parent of many garden varieties, such as *Billardieri*, *Leueana*, *latifolia*, *rosea*, *Bethlehemensis*, and others. These, if pruned well back every spring will throw flower spikes twice the size of those not pruned. *S. Douglassii* is a beautiful species from the Northwest; this also has a number of very showy varieties. *S. chamædrifolia* and its variety are good flowering kinds. *S. millifolium*, a curious rare species from Nevada, and *S. predia* and its varieties are the earliest species, except *Thunbergii*, which is no doubt one of the finest plants for foliage or flowers.

S. hypericifolia and *S. canna* are early bloomers. *S. trilobata* and *S. Van Houttei* are two of the best late flowering species. *S. Japonica* has long been known as *callosa* and *Fortunei*. They are all late bloomers, and if the old flower heads are cut off as soon as out of bloom, they will on good ground bloom well the second time. *S. sorbifolia* and *S. Tobolski* are good showy plants, with large spikes of pure white flowers in June.

A sub-section of the spiræas are the neillias. The species *opulifolia* and its variety *aurea*, are coarse growing shrubs with white flowers. *N. Amurensis* is a fine, bold growing species from Northern Asia.

Exochorda grandiflora is one of the most magnificent of our hardy shrubs. *Rhodotypos Kerrioides*, with white flowers and chocolate-colored seed, is a good old-fashioned shrub. Of the rubus there are several species worthy of a place in the garden; there are *Rubus odoratus*, the red flowering raspberry, and *R. deliciosus*, the Rocky Mountain raspberry; the flowers of the latter are pure white, two inches across. This has never been plentiful, as it is difficult to propagate. *R. villosus flore pleno* is rather coarse, but the flowers are quite showy. *R. hispidus* and *R. Canadensis* are useful to cover the ground in places where few other plants will grow. *Neviusa Alabamensis* is a rare shrub, with white flowers in June. *Potentilla tridentata* is a neat, low growing species with white flowers. *P. fruticosa* has yellow flowers in abundance most of the summer.

In *rosa*, of the natural species there are many which are beautiful in their place, and the essayist thought it would become fashionable to have a garden of single wild roses when the ground can be spared. They are seldom much troubled with insects, and one or two syringings will keep them clean for the season, and what with the flowers in summer and the fruits in autumn and winter they will repay by their cheerfulness all trouble. Some of the best native species are *blanda*, *Arkansana*, *acicularis*, *Nutkaua*, *Californica*, *Fendleri*, *lucida*, *Caroliniana*, *nitida*, *foliosa* and *setigera*. Of the American varieties, *lucida* and *nitida* are the two best for covering banks or planting as undergrowth for larger plants. *R. foliosa* is nearly yellow and very late. *R. seti-*

gera is the wild Michigan rose, one of the finest of all the single American roses, flowering profusely after all the others are done. This is the parent of the Queen of the Prairies. Of the foreign single roses the best is *R. repens*, a climbing species growing eight or ten feet high. *R. glauca* is a fine species with pink flowers and showy fruit. *R. Alpina* is the earliest wild rose. *R. acicularis*, *cinnamomea*, *dumetorum*, *canina*, *Belgradensis*, *rubigenosa* and *tomentosa* are all good species. *R. rubrifolia* has purple foliage, which stands well all summer. *R. arvensis* and its varieties are all desirable. In the Scotch roses we have many fine varieties of all colors; they have neat foliage and dwarf habit. A few of the best are *fulgens*, *pencillata*, *venulosa*, *pimpinellifolia* and *vestiflora*. *R. alba* is a fine species, with good foliage and flowers; it is the parent of several of our good garden roses. *R. pumila*, from the Minden Alps, is a dwarf species with fine large flowers. *R. rugosa* and its varieties, such as pink, crimson and white, are worth a place in any garden. *R. Kamtschatica* resembles it, but is even coarser in its habit. The fruit of this and *rugosa* are very ornamental. *R. multiflora Japonica* is very desirable, both in flower and fruit.

Of *pyrus* the varieties of *arbutifolia* are very ornamental; *pubens*, *serotina*, *grandiflora*, *melanocarpa* and *erythrocarpa* are all worthy of cultivation. The fruit is brown or black, and ripens during the latter part of the summer, excepting that of *erythrocarpa*, which is brilliant red, does not ripen until the autumn, and hangs on to the plant well into winter. *P. spectabilis*, *prunifolia*, *baccata*, *Parkmanni*, *Ringo*, *floribunda* and *malus flore pleno* are all showy plants. *P. Japonica* has been improved so that many varieties can now be had—single red, white, carmine, rose and other shades, besides several semi-double varieties. One of the finest dwarfs of late introduction is *P. Japonica Maulei*, which seldom exceeds two feet in height, and is more floriferous than any of the other varieties.

Cotoneaster vulgaris, *C. acutifolia* and *C. tomentosa* might be termed perfectly hardy. The flowers of this genus are not as showy as those of some others, but the fruits are very ornamental and last almost all the season. All the shad bushes are hardy, and they are the earliest of spring flowering shrubs. They vary in size from about a foot to twenty or thirty feet high. The flowers are white and the fruit is edible. The species are *Asiatica*, *alnifolia*, *alpina*, *vulgaris* and *Canadensis*. In the *Canadensis* section there are a number of well marked varieties. The variety *oblongifolia*, from the White Mountains, is the earliest of all, and has edible fruit. Variety *rotundifolia* has round leaves, and in the species *Canadensis* the leaves are of a red color when they begin to open.

Among the hydrangeas there are some species that might be termed perfectly hardy; these are *radiata*, *arborescens*, *paniculata* and its variety *grandiflora* and *vestita* and *vestita pubescens*. *Vestita* and its variety are the earliest to bloom; and are followed by *radiata*, *arborescens*, *paniculata* and *paniculata grandiflora*, so that we can have them in bloom from June until September. *H. scandens*, the climbing hydrangea, is a good addition to our hardy shrubs.

Of the deutzias we have *gracilis* and *parviflora*, the latter a new species from Japan, with white flowers a few days earlier than *gracilis*.

Among the mock oranges there are

many good hardy flowers. Some of them are *Philadelphus latifolius magnificus*, a fine variety, with large white flowers; *nivalis*, pearly white; *grandiflorus*, a fine large late variety; *Zeyheri*, with flowers not much larger than *deutzias*; *Gordonianus*, a fine late American species; *microphyllus*, a miniature species from Colorado; *speciosus*, a fine variety; *nivalis*, a very pure white; *Columbianus*, a fine intermediate flowered species, and *coronarius* and its varieties. The *grandiflorus* section is the latest.

Mr. Jackson went on to speak of many more hardy shrubs, and we regret that we cannot give the substance at least of the whole of his interesting and valuable paper, but space will not permit.

Western Notes on Heating Green-houses.

The intrinsic value of a given quantity of fuel is in exact proportion to the amount of latent heat that is stored within it, and all things being equal the relative value of the different kinds in use is about the same; that is to say, taking this point as a criterion, during the months of August and September here the current price of hard coal is \$8 50 per ton, soft coal, mined forty to sixty miles from this city, \$3 per ton, and seasoned hard wood \$4 50 per cord; at these prices their value is about equal, the difference being in the cost of labor required in their consumption.

That process or system which in the disintegration of this fuel by combustion generates the greatest amount of heat, elaborates it to the furthest extremities, placing it under perfect control, so that the heat may be utilized when and where it may be required, must be conceded to be the most economical and the most desirable, and while there are constantly new theories advanced and numerous plans and devices recommended for the efficient heating of greenhouses, unfortunately this information is largely drawn from a theoretical standpoint, without practical experience, the result is, when these plans and theories are put to a practical test they fail to accomplish the object intended. But I would not be understood as ignoring theoretical problems, yet I have found from experience that combined with a knowledge of the philosophy of heat and an acquaintance with the laws relating to hydrostatics and steam, a close practical observation is required to fully understand their practical working, and I further assert, that the intelligent florist who has given the subject his study, is better qualified to arrange his plant and will derive more satisfactory results than if he had placed it in the hands of a professional engineer.

The first step to be taken is the selection of a suitable furnace and boiler. Upon this point it is almost universally admitted that all complex arrangements should be studiously avoided; experience teaches that the simplest form in which a boiler can be constructed, provided that as nearly as possible it absorbs all the heat which is generated, is by far the most economical and the least liable to get out of order. In houses covering an area of 10,000 feet, or less, two medium-sized upright cylinder boilers, of the style shown in the annexed cut, will be found to be both economical and efficient in steam heating, this boiler can be made either with or without a magazine or self feeder. In larger establishments and where a regular fireman is employed two horizontal tubular boilers, with the flues not less than 2½ inches in diameter,

would be preferable—of course, in either case these boilers should be connected, using them jointly or singly as required. In the above arrangement it will be found that one boiler will supply all the heat necessary during a greater part of the firing season, holding the other in reserve for extreme weather, or in case of an accident, matters of no small importance, which more than one florist has learned to his sorrow. The placing of two boilers may cause a greater outlay in the start, but the saving of fuel alone will make up the difference of the cost in a season or two.

For hot water, I am inclined to think the most efficient form in which a boiler could be constructed is what I would call a double saddle-back (similar to the one described on page 333 current volume of the *FLORIST*). Some years ago I used a boiler of this description for steam, but it was a failure, the circulation between the lower and upper shells was so rapid that a portion of the water was carried

along with the steam up into the pipes, producing a conflict which seriously interfered with the perfect circulation of the steam. If fierce agitation of the water is a means of absorbing heat (which it certainly is), then this plan for a hot water boiler must be a success.

Next to the furnace and boiler and of equal importance is the arrangement of the flue. From some cause unexplained writers have been comparatively silent upon this subject, and yet I believe that failure can be traced to the want of proper draught almost as frequently as from any other cause. In a properly arranged furnace and flue there should be a steady draught, without a consequent loss from heat escaping, or "a stream of hot gas rushing up the chimney into space," a problem which a writer in the January 1 number says the professional engineer has not yet solved. In the general arrangement a horizontal flue should be carried from the top of the boiler, connecting with a pit placed outside the building if possible and directly under the smoke stack, this pit besides being a receptacle for the soot dropping out of the chimney, is of far greater importance as an expansion chamber. In the accompanying sketch a side view is given of the inside of a boiler, with the course of the flue into the smoke stack. While this arrangement is by no means new, yet the advantages derived from it appear to have been entirely overlooked, aside from the greater immunity from fire. The direct draught from the boiler into

the smoke stack is intercepted and retarded (not obstructed and checked), the result being that combustion is exhausted, the gases consumed and the heat absorbed within the boiler, a very small percentage escaping with the smoke.

If there are those who are skeptical as to this assertion, I would invite them to visit me during a prolonged period of zero weather and I will convince them that they can lay their hand upon the smoke stack (and hold it there) without discomfort.

Presuming that the means for generating the heat are as near perfect as possible, the next step is as to the best mode of conveying that heat into the houses, for it must be remembered, that both steam and hot water are nothing more than vehicles employed to transfer the heat from the storehouse i. e. the boiler, into and distribute it through the houses. As to which of the two systems is the best, there is a difference of opinion, while some advocate hot water, others with equal vehemence favor steam, and while there is no doubt that both are good, each having its advantages and disadvantages and while I am favorably disposed towards steam, believing all things considered that it is the most economical and the easiest controlled, yet the florist (unless for causes other than want of efficiency) who would tear out his hot water plant to put in steam, I would consider a fit subject for some lunatic asylum, and at the same time the one who would do away with steam to put in hot water should have quarters in the same building, but in a new place, where the decision must be made as to which system shall be employed, it will be proved that steam without doubt has the advantage over hot water in the cost of construction. In point of utility they are pretty equally balanced, with this difference, that steam might be compared to an express and hot water to a freight train. If the construction is all right, they'll both get there.

Again the laws relating to steam and hot water being similar, the general arrangement should be the same, that is carrying the supply pipe perpendicularly above the boiler to the highest point overhead and an uniform and decided descent in the pipes the whole length of the houses, both from and back to the boiler. In hot water the expansion being greatest as the water flows out of the boiler, its specific gravity is consequently the least and the water being almost volatile is easily and quickly carried to the highest point and when this is once reached, with the expansion tank connected with the return near the boiler, the circulation through the pipes must be rapid, for, while it is not my intention to enter a discussion of the laws of gravitation, to use a schoolboy phrase, water will run down easier than up hill, whether hot or cold.

As to steam heating, and the beneficial effects of overhead radiation, I have already given my views upon these subjects in the columns of the *FLORIST*, but I see there is a tendency to run to the other extreme, by placing all the pipes above the benches. Now, while I am fully convinced that the solar rays passing through this upper radiation are intensified, yet they have not the penetrating influence of the direct rays of the sun and with all the heating surface above the plants, there is danger that while making a vigorous top, there is not a corresponding root growth.

D. M. REICHARD.

St. Joseph, Mo.

Overhead Heating.

Most of us are satisfied with the fact that the sun's heat gets here in some way, and the question of how is not of general interest, but as your Milwaukee correspondent raises the question it may be well to state the case correctly. The sun's heat is generated in the body of the sun itself and is radiated in all directions into space. As far as we can see most of that radiated heat is lost. The earth receives a small portion of it which is absorbed to some extent by objects exposed to its influence; these objects become warm and radiate back into space any heat in excess of the temperature of the surrounding air. If an object is held near a hot stove the same process takes place. No one would care to assert that the heat did not come from the stove or that it was generated in the exposed object. The statement made at the convention was "The heat does not come from overhead, but is generated wherever the sun's rays strike inside the greenhouse."

We build greenhouses and heat them in order to make the most of the short winter days, when Dame Nature is certainly very "stingy" in her supply of heat and we are obliged to help her out. It seems but natural that this auxiliary heat should come from the same direction as the main supply. What we want is a short but perfect summer day. At night all is different and any imitation of a summer night is and always will be impossible so long as our houses are surrounded by what is practically a thin sheet of ice whenever the temperature drops below freezing. We must adjust our conditions to the daytime and the night must accept them.

If the overhead system had nothing behind it but a theory or an opinion, it would not be worth so much consideration, but practical experience seems to show that it possesses great advantages over other methods. Those advantages have already been described in these columns.

During the past winter the overhead system has been tried on a large scale at South Sudbury, Mass., by Mr. F. C. Fisher. He built two houses about 40x300 feet each, very flat and the glass all sloping to the south; one house is planted to carnations, the other to lettuce. The plants are all in the ground, no benches and no excavated paths. Steam heat is used and the pipes are, of course, all overhead. The whole arrangement is a new departure in greenhouse work and has attracted much attention. The crops were first class; the lettuce took a premium from the Massachusetts Hort. Society and the carnations, though rather small, owing to late planting.

It would be going too far to attribute this success to overhead heating, and it might be difficult to show that it had anything to do with it; but the experiment certainly demonstrates that unusually good results are possible under that system. An interesting experiment in heating greenhouses has been conducted during the past winter at the Hatch experiment station, of the Massachusetts Agricultural College, under the direction of Prof. S. T. Maynard, of the division of horticulture.

"Two houses were constructed during the summer of 1888, 75x18 feet, as nearly alike as possible in every particular. Two boilers of the same pattern and make were put in, one fitted for steam and one for hot water; the steam for heating the east house and hot water for the west

and most exposed one. * * * The two boilers and fittings were put in so as to cost the same sum and were warranted to heat the rooms satisfactorily in the coldest weather." The temperature of the two houses was taken five times a day and the coal was carefully weighed. The experiment was continued during January and February. The record is tabulated in bulletin No. 4. The result shows a saving of nearly 20 per cent of coal to the credit of the hot water boiler, with an average temperature 1.7° higher than given by the steam boiler. "The temperature was more even where heated by hot water, and consequently there was less danger from sudden cold weather. This was strikingly shown on the night of February 22nd. The average outside temperature for the day was 34°. At 9 p. m. it was above 32° and proper precautions not having been taken for so sudden a change as followed, at 6 o'clock on the morning of the 23d the temperature of the room heated by steam was 29°, while in that heated by hot water it was 35°."

"Conclusion: While this test is conclusive for the two boilers employed in these two houses as constructed and for this unusual winter, in a larger house and in a winter where the temperature runs lower and with greater extremes, different results might possibly be obtained, but this can only be settled by carefully made and accurately recorded tests which we hope another year to make. We would suggest that if those who have kept accurate records of the temperature of their greenhouses, together with the amount of coal consumed, will send us the figures, giving size of house and kind of heating apparatus, we shall be glad to put them on record in our bulletins for the benefit of those who are thinking of building new houses or refitting old ones."

While future experiments may modify the above result, it is not probable that they will reverse it.

In regard to the piping of these houses Prof. Maynard writes that the flow pipes are overhead, well towards the ridge, two of the six return pipes are in the angle formed by the glass and the top of the benches, and the other four returns are below the benches at side of paths. He says: "We feel sure that we obtain better results than when they are all located on the sides."

The water is under pressure in 2 inch pipes. L. WIGHT.

Framingham, Mass.

MR. ROBERT GEORGE, of Storrs & Harrison Co., Painesville, O., Mr. E. G. Hill, of Richmond, Ind., and Mr. Anthony Wiegand, of Indianapolis, expect to sail for Europe on the Cunard steamer Etruria, leaving New York June 5. They will return in time for the Buffalo convention.

New Pure White Tea Rose The "QUEEN."

This splendid new Rose originated with us two years ago, and having proved valuable, is now placed on sale. It is

A PURE WHITE, SPORT FROM SOUVENIR D'UN AMI.

A vigorous, healthy grower and continuous bloomer, producing a great abundance of Buds and Flowers all through the season. Flowers are PURE WHITE, showing no trace of Pink, makes good finely formed Buds and is moderately full. Petals are thick and of good substance, opens well, is a good keeper and very sweet. We believe it will prove especially VALUABLE FOR EARLY WINTER FORCING AS WELL AS FOR OPEN GROUND PLANTING, and recommend it for extended trial with the belief that it will be found a valuable acquisition to our list of Pure White Tea Roses.

PRICE: Strong well matured plants from 2 1/2-inch pots, \$3.50 per doz.; \$25.00 per hundred. Two year plants from 5-inch pots, \$9.00 per dozen.

ROSE, CLIMBING NIPHETOS.**CLIMBING
NIPHETOS
ROSE.**

The Most Valuable Introduction Since Marechal Niel. A small plant in a pot exhibited before the Royal Horticultural Society in London bore forty-eight splendid blooms, and was awarded a First Class Certificate. It Flowers Very Freely, differing from those of old Niphetos (from which it is a sport) only in that they are of a purer white, not showing the pink tinge, and that they seem more delicately scented. SHOOTS HAVE RUN UPWARDS OF TWENTY FEET IN ONE SEASON. This variety blooms only from the lateral shoots while the main stem grows on with a most decidedly climbing habit. A valuable help to those who supply CUT FLOWERS FOR MARKET. To be distributed in the United States in May, 1889, by JAMES VICK, SEEDSMAN. Send for particulars to KEYNES, WILLIAMS & CO., Salisbury, England, or

News Notes.

LARNED, KAN.—W. T. Jackson was hit by hail April 16. Loss slight, fully covered by insurance in the Florists' Hail Association.

SAN DIEGO, CAL.—The annual floral festival occurred April 23 to 27. It was as usual a grand success, netting a good sum for the charities of the city.

NEWARK, N. J.—Michael Duffy, the nurseryman of Kearney, who was accused by his wife of having tried to poison her died May 1 in the Hudson county jail.

CHARLESTON, S. C.—The Floral Fair, April 23-25, was the most attractive one held in this city for many years. The exhibits of cut roses were especially good.

OAKLAND, CAL.—Mr. Jas. Hutchison and wife and Mr. and Mrs. D. Flint leave for a tour of England, Scotland and France on May 9, sailing from New York May 25.

SAVANNAH, GA.—There was a very creditable exhibition on the occasion of the Floral and Art Exhibition April 23-25. The cut roses were the feature of the exhibition.

OREGON CITY, OREGON.—Mr. Sidney Clack, formerly of Chicago, has located here. He has purchased five acres of land and will begin at once to build two greenhouses 18x100 each.

WILMINGTON, DEL.—Jas. Lewis & Co. have built four new houses, two 85x18, one 45x18 and one 70x6. The wife of L. E. Baylis died recently after a lingering illness of several years.

BROOKFIELD, MO.—The Missouri State Horticultural Society will meet here June 4-6. Rates will be given on the railroads. Premiums will be awarded for exhibits of flowers and berries.

WASHINGTON, D. C.—The newly organized local Florist Club is considering a plan for holding a chrysanthemum show next November, also the feasibility of establishing a flower market.

PITTSBURGH.—Flowers were plentiful and good at Easter. Prices lower than last year but aggregate sales were greater, made up largely of orders for loose cut flowers. Lilies were in abundant supply.

MINNEAPOLIS.—Wm. Desmond of Kewanee, Ill., has arranged to move his greenhouse establishment to this place, where he will build seven houses. The style of the firm will be Wm Desmond & Co.

CINCINNATI.—The wife of B. P. Critchell, the well known florist of this city, died suddenly April 29 of heart disease at the age of 44. She leaves with her husband seven children, two boys and five girls, the eldest 20 and the youngest 4 years of age.

INDIANAPOLIS.—An advance sheet of the premium list for the third annual chrysanthemum show of the Society of Indiana Florists, to be held in this city November 5-9 next, has been issued. Copies may be obtained from Wm. G. Bertermann, secretary, this city.

BROOKLYN, N. Y.—Fire destroyed the residence of Florist Bates at Laurel Hill April 24. The building was a Revolutionary landmark, and was filled with relics of that epoch. The house stood near the Long Island Railroad, and Mr. Bates claims that it was set on fire by one of the company's locomotives. The loss

on building and contents is \$6,000. Mr. Bates suffered additional loss by damage to his greenhouses.

COLUMBUS, O.—W. S. Devol has resigned his position as secretary of the Columbus Hort. Society to accept a place in the state university of Nevada, at Reno, as agriculturist of the state experiment station. A. D. Selby was elected to succeed him at the last meeting of the society. At the same meeting it was decided to issue the journal of the society as a quarterly hereafter instead of a monthly as formerly.

PHILADELPHIA.—The Easter trade was larger than ever before. There was a good supply of flowers and all were sold at good prices. Church decorations were larger than last year and the use of flowers was more general. Basket trade has fallen off, but there was a largely increased demand for lilies and loose flowers. Blooming plants were in brisk demand. Fifty of the florists of this city are already booked for the Buffalo convention.

TOLEDO, O.—A Broadway family who had a magnificent hydrangea in full bloom on their lawn found one morning to their sorrow that all the blossoms had been stolen. Having some paper flowers, excellent counterfeits of the real ones, they filled them with a fine chemical dust which causes uncomfortable itching, and fastened them upon the plant from which the blossoms had been taken. They promptly disappeared the following night, and their owners had the satisfaction of knowing that whoever took them had the itch for several days.

SAN FRANCISCO, CAL.—The exhibits at the third annual flower show of the Woman's Exchange were of unusual excellence. Prominent features were a choice collection of decorative plants and cut flowers from the public parks; cut blooms of 150 varieties of roses, each one labeled, from E. Gill, Oakland; a bank of wild flowers, from the Hotel del Monte, Monterey; Japanese, Australian and other plants, from H. H. Berger & Co., and numerous exhibits of cut roses. The State Floral Society will give an exhibition this month, probably about the 15th inst.

NEWBURGH, N. Y.—E. M. Peattie & Bro. intend to enlarge one of their violet and rose houses the coming summer. They are also building a stone wall—200 feet on North Miller street, 150 feet on Farrington street—on top of which will be placed a fancy wire fence. It will add much to the attractiveness of their place. Wm. H. Cornish & Co., seedsmen, have removed from Water street to Broadway near the Academy of Music where they have built three greenhouses 50x20 in the rear of their new store. They will grow cut flowers for retail trade in addition to their seed business.

MONTREAL.—The Easter trade, in the opinion of all the leading florists, has never been equaled in any previous year, there being good demand for everything in the way of flowers and plants. The quantity of lilies and spiræas sold on Easter Saturday was enormous. The supply of good roses, though large, was not at all equal to the demand. White flowers were in best demand; very little made up work was called for, the trade was almost entirely for loose flowers and plants, the great bulk of which was used for church decorations. Tuesday, the 23d, was a big day for roses (St. George's

day), red roses particularly, Gontiers and Bennetts being worth more than Brides. The action of one of the leading daily newspapers in giving away seven or eight thousand roses to the public was quite a God-send to some of the florists who had piles of Bon Silenes left over from Easter, there being little demand for that class on Saturday.

Holiday Prices.

Maine is a long way from any flower center and I do not often see contributions from our state in the columns of your paper. However, we sell a few flowers here and our patrons are as sensitive to the changes in prices during holiday week as others.

I have been much perplexed for several years to know what course to pursue. I grow most of the flowers we sell, but at Christmas time am obliged to buy. For two years we have retailed at Boston wholesale prices, explaining when we could, that the increased demand obliged us to buy a part of our holiday stock and that we were charging only wholesale prices, but notwithstanding our explanations we have to meet much dissatisfaction, nor does it end there. Many silent buyers who do not know why prices are all at once so high, and perhaps too modest to ask, go away with the impression that flowers are too costly for them to buy and we see them no more. The report is handed from one to another and who can judge of the amount of mischief wrought to the trade by this unhealthy custom of doubling prices during the holidays.

As the custom now is, the grower sensibly plans to bring in as many flowers as he can at this time at something of a sacrifice of a uniform supply from week to week. Does the gain more than counterbalance the loss? I think not and I look forward to the time when all the growers and florists shall rise as one man and do away with the evil.

An important feature in trade is to give satisfaction to the buyer and any method or practice which tends otherwise is an unquestionable injury. That the present manner of conducting our holiday trade does this I think no observant florist can deny.

F. H. M.

Bucksport, Me.

[Why not simply refrain from buying at holiday time, selling your own supply at what figure you please and allowing the surplus demand to remain unsatisfied? This would bring about the same condition of things that would follow if growers kept the supply uniform and made no extra effort to supply the increased demand at that time.—ED.]

The Seed Trade.

SEED TRADE ASSOCIATION.—Geo. S. Haskell, Rockford, Ill., president; Albert M. McCullough, Cincinnati, secretary.

The Seedsmen's Convention at Washington.

Secretary McCullough writes May 1, as follows:

"I have just completed arrangements with the Central Traffic and Trunk Line associations for special or reduced rates to our annual convention at Washington, to be held next month, and within a very few days will issue circulars to the association members notifying them of same, which with the reduced rates we have secured at the Arlington Hotel will enable the members and their friends to obtain first class accommodations all the way through at reasonable rates. As the stay at Washington will probably be for the entire week think it would be very desirable for all members to take their families and friends with them, particularly as they will be enabled to secure special rates both at the hotel and railroad for them."

Alleged Seed Frauds.

A suit has been instituted for \$13,731.30 against the A. B. Cleveland Company, the big seed growing concern, by Peter Henderson & Co., the Cortlandt street seed dealers. The Cleveland Company is the one which suffered such a severe shock about two months ago through the eccentricities of its president and Ko Ko in general, Mr. A. B. Cleveland, now a sojourner in Canada. Since his departure the company has been reorganized, but it will apparently take considerable time for the finger-marks of the ex-president's handiwork to wear off. This suit for \$13,731.30 is likely to be followed by others that will aggregate a very neat sum of six figures, probably in the vicinity of \$150,000.

The particular transaction on which this suit is based, and which, it is claimed, is identical with many others, occurred in 1887. In February of that year Henderson & Co. placed in the hands of C. P. Avery, a seed grower of Traverse City, Mich., to be planted on his Michigan farm, the following seeds: 200 bushels of Extra Early peas, 156 bushels of American Wonder peas, 10 bushels of Everbearing peas, and 20 bushels of Yorkshire Hero peas. The crop was to be delivered in fall of 1887, picked and in otherwise proper condition. In the fall the product, about 2,000 bushels of seed peas, was delivered. They appeared to be all right, and there was every reason to suppose that the seed had been shipped direct from Avery's farms. Henderson & Co. sold the seed to their customers and everything ran smoothly until the harvest time of the following year, 1888, when complaints began to come to Henderson & Co. by the score from farmers who had bought the seed peas saying that from expensive seed, such as the "Extra Early," there came only a crop of cheap, coarse Canadian peas. These complaints were often accompanied by threats of suit, so Henderson & Co. stopped the sale of all seed they had secured from Avery and started detectives out to investigate. The result of this investigation they claim proved conclusively that Avery had been acting as agent for the Cleveland Company, and that every bushel of seed which Avery raised for them under contract he shipped

to Cape Vincent, N. Y., where it was run through the Cleveland Company's mills and mixed with inferior. It is for damage done in this way that Henderson & Co. claim the \$13,731.30.—*New York Times*, May 5th.

NEW YORK.—The A. B. Cleveland Company, limited, dealers in seeds at No 47 Cortlandt street, whose president, Artie B. Cleveland, fled the city last January, is arranging with the creditors to take care of the indebtedness by the issue of bonds to run three years, to the amount of \$425,000. In accordance with this plan a chattel mortgage to secure the bonds has been filed, the trustees being Conrad N. Jordan, Horace K. Thurber and Peter W. Gallaudet. Two chattel mortgages for \$30,000 each have also been filed in Jersey City, to secure the First National Bank of Jersey City and another out-of-town bank. Where Mr. Cleveland is still a mystery and it is said nothing has been heard of him since he left town. His deficiency with the company is said to have been \$50,000. About two thirds of the creditors in amount have accepted the bonds.—*New York Tribune*, April 27.

KANSAS CITY, MO., April 28.—Suits were brought yesterday against W. W. Harnden & Co., seed dealers, on notes issued by Archie B. Cleveland of New York, a partner in the firm, who did business in New York and who raised \$50,000 last month on the firm's name and skipped to Canada.—*Chicago Tribune*, April 29.

Floral Surprises.

Floral surprises are a new idea to compliment young women crossing the Atlantic, especially after they have recovered from the unpleasant feelings incident to the first and second days. Fill a tin box with rose buds, lilies of the valley, violets or other flowers, with stems that will absorb moisture. Pack them in wet moss. Wrap the tin box in rubber cloth and a stout paper wrapper. Direct the package to the person intended to be surprised. Deliver the box to the steward of the steamship to put in his ice house or cold room, with instructions to deliver in three or four days, staking him at the same time. When the box is delivered the flowers will be fresh and, of course, a pleasant surprise. A young woman so complimented was a passenger on the last trip of the Umbria, who wrote her friend from Queenstown on Friday evening, when six days out from New York, saying: "I am wearing fresh roses and lilies of the valley this evening and have some left to wear when we land in Liverpool to-morrow." Here is an idea for florists and the young men of New York.—*New York World*.

MONTREAL.—At the last meeting of the Florists' and Gardeners' Club the thanks of the club were tendered to H. A. Siebrecht, New York, for the special premiums, consisting of a full set of the Dictionary of Gardening, copy of the Orchid Growers' Manual and \$25 in cash, offered at the March exhibition; also to Peter Henderson, New York, for a complete set of his publications.

BEGONIA SCHARFFII.—A correspondent of the *Gardeners' Chronicle* describes this begonia as the most magnificent of the genus and predicts that it will be generally cultivated when better known. He adds: "To those who are

unacquainted with it we might contrast it with B. metallica, though it is in every way superior to that species. It bears enormous fine heads of flowers, which last a long time in perfection, and has a strong constitution. Cuttings should be inserted when the growth is somewhat firm, and taken off about four or five inches in length."

The Nurserymen's Convention.

The fourteenth annual meeting of the American Association of Nurserymen will begin at Chicago, Ill., June 5, 1889. Railroad tickets for the round trip, from any part of the United States and Canada, may be secured by any person, whether a nurseryman or not, at a rate of one-third fare for the return trip. For circular giving full particulars about securing reduced railroad fare, etc., apply to Chas. A. Green, Sec'y., Rochester, N. Y.

PANSIES.

HUGHES'

SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

Forcing Bulbs for Fall Delivery

If you will make up a list of your wants and send us now, we will book same at importation rates. We are now making up our regular commissions to our growers in France, Germany and Holland, and will take your orders—large or small—at a slight percentage over cost if you will club with us to save freight, etc. REMEMBER, we handle no second grade bulbs. Our experience of many years in importing bulbs, enabling us to procure the very best quality at the lowest prices. If you intend to avail yourself of this opportunity, write us at once, giving varieties and quantities and we will furnish an estimate by return mail. We handle the following varieties in quantity—all splendid forcers:

Lilium Harrisii, first class, 5 to 7-inch.
" extra, 7 to 9-inch
" Candidum, best North of France grown
Longiflorum, Bermuda grown, 5 to 7-in.
Roman Hyacinths, White, extra, 11 to 15 centimetres.
Roman Hyacinths, Pink, extra, 11 to 15 centi.
Paper White Narcissus, extra.
Double Yellow Narcissus, Von Zion.
Trumpet Major Narcissus, true.
Freesia Refracta Alba, first size.
" extra large.
Tulips, La Reine, white.
" Belle Alliance, scarlet.
" Yellow Prince, yellow.
" Kaiser Kroon, crimson, yellow edge.
" Cottage Maid, pink and white.
" Van Thol, scarlet.
" Double Duke of York, rose and white
" Princess Alexandra, red and yellow.
" Imperator Rubrorum, scar.
[The three last named are splendid forcing vars.]
Lily of the Valley, best Hamburg pips.
Spiraea Japonica, fine clumps.

JOSEPH W. VESTAL, Little Rock, Arkansas.

FORCING BULBS FOR FALL DELIVERY.

NARCISSUS

and Other Popular Bulbs for Spring Forcing

SPECIAL PRICES UPON APPLICATION.

Narcissus Albicans, large creamy white trumpets; one of the best.

Narcissus Bicolor Empress, the Queen of the bicolors, immense trumpets, a great favorite.

Narcissus Bicolor Grandis, similar in color to Horsfieldi; but with stouter flowers and much later.

Narcissus Bicolor Horsfieldi, a great beauty and fine for cutting.

Narcissus Bulbocodium, "Yellow Hoop Petticoat," fine strong bulbs for forcing.

Narcissus Bulbocodium Citrinus, pale sulphur flowers, and very early.

Narcissus Emperor, the largest; immense stont flowers of a rich yellow.

Narcissus Golden Spur, immense deep golden yellow flowers, and wonderfully early.

Narcissus Henry Irving, rich yellow, large bold trumpets.

Narcissus Incomparabilis Cynosure, a beautiful single incomparabilis for cutting, yellow cup, divisions creamy white.

Narcissus Incomparabilis Stella, large single white variety, very early, fine for cutting.

Narcissus Major, true, one of the best forcing sorts, large yellow trumpets, similar to maximums.

Narcissus Nobilis, a first class variety for florists, free and early.

Narcissus Obvallaris, the true Tenby daffodil, one of the best varieties, forcing deep rich yellow flowers of great substance.

Narcissus Odorus Campernelle, the well known Campernelle Jonquil, very strong bulbs.

Narcissus Orange Phoenix, large double white flowers with orange center, good for cutting.

Narcissus Pallidus Præcox, the earliest of all, forces very freely, single, sulphur colored trumpets.

Narcissus Rugilobus, true, large yellow trumpet, very free and very early.

Narcissus Scoticus, the Scotch Garland daffodil, a beautiful variety both for borders and for forcing.

Narcissus Von Sion, true, the double deep yellow daffodil.

Freesia Refracta Alba, large bulbs for forcing.

Freesia Leichtlini, a nice contrast to preceding and forces well.

Gladiolus The Bride, flower pure white, fine for forcing.

Helleborus or Xmas Roses in great variety, and extra fine flowering clumps for forcing, can be supplied early in fall.

And many other first class sorts. List of varieties and price I should be happy to furnish upon application.

Heating.

In the issue of April 15 Enquirer asks: "How many feet of 1½ or 1¼ inch pipe is necessary for each 100 cubic feet of air space to maintain temperature of 60° with the thermometer 20° below zero outside."

In reply, we have a house 100 x 26 feet three quarter span, 10 feet high at highest point, which with average height at 8 feet gives 20,800 cubic feet air space. We heat said house readily all ordinary winter nights by steam with the following arrangement of pipes: Rising from the boiler with a 3-inch pipe to within two feet of the under side of the ridge, then running same size (3 inch) suspended from under side of ridge to farthest end of the house, then drop on each side by 2-inch pipe to branch T's fitted with valves from which four lengths of 1¼-inch pipe on each side of the house (front and back) and one end, receive the live steam and return the condensed water back to the boiler. The cold water ahead of the steam all the time.

The system, in short, carries the steam at once to the highest point, thence to the farthest point and then returns through the two runs of four 1¼-inch pipes to the boiler, 108 feet 3-inch pipe, 900 feet 1¼-inch pipe. To maintain temperature asked for (60° with temperature 20° below zero outside) would have one line of pipe additional on each side, say 200 feet. Our valves are so arranged that we can use one pipe on each side or the entire number, as may be needed.

Danvers, Mass. E. & C. WOODMAN.

SOUVENIR DE WOOTTON

WE SHALL KEEP OUR ORDER BOOK
OPEN FOR JUNE AND JULY.

Don't miss getting a hundred plants or more. We shall advertise the Cut Roses of WOOTTON, commencing in November, in all the leading newspapers, etc. in the United States. The demand for the flowers will be large. It has already been favorably noticed at the White House, and in Washington society circles. Philadelphia rallies at the cry of Wootton; and Mrs. Childs' rose will be the fashion for the winter of 1889-90. Large growers make a mistake in not growing a house of it.

Prices as before advertised. Plants in good condition delivered in June and July,

By **C. STRAUSS & CO.** P. O. Box 422 WASHINGTON, D. C.

Also for Sale by

JOHN COOK, 318 N. CHARLES STREET, BALTIMORE, MD.

MESSRS. STRAUSS & CO. still have for sale a good stock of young plants of all the leading Roses for commercial growers.

Gabriel Marc,

WOODSIDE, L. I., N. Y.

Are They All Good Mousers?

"Too many cats that catch no mice," remarked a florist friend who accompanied the writer through the greenhouses of another florist who had amongst his plants much unsalable and useless stuff. And how many places have much space occupied by plants of this description! How many there are in the trade who err in this respect! Have you any of these "cats that catch no mice"? If so you can do no better work than to cart them to the rubbish heap at once.

But how many more there are who have the correct kinds but feed and care for them so poorly that they have but little value as "mousers"! Is every one of your cats catching its full quota of mice? If not, your methods are wrong, and they should be righted at once if you expect to keep up with the procession. If you want to lag behind, be always in debt and never amount to anything, all you have to do is to sit down and declare that the only reason your competitor has better stuff is because his houses are more advantageously situated, etc., etc.

Quality is the watchword now. Good quality is going to win and poor quality is going to lose in the game we are now playing. If you have an idea that "it don't pay to grow extra good plants on account of the additional labor necessary," then the sooner you quit the better for there is positively no money in growing poor stock.

NEW DWARF POMPON DAHLIA PRESIDENT HARRISON.

This Dahlia is a clear yellow, very large flowers, and a free bloomer.

BERMUDA LILY BULBS.

PETER HENDERSON & CO. offer to florists the **TRUE BERMUDA EASTER LILY BULBS**, for delivery early in August. We are the largest

growers and dealers in this famous lily in the world; the acreage in Bermuda that is annually grown for us being double that of all other growers combined. We supply the leading dealers both in this country and in Europe. The bulbs we offer are invariably larger, stronger and heavier than those usually sold, for the reason that no expense is spared in fertilizing and cultivating. Experience has shown that bulbs so treated are greatly superior to bulbs grown on impoverished land year after year, which is the general Bermuda practice so that cheap bulbs can be produced, and which is known to be the real cause of the blight. The fact that we have not had the slightest indication of blight in our thoroughly fertilized fields is proof that it is caused by the starved bulbs grown to sell cheap.

We offer our large, heavy bulbs, warranted free from blight, to florists who will place their order with us **BEFORE JUNE 15th**, at greatly reduced prices. We forced 5,000 bulbs of the

TRUE BERMUDA EASTER LILY

during the months of December and January, the past season. The details of how we did it are very fully given in our

Wholesale Bulb List, sent free on application.

The Standard Pot.

An eastern potter favors us with his views as to the comparative value of hand and machine made pots. He says:

"The process of manufacturing pots by hand is by far the best, as a hand-made pot is always porous and is the best for a plant to grow in, and is the strongest that can be made, and the pores are not closed as in a machine made pot. The hand made pot is constructed of pure clay and water; and the clay has to be worked thoroughly before it is formed into pots, by a skillful potter. The machine made pot is made by a machine that has a revolving mould under a heavy pressure, which closes the pores of the clay. The clay is ground in a strong clay mill and comes out in small balls at the bottom of the mill. The ball is just the size required for the pot. The ball is then placed in oil, and then put into the pot machine, and a heavy lever is brought down, and the pot is formed. A good machine will make from 5,000 to 10,000 pots in a day, requiring one man and a boy to operate it; while a good turner, on hand made pots, will not exceed 1,000 per day; yet, he gets more pay for the 1,000 than the man and boy do for the 10,000. If any florist wants a porous pot he will have to buy those made by hand. It is the only pot that is porous. A machine pot has a tight body, and the oil that is used in the manufacture, forms a glassy surface and is like a piece of glazed stone ware. The way to tell a porous pot is by testing. Take three pots of each kind, hand and machine made, seal the hole in the bottom and fill with water, and see for yourself which will absorb the water the quickest. All manufacturers of flower pots would be willing to adopt the 'Standard' sizes, but not the ones with the heavy rims, as they cannot be made by hand, with profit."

The ideas above expressed are probably still held by some florists as well as potters. But in view of the fact that a majority of our best growers use the machine made pot, and that their plants are never excelled by any advocate of pots made by hand, the claim of superiority for the latter certainly can not be maintained. And the machine made pots are the cheapest.

Potting Plants.

Place your pots in a tub of water and when thoroughly wet take them out one at a time and scatter dry sand over the inside, add the piece for drainage and the pots are ready for the plants.

Plants potted in this way do much better as the dirt never sticks to the pot, the roots run around the inside of the pot more readily, it is never any trouble to remove the plant from the pot at any time, and the plant takes more readily to the new pot. NOAH VANDENBURG.

Vicksburg, Miss.

Tuberose Bulbs.

In a lot of tuberose bulbs received from an advertiser of "1st quality" bulbs, very few were more than 4 inches in circumference, probably one half were not over 3½, and they averaged but 2½ inches in length. Now, I would not call a tuberose bulb first quality if not 4 inches in circumference and a nice long tapering bulb from 3 to 4 inches long. Should we not establish a standard of some kind? A. C.

Now is the time if you have not already done so, to do some fine bedding for the good of the trade. Some well designed, well kept beds in handsome yards centrally located in your city will be such an advertisement as you can almost afford to make free of charge, though that would not be necessary. Have you not surplus stock which can as well be used for such purpose as wasted? Put in a few such beds even at cost and see to it that they are well kept. It is bread cast upon the waters that shall return.

ENGLISH growers report the daffodils and other bulbs blooming very poorly this spring and attribute it to the cool spring and cold wet summer of 1888. Also that Holland hyacinths and tulips forced the past winter did poorly while bulbs from the same stock bedded out have done well.

Society of American Florists.

One of the most important undertakings of the Society of American Florists, and possibly the most far-reaching and beneficent movement in the interest of horticulture in America up to the present time, is the work entrusted to the committee on "Nomenclature," which was appointed at the New York meeting of the society.

It will not be necessary to repeat at this time the objects whose accomplishment is sought by the formation of this committee, nor the details of the work it is expected to do, as the matter has been frequently alluded to in the various horticultural journals and much has already been written regarding it, so that the trade in general is well informed as to the state of affairs which has made the undertaking necessary, and the special reforms which it is expected will be brought about. But it will interest the trade and more especially the members of the society and the friends of horticulture everywhere to know that the committee has got down to work and has already mapped out the plan of campaign.

A full meeting of the committee was held in New York city on Wednesday, May 15th. The meeting lasted all day and a large amount of work was accomplished. From the nature of the case much of the investigation and labor of the committee must be done privately. This fact is pretty generally known and it is a pleasure to announce that in the opinion of those members who have been most watchful there never was less fraudulent substitution and misnaming of varieties than at the present time, so that it would appear that the knowledge of the existence of such a committee has had a salutary effect. That the work may be thoroughly and systematically done sub-committees have been appointed whose duty it will be to collect data and receive correspondence relative to the special section of plants to which they have been assigned. These sub-committees are instructed to report to the full committee at Buffalo in August next. It will facilitate their work much if all plantmen and others knowing of instances where varieties are being sold under wrong names, or where any misunderstanding or misrepresentation in regard to species or varieties is known to exist will address the chairman or any member of the following sub-committees:

On roses—Robt. Craig, Philadelphia, Pa., Edwin Lonsdale, Chestnut Hill, Philadelphia, Pa., Ernst Asmus, West Hoboken, N. J.

On carnations—A. E. Whittle, Albany, N. Y., John Thorpe, Pearl River, N. Y., Wm. Falconer, Glen Cove, N. Y.

On chrysanthemums—John Thorpe, Pearl River, N. Y., Wm. Falconer, Glen Cove, N. Y., J. M. Keller, Bay Ridge N. Y.

On bedding plants—G. L. Grant, 54 La Salle street, Chicago, Ill., Robt. Craig, Philadelphia, Pa., J. M. Keller, Bay Ridge, N. Y., A. E. Whittle, Albany, N. Y. On orchids—David Allan, Mt. Auburn, Mass., Benj. Grey, Malden, Mass., Wm. Falconer, Glen Cove, N. Y.

On palms, ferns and like delorative plants—C. D. Ball, Holmesburg, Pa., John Burton, Chestnut Hill, Philadelphia, Pa., W. R. Smith, Washington, D. C.

It will not be out of place to mention here that from present indications the convention at Buffalo in August next will be the best the society has ever held.

The number of members attending should be large as Buffalo is very central, and we are assured of very low rates of fare on all the railroads. The full programme of the meeting will be published not later than July 1. Members are reminded that the dues this year are advanced to \$3, which amount may be forwarded to the secretary at any time.

The secretary's address at convention time will be Tift House, Buffalo, N. Y.

WM. J. STEWART, Sec'y, S. A. F.

New York Notes and Comments.

A new florists' store on a prominent New York thoroughfare has a neat sign in the window bearing this legend: "12 Roses for 50 cents. You can pay \$1 for the same, but the quality will be none better." There is a slight flavor of the dry goods trade about this sort of placard; of course it is perfectly legitimate, but still it is a thing we should hardly care to see carried out very much, or viewed with much favor. If it ever becomes popular, we may next expect to see among the florists' signs reading thus: "Extraordinary bargains in hyacinths," "Bankrupt stock of Easter lilies to be sold below cost," or "Great values in Mermets—must be sold." This would be likely to live up trade wonderfully. But it is noticeable that few of the leading retail florists try to do much advertising, trusting to gain new patrons through their regular customers. Even the sending out of a monthly circular is viewed with disfavor by many, especially during the dull season, when prices quoted must necessarily be low.

The annual influx of spring outdoor stuff is affecting prices as usual; it seems to be so largely used now. Weigelia, mock orange, outdoor lilac and pæonies are much liked; they can all be used in decoration with much better effect than finer flowers. The large pink pæonies are specially to be admired, but of course they are cheap and lessen the demand for finer stuff. A few flowers of the tulip tree (Liriodendron) are to be seen on the street, also Magnolia glauca, but the favorite wild flowers seem to be the marsh buttercups, which are always sold by the bushel, and the pink azaleas, usually sold

under the name of honeysuckle. These wild flowers are to be seen in some of the florists' stores, but a good many do not care to handle them.

Will there be so many bulbs grown next winter as before? Certainly during the past season the returns were not such as would create many millionaires among bulb growers, and they all gave the impression that they were forcing bulbs simply for love of humanity and the commission men, without any thought of filthy lucre. The preceding year returns were so poor that most of the growers talked of withdrawing. They did not, however; it looks as if each and every man planted an extra batch, under the impression that the other men wouldn't attempt it at all; consequently the crop was large, the demand small, and the profits might be represented by a minus sign. Lilies will always be in vogue, and there must always be a demand for Roman hyacinths, but tulips have seen their best days, and Dutch hyacinths are not wanted at any price. The blue Romans seem to be but little grown now, but Mr. Klunder says he regards them as very useful; they give a tint very difficult to obtain in cut flowers, and possess the gracefulness so conspicuously lacking in Dutch hyacinths.

The need for a standard of size in tuberoses bulbs is mentioned by "A. C." in the last issue. A similar reform seems needed in Dutch bulbs; many were the complaints last winter of their decreasing size, especially in the case of Romans, as the price of the bulbs was advanced, while the price of the flowers was lessened it seemed rather rough on the growers to be compelled to take smaller and weaker bulbs, which as a rule, only produced one good spike. Some of the growers complain that while the demand for Dutch bulbs has increased, the quality has decreased. The only remedy is an organized effort to fix a certain standard of size and consequent rating, and the growers are certainly strong enough to do this.

The Rock rose (*Cistus*) is an English favorite which is now being tried here; some plants were noted at Henderson's. A pretty thing too; is it going to be a success in our climate? So many of the European favorites fail in our hot dry summers.

Among Mr. May's roses was a climbing Bride, it seemed to be reaching along like a Marechal Niel, and made a very pretty graceful plant. Presumably such a variation would be permanent, and it would make a handsome plant where space was no object.

Prospects are very good for Decoration Day, although a good many misguided people go in for abominations in colored immortelles, indications point to a very large trade in pot plants. The increasing demand for pot plants, as well as loose flowers, is noted at every holiday.

What has become of the grand strains of verbenas we had a few years ago? It is a fact that we rarely now see such fine plants as formerly—it may be the result of constant rust. Properly grown, pinched off or pegged down to form a regular mat of bloom, the verbenas are one of our showiest bedding plants. But is not so well grown as it used to be.

EMILY LOUISE TAPLIN.

Boston Notes.

The May Exhibition of the Massachusetts Hort. Society was, as usual, very attractive. The display of pansies was excellent, particularly those shown by D. Zirmgibel. Kennett Findlayson showed nine calceolarias that would be hard to

beat. Some good calceolarias also came from Wm. Martin. Mr. Martin also had a fine specimen plant of azalea, Glory of Sandrigham. J. H. White's exhibit included some good gloxinias, and a fine plant of rhododendron, Duchess of Cambridge.

The only orchids shown were from C. M. Atkinson, but these were all good. A pretty cypas shown by Mrs. A. D. Wood, said to have come from Demarara, was noticeable for its beautiful foliage and from the fact that nobody could be found to name it.

The collections of native flowers from Mrs. P. D. Richards and E. H. Hitchings were very complete, and seemed to attract as much attention as the cultivated varieties. First and second prizes for baskets of flowers were awarded to Mrs. A. D. Wood and Mrs. E. M. Gill, respectively.

The azaleas at the Hunnewell place are in their prime, and are well worth a trip to see. The rhododendrons will be in bloom about ten days later. Mr. Harris has been very successful with his orchids this season and now has a large number of fine varieties in bloom. The conservatory is a perfect blaze of calceolarias, roses, pelargoniums, standard wisterias, fuchsias and genistas.

Ned Hatch, the auctioneer, had a picnic recently at his summer cottage at Scituate. A number of congenial spirits among the florists were invited, and, judging from the fabulous tales they tell, they must have been royally entertained.

At the May meeting of the Gardeners' and Florists' Club, the secretary, J. J. Cunningham, gave an interesting account of the construction and decorative features of the new Back Bay Park. The annual excursion is one of the subjects assigned for discussion at the June meeting.

Sam'l Hatch & Co. and N. F. McCarthy are running the plant auctions with great vigor. These sales are held Wednesdays and Saturdays, and the number of plants thus disposed of is almost beyond belief. The prices obtained are in the main good.

W. E. Doyle has been making great improvements on the old Hovey establishment. New houses are taking the place of the old wrecks, and they are filled with a choice and rapidly growing collection of decorative plants.

Temple & Beard, Shady Hill Nurseries, report an enormous trade this season—much larger than ever before. There is plenty of room for such a nursery business as they seek to establish, for New England trade, the field being a good one, and entirely unoccupied as yet.

The market continues somewhat depressed, owing to the overstock of cut flowers.

When June comes in the florists will find enough to do, between the June weddings and school graduations, but just now there is a lull, so that they find time to go once in a while to the base ball game, and to the auction sales, to visit their neighbors, and buy an occasional Louisiana lottery ticket. Some of them seem to have phenomenal luck in the lottery line.

Norton Bros. have sold the mammoth *Dendrobium nobile* to F. Sander & Co., and it has gone to grace Mr. Fosterman's new houses at Summit, N. J.

Jackson Dawson has been divested of his whiskers. He looks twenty-five years younger, and is entirely too handsome to be allowed to go out alone.

Wm. Hamilton, superintendent of the Allegheny Parks, has been visiting the Hub for a few days. W. J. S.

Long Island Plant Notes.

BY WM. FALCONER.

MAY 15TH.—Trees, shrubs and hardy herbaceous plants are now in the same condition, so far as time of blooming and advancement of growth are concerned, as they were on the 27th of May last year.

THE FLOWERING DOGWOOD in the woods was never finer than it is this year.

PLANT GLOXINIAS in a cold frame as you would violets or pansies and keep them shaded from sunshine.

TREE PÆONIAS are now in full bloom, and how magnificent! They "live forever," are hardy and at home in any garden.

DAVID ALLAN tells me he had a large lot of pæonias and he lifted and forced them and had them in at Easter. Nothing forces better. But for this purpose use the herbaceous and not the tree pæonias, the latter are too high priced.

KALANCHOE CARNEA has come up well from seed and I am favorably impressed with it.

SOLANUM JASMINOIDES GRANDIFLORUM is something you should have. And plant it out in summer in a warm sunny place and feed it well and grow it well; if young plants fail to bloom freely the first year, cut them back and lift and pot them next fall, winter them in a cool house and plant them out again next summer. Old roots always bloom better than young ones.

OSTROWSKIA MAGNIFICA sown in February hasn't come up yet.

BEGONIA SCHARFFII, page 478.—I bought a packet of seed and sowed it—well, I shook the paper over the soil in the seed pan, for I didn't see the seed; this was three months ago, but nothing is in sight yet.

CANNA EHEMANNII.—Notwithstanding the vast quantity of it grown during the last few years it is still very scarce.

COBÆA SCANDENS ALBA.—I didn't know I had in this plant such a wonderful novelty till I read about it in the European papers the other day.

WHEN THE Japanese hop vine (*Humulus Japonicus*) came out some years ago every seed I sowed grew; last year I bought and sowed some more of it, and only part of the seed grew; this year I bought a few more seed of it and sowed them, but not one has germinated. Guess the original stock of seed will soon be exhausted and then we may get some fresh seed that will grow. But it doesn't matter much, it is little better than a weed of a vine anyway.

ARUNDO DONAX.—Winter before last a good deal of it got winter-killed, but what remained grew bravely during summer; last winter, however, didn't hurt it a bit, and it—both plain green and variegated kinds—is coming up very vigorously. It grows 18 feet high with us.

A HANDSOME GRASS BED.—We have a bed of hardy grasses and which looks very well in summer and fall. At back is *Aruno Donax*, next the zebra-leaved eulalia, then the plain green leaved eulalia, and the variegated-leaved eulalia with *Briza maxima* and feather grass in front. The variegated arundo, gymnothrix, erianthus and some other large grasses are used on the flanks, and I raise a lot of *Pennisetum longistylum* from seed every year to fill about the front.

ANEMONE SYLVESTRIS is blooming freely with me both in the open border and a half-shady place bordering a white funkia bed. Its flowers are white, fra-

SAXIFRAGA CAMPOSI (SYN. WALLACEI)

grant and nearly as large and showy as those of the Japanese anemone, but not produced nearly in such abundance. A native of Siberia and Central Europe, perfectly hardy and a neat and good perennial. Two years ago I raised about a hundred plants from a six cent packet of seed.

HYDRANGEA PANICULATA GRANDIFLORA.—If you want large clusters of flowers next fall your plants should be headed hard back, and even then the young shoots thinned out. And remember that now is the proper time to propagate this hydrangea from cuttings of the young wood.

LILY-OF-THE-VALLEY is now in prime condition with me out of doors. I grow it behind our azalea bed, a belt of it about 150 feet long by 6 feet wide, and on good land that is moderately high and dry, open but sheltered and sunny, and every fall I topdress it with a one to two inch coating of fine, rich manure and let it stay there next year. Here I get all my supply for forcing, and better I know I can not import. In September I get a lot of boxes, 5 to 6 inches deep, together and take them to the lily patch and fill them. I dig up clumps of the stoutest crowns, shake the loose dirt away from them and then and there plant them closely into the boxes. The boxes are then brought back to the frame ground, watered and set closely together till December and they have had a fair freezing when I begin introducing them for forcing. The trouble with this lily patch is that it often gets too dense, and to avoid this the heavy annual cuttings for forcing purposes do it good.

AZALEA AMÆNA.—Never in indoor cultivation have I known this little evergreen to flower as freely as it does when grown as an outdoor hardy shrub. It

was in its finest estate with us about May 13th. Hardy around New York and southward. We have in one row 125 plants and although on high, dry land but sheltered by neighboring trees, they seem to be perfectly hardy here.

AZALEA OBTUSA is of the style of growth of *A. amœna* and in bloom at the same time. It thrives well and blossoms in the greatest profusion with us as a hardy shrub and is the brightest colored of all our azaleas. Parsons says "bright scarlet," well, I'll stop at bright crimson. But it isn't reliably hardy as far north as New York. Mr. Trumpey, under date of the 15th inst (May), writes me. "It (*A. obtusa*) is hardy in sheltered places, but not so hardy as *A. amœna*. We have it in flower now, but often it gets killed down to the snow line."

THE GHENT AZALEAS although hardy enough, love shelter from biting winds in winter; our plantation of 2,500 plants shows this very plainly. The northwest corner is exposed to the sweeping winds in winter, and as a consequence the plants are less thrifty than they are at the other end which, although as high, dry and open, is protected against cold winds by contiguous evergreens.

AZALEA MOLLIS has the largest and showiest blossoms, but unfortunately it isn't very hardy. An excellent shrub for pot culture and forcing. Although yellow is the prevailing color, we now have got some handsome shades of orange and flame colors.

ABOUT FORCING azaleas I must be candid: Ghent and mollis azaleas can be forced with the greatest ease, particularly for late winter work, but they are expensive to begin with and I do not think as permanent and serviceable for cut flower florists' business as the popular varieties of *A. indica* are.

HYBRID AZALEAS.—Of recent years some propagators have crossed the mollis and Indian azaleas and raised a handsome race of plants which, although not as hardy as the mollis proper, are excellent for pot culture and forcing and present a large variety of showy shades of yellow and red. There is a flowing freedom about these mollis hybrids that we seldom find in evergreen forms and which is very pleasant and the smallest plants blossom.

RAISING SEEDLING AZALEAS.—Give a florist a coleus, a pelargonium, a rose or a chrysanthemum that he can grow and propagate at lightning speed and he is happy, but the idea of raising azaleas from seed and growing the young plants along for three years before they are salable is most enough to frighten the stoutest of us. At the same time it will pay a painstaking man interested in this line, but never a dash-along careless man.

THE ADVANTAGE of seedling azaleas over grafted plants is their more vigorous constitution, and this is especially true of the whole rhododendron race. They root better, grow better and are hardier.

Saxifraga Camposi.

This is also known in gardens as *S. Wallacei*, and is certainly by far the most beautiful of the mossy section, not even excepting *S. decipiens* and its near ally, *cæspitosa*. As an edging it is simply faultless, growing closely, and producing its large white flowers in the greatest profusion. As a pot plant liberally treated, I have rarely seen its equal. I find it extremely useful for cold houses, corridors, or windows. Of course, like most of this section, the leaves become brown and dried up as the stem lengthens, but the shoots are as readily rooted as those of a geranium or calceolaria, and do not want even the protection of a handlight, but may be pricked out in a shady place in the open air and watered occasionally until rooted. By the latter end of autumn they will have made nice plants, and may be potted up for blooming in pots or planted out where required. It is perfectly hardy, and the engraving here given shows what a useful subject it is for the rockery. A native of Greece. —D. K., in *London Garden*.

Arboretum Notes.

The first great burst of spring bloom at the Arnold Arboretum has already passed. Forsythias, Magnolias, Prunus in its many showy varieties, flowering currants and most of the Pyrus are already denuded of their flowers. Among the most effective and popular of the spring flowering shrubs are the lilacs. There are about fifty species and garden varieties in this collection and a large proportion of them are now in bloom. *Syringa Chinensis* is one of the most beautiful and is seen in many shades of color, var. *alba* white with a pale violet eye showing trusses from ten to fifteen inches long. *S. Persica pteridifolia* called the fern leaved variety has handsome finely cut foliage. *S. pubescens* is deliciously sweet, resembling in fragrance the *Daphne*.

One *Prunus*, *P. Cerasus ranunculiflora* is still in bloom, being a very late variety and specially valuable for this reason as well as from its very large and double pure white flowers.

A fine specimen of *Exochorda grandiflora*, one of *Cornus alba*, also a large *Illesia* (Silver Bell), all loaded with white flowers form a beautiful picture.

Many of the *Loniceras*, or honey-suckles are now in full flower. Among the prettiest are *L. nigra*, *L. Tartarica*, in many forms, and *L. Morrowii*, a rare Japanese species with white flowers and exceedingly handsome.

The *Viburnums* are just coming into bloom. One of the best, *V. plicatum rotundifolia*, is highly recommended by Mr. Dawson for forcing. The flower heads are not so large as in some other kinds, but are produced in great quantities. This variety is not quite hardy here.

There are in the Arboretum about forty varieties of *Spiræa*. *S. cana*, a very pretty species, is now in bloom and many others will soon follow. The evergreen *Daphnes*, including the popular *Cneorum*, *Genkwa*, a lavender colored species from Japan, and *alpina*, lemon white from the Swiss Alps and the *Ledum latifolium*, or Labrador Tea, which is also an evergreen, are all in full bloom.

Of the *Berberis* there are about forty varieties in the beds, some of them quite rare. Among the prettiest are *B. Sieboldii* and *B. Thunbergii*, the latter blooming while last year's red fruit still hangs on the branches.

The *Staphylea colchica* ought to make a desirable forcing shrub. The blooms are white, of good size, in large racemes and would be useful as cut flowers in winter.

The *Caraganas* are all ornamental, both in their flowers and in their fine acacia-like foliage. Those flowering now are *C. Chamlagu* with odd pale yellow colored blossoms, and *C. frutescens* whose flowers are of brightest yellow.

Cytisus purpureus is a low growing shrub bearing handsome, rosy lilac flowers and is admirably adapted for rock work. One of the most effective shrubs now in bloom is *Rubus deliciosus*, a variety from the Rocky Mountains having pure white flowers, three inches across and resembling in form the Cherokee rose. Another good white flower is the *Rhodotypos Kerrioides*, a native of Japan. One of the most beautiful spring blooming shrubs recently discovered is *Rhododendron Vaseyii*. The bright rosy flowers are very effective. The first wild roses are just beginning to expand (May 17). W. J. S.

THE PRIZE OF \$100 for the best herbarium of native plants collected from August, 1888 to August, 1889, offered by Peter Henderson at the New York convention, should not be overlooked. At this time a large number of plants may be collected to advantage. It is to be hoped that the competition will be sharp, and that the study of botany by those in the trade will receive a strong impetus therefrom. Competent judges will make the award at Buffalo, in August.

SUBSCRIPTIONS for the AMERICAN FLORIST may be left with any of the following:

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

V.

Something to show me, have you? Very well, lead the way.

What it looks like? Why, it looks to me very much like the remains of a once thrifty rubber tree. Right am I?

Property of the old spinster Rachel Schuckers is it, and she sent it to you to have it kept under glass for a month or so until it had recovered its health and got rid of its decidedly bilious complexion.

And now the old lady threatens suit for twenty-five dollars because it has died on your hands.

I wish you joy. They say that no one comes into contact with Miss Rachel Schuckers without longing for the asbestos overcoats worn by Messrs. Mesbach, Shadrack and Abednego. Excuse me, I didn't mean to gloat over the misfortunes of a fellow man.

Like to hear something about the law of the matter. Good. That's spoken like a sensible man.

Make this a rule of conduct: Never "law away" a single dollar simply because your opponent is surly, ill-mannered and bad tempered.

Now as I understand you, this shrub was delivered to you as a man skilled in the care of plants, thoroughly instructed in the art of developing and encouraging such plant life as is used for decorating and beautifying the interiors and exteriors of human dwelling places. You accepted this "trust," for such it was, and whether you so stated or not you guaranteed to Miss Rachel Schuckers that you would by the use of your glass house in connection with a higher and moister atmosphere do all that man could do to revive and strengthen her rubber tree. Even more than this, your implied contract called for the most skillful watering, spraying and general care.

This is what the law calls a "contract of bailment."

Not use words you don't understand? Don't be too sensitive. I'll make myself clear, and in order to do so I'll now proceed to quote a few words from the writings of my learned ancestor, Sir William Blackstone.

Says Sir William: "A bailment is a delivery of goods in trust upon a contract that the trust shall be faithfully executed."

Now, there are several kinds of bailment contracts, to which I propose if you will kindly stop rattling those pruning scissors, to call your attention in order that you may be the better able to understand the particular kind of contract which you have made with Miss Rachel Schuckers.

The very simplest kind of bailment and one occurring every day of our lives is "deposit," as when you entrust a chattel to some one's care with his consent, for keeping which he is to make no charge.

I need scarcely say that in such cases all the law requires is that the "bailee" or person undertaking the charge should take as good care of the deposited chattel as he does of his own. No more, no less.

Another kind is this: You say to me, "You are going to Squire Blinks, please hand this box of roses to Mrs. Blinks." I accept, but Mrs. Blinks happens to be out and I deliver the box to a servant who, although warned by me to put the box in a cool place, lays it down near the kitchen fire and the roses are ruined. Here you would have no redress against

me. I executed the contract reasonably well. You should have sent your boy with orders to deliver to Mrs. Blinks or bring them back.

Still another kind of contract: You loan me your horse to take a drive. At the end of my journey I give him water when he is overheated and founder him. The law holds me responsible. It was a "gratuitous loan" and I was called upon to use the horse with extraordinary care. It will not help me out to assert that I had often done the same thing with my own horse.

You will notice that thus far I have only mentioned contracts which call for no hire or reward. The very instant the element of pay enters into a contract all is changed.

Take for instance the contract under which I deliver a piece of cloth to a tailor for him to "make up" for me. The implied contract in this case calls not only for requisite skill on his part in cutting, fitting, etc., but also for extraordinary care in the preservation of the cloth from injury, fire or theft. Nothing will excuse him except so-called "acts of God" or public enemies—that is earthquakes, cloudbursts or in case the town was destroyed in time of war.

A person entering into any such "contract for hire," such as those made by a skilled artisan, a common carrier, etc., must be responsible within the scope of his employment. He can't plead the "baby act." What I mean by that? Why, hang out a sign: "All Goods Left at the Owner's Risk."

Yes, you are right. There are some exceptions. For instance, the law now excuses a hotel keeper from this old common law responsibility, provided he puts a safe in his office and gives notice to his guests to deposit their valuables. But a man can't "deposit" his trousers in this iron chest and when this useful garment is found missing in the morning the hotel man must pay up and look as pleasant as possible.

Now, we are in a position to take up your particular case—your contract with Miss Rachel Schuckers. The only question for us to determine is: Have you faithfully performed your trust? If this matter is carried into court and Miss Rachel Schuckers shall be able to show that you accepted this trust without having had any experience in the care of such shrubs, that you watered it too much, gave it too much sunlight or treated it in such an unskillful manner as to kill it, why there will be nothing left for you to do but try and get the money back by a more stringent economy in your household expenses for a few months.

Adam, the first of all gardeners, could have done no more you say?

Good. I believe you. I feel quite certain that you will be able to show that Miss Schucker's rubber tree was "hurt past cure" when it came into your hands.

But one word before I go. In making contracts of any kind, especially when there is the slightest chance for complications or misunderstanding, see that you have a witness to the conversation. Call attention to the condition of the plants and specifically undertake to do no more than you are sure you can perform.

The law holds a man down to his declarations. Therefore be careful. If you have any cause to be suspicious specify in your receipt for the goods what you undertake to do.

The law is fond of emblems. They are very useful too. Take for instance the seal. No deed or mortgage of real estate

VIEW IN THE CONSERVATORY AT FOREST HILL CEMETERY, UTICA, N. Y.

is valid unless the parties executing it set their "hands and seals" to it. This is an important matter; possibly not just at present, but in years to come when you become rich and hold a great deal of real estate it will be well for you to recall this conversation.

Accept no deed or mortgage not executed under the hand and seal of the grantor, which seal should be a round or diamond shaped piece of paper fastened to the instrument by gum or wafer or else a genuine seal, that is, an impression of a carved seal stamped on soft wax. Of course the law varies. In some states only a "scrawl" is called for. A "scrawl" is made by writing the word "seal" and enclosing it within a square or diamond.

You say: How about a corporation? Good. I'm glad you reminded me of corporate seals. Very few people have an idea how a corporate deed differs from a private one. First, the corporate seal should be impressed, not merely fastened by gum or wax, upon the paper of the instrument; and next, the certificate of the notary should not only set forth that the officer executing was personally known to the notary and known by him to be the officer of the corporation, but also that he (the notary) duly examined such officer who stated that the seal was the corporate seal and was affixed by order of the corporation. You see how particular the law is.

When a man can't write his name the cross must be set as an emblem thus: William (his X mark) Stubbs, and Stubbs must lay his finger on the end of the pen while you make this mark of the cross. Such a signature must always be witnessed.

Now, there is another important "emblem" to which I desire to call your attention. The emblem of cancellation. Usually this emblem consists of two or more lines drawn by a pen and ink through the word or words to be cancelled. In deeds, mortgages, bonds, etc. all cancellations must be noted by the notary as having been made "before execution." Always insist upon this. The law pays no heed to cancellations made in pencil unless of course the instrument itself be wholly written in pencil. When you take up any note, bond, mortgage, etc. don't content yourself with merely drawing your pen through your signature. Destroy the signature utterly.

You ask me what the letters ss stand for in affidavits and acknowledgements. They stand for the Latin words *scire licet*, "it is lawful for you to know." It's a bit of the old Law Latin and I don't think the omission of these letters would do any harm to a legal instrument.

You must understand that in the administration of the law nowadays judges strive to do substantial justice and refuse to give weight to technical objections unless absolutely necessary. This is most praiseworthy. To make a man begin all over again simply because the notary neglects to date his certificate when a plaintiff swears to a pleading, is not justice. It is the travesty of justice. However, always be on the alert. It is better to be overcareful than to go into court and ask to be excused for making a little slip.

An omitted dollar mark would not invalidate an instrument. It would be within the power of the court to allow

you to prove by outside evidence that "600" meant \$600. The law strives to get at the intent of the parties. So, too, in books of account when put in evidence, the mere misplacement of a debtor or creditor mark ought not to be allowed to work injury to anybody. Nevertheless be exact in small things. It pays to keep your wits about you.

Postmarks often become very valuable pieces of evidence, especially when you are called upon to show when a notice of protest, notice of meeting of creditors or any notice of a thing or things to be done, was mailed. Therefore never destroy an envelope. File it with the letter.

For instance, suppose you receive a check from Doe, Roe or Hoe in payment of a bill of merchandise. You pass it through your bank and it comes back stamped "no funds." When brought to his attention Doe, Roe or Hoe takes the position that he had a balance, but that you carried the check in your pocket for several days and hence must suffer the loss of your own negligence. Now you see how important a point it becomes to show on what day you received the check, for possibly there was no letter of advice covering it, or merely a "mem" without date.

In making up accounts be careful how you make use of the ditto mark. Be explicit. Make yourself plain even at the risk of taking the polish off your style.

The law dislikes abbreviations. Spell words out. Don't put 1 M for 1000. In your business especially there should be no contractions in your invoices and statements. You may know that "1 d. chrys." stands for "one dozen chrysan-

themums," and "I d. jacs" for "one dozen Jacqueminots," but you don't make out bills for yourself. You make them out for strangers and the older you get the more you'll understand that when men pay out money they want to know what it is for. The days have gone by when men were so honest that no "scraps of paper" were necessary to be exchanged. But really it is not a question of honesty. **UNCLE BLACKSTONE.**

First Mention of Moon Flower.

I think Mr. Henderson must be mistaken when he says he has used the name Moon Flower in his business years before 1881. I have referred back to his catalogues to 1859 and find no reference to the plant under that name. His first mention of the plant is in his seed catalogue 1872, under the name "Ipomæa Bona-nox, violet, West Indies." In 1875 and after, it has the prefix "Evening Glory." In 1860 B. K. Bliss just catalogued it under Bona-nox, white, and I. grandiflora, large white. Washburn & Co. in 1866, and onwards; and Hovey & Co. of 1868 in their seed catalogues of the times give the English name "Good Night." C. L. Allen, 1869, has Nil. grandiflora and Bona-nox, both credited as West India productions. Hovey & Co. of 1870 gives "Grandiflora, fragrant, white, six inches in diameter." All of which tends to show that as you remark in the last number, catchy, popular names with printer's ink is the thing. For here we have seedsmen cataloguing for years a plant, or plants, attracting no attention, but when it comes out with a flourish in seed catalogues as "Bona-nox," or "Evening Glory," or "Good Night"; in plant catalogues as "Noctipbiton," "Evening Glory," or "Moon Flower," for years, until this year of grace it settles down placidly in both seed and plant catalogues as *Ipomæa grandiflora* as the "Moon Flower," "Evening Glory," or "Good Night" in English. Why, the name's the thing; and if people will not buy without, they must be tickled until they do, even if the plants are naughtily mixed up in names. **EDGAR SANDERS.**

Storing Pots.

How the empty pots do accumulate now during the bedding season! And alas how many of them are broken at this time by being carelessly piled! While you may be unable at this season to secure additional competent help to assist in bedding you can easily secure the services of a boy or boys to gather up, sort over and store away the pots as they accumulate, thus saving a great deal in breakage as well as getting them out of the way of your men.

Undoubtedly the best method of storing empty pots is that practiced by Peter Henderson & Co. They are packed into soap boxes, a strip being tacked on each end so that the boxes do not set tight together, and the boxes piled, all containing one size of pot together. In this way the boxes and not the pots bear the weight, and the pots themselves are not handled again until used, as they can be carried right in the box where desired. By this method much rehandling—entailing labor and breakage—is avoided, and the expense is slight.

We believe that the universal adoption of this method of storing pots would save thousands of dollars to the trade annually, and any method which will aid in reducing expense of production is certainly worthy of consideration in these days of sharp competition in plant growing.

Hydrangeas for Easter Plants.

The popularity of the hydrangea as an Easter pot plant continues unabated and in fact may be considered on the increase, and a few cultural notes obtained from Mr. W. K. Harris, the well known and very successful Philadelphia grower, will undoubtedly be welcomed by many.

To secure a plant in an 8-inch pot for next Easter the young plants should have been propagated in February. Plants propagated in June will make good plants in 4 and 5-inch pots for next spring's flowering, but it would be a little difficult to get them in for Easter, as that holiday comes about a month earlier next year than it did this. And with plants propagated so late it is difficult to get the wood sufficiently ripened to flower at Easter. These late propagated plants should be grown on under glass all summer in order to get sufficient growth on them.

Plants propagated in February are grown on under glass until May 1, or a little later, when they are plunged outside in frames in spent manure or hops, and kept well watered. They need but little care except watering until the early frosts in the fall. When frost comes cover the frames with sash, ventilating freely and entirely removing the sash from the frames during the day when weather permits. The object is to thoroughly ripen the wood which must be done to ensure flowers. Plants that may be apparently very well grown, but which have not had the wood sufficiently ripened, will not set flower buds.

Before severe cold weather sets in remove the plants to a cold house. The plants will by this time have cast their leaves. They should be watered sparingly, taking care not to overwater, but at the same time not allowing them to become quite dry. This is the critical period, as upon careful treatment at this time depends the flowering of the plants. Previous to being shifted into 6 inch pots the plants should be topped to make them bushy. The plants should never be crowded at any period of their growth, as if once drawn they will never make shapely plants.

The plants should be placed in a warm greenhouse about ten weeks before the date at which you want them in bloom. For the first two weeks the temperature should be about 50° to 55° at night, increase to 60° to 65° for the next four weeks, and to 65° to 70° for the remaining four weeks. When in heat hydrangeas are very subject to red spider and should in consequence have frequent and hard syringings during that time, especially when in the higher temperatures. The plants should begin to show flower buds prominently in four to five weeks before the date they are wanted, and as buds begin to show the growths should be staked into the shape you wish the plant to be when flowered.

Hydrangeas require plenty of room in order to make a shapely plant, and they should never be crowded. When in an 8 inch pot each plant should have a space of about fifteen inches square, in fact they should be given this space as soon as staked. As this room is occupied at a season when it is not required for bedding plants it can the more easily be afforded.

The secret of success in securing a large crop of plants in the same state of development at a given date, such as Easter, lies very largely in carefully and frequently sorting the plants, bringing into

more heat any which are lagging, and placing back into a cooler temperature any which are coming too fast. In fact from the time the plants are placed in heat they are moved continually. Too much care and attention can not be paid to this matter as upon it depends whether your crop shall be fit to place on the market at a time when you can easily sell all at good prices or at a time when there shall be but a limited demand at lower prices.

At the Easter season but a short time past, well bloomed hydrangeas sold in Philadelphia at wholesale in 8-inch pots at \$12 per dozen, in 6-inch pots at \$6 per dozen. Such a crop brought in at the right time is a very profitable one, especially as the houses are cleared out at such an early date, that the space can be utilized for bedding plants, thus securing a double crop from the same space.

Hydrangea Otaksa is the kind most largely grown for the purpose.

Plant Notes.

ROSE MADAME LAMBARD.—Dudley & Sons, of Parkersburg, W. Va., complain that the buds "rot off without opening during cloudy weather." Think it best for outdoor bedding.

CHRYSANTHEMUMS.—I would like to ask chrysanthemum growers which three varieties they would select if confined to three kinds, one white, one pink and one yellow? **L. LINEGAR.**

Cairo, Ill.

ABUTILON GOLDEN FLEECE.—This is probably the best yellow abutilon for a market plant. It makes an exceedingly compact well shaped pot plant, the yellow blooms are of good size and very freely produced. It is also excellent in the fall and winter.

GERANIUM WHITE VESUVIUS.—I would like very much to know the origin of the geranium White Vesuvius. Is it a sport? I have one that has one branch bearing bright orange scarlet florets and pure white ones both in the same truss; also some florets part white and part red.

A. S. PARSON.

OLD YELLOW PINE FLOORING which can frequently be obtained where buildings are being torn down makes one of the best materials for the bottoms of greenhouse benches, and at slight cost. Being old and thoroughly seasoned, with an occasional coat of whitewash it will outlast almost any other lumber.

NARCISSUS POETICUS DOUBLE.—Replying to our correspondent Aug. S. S., we would say that the true form of *Narcissus Poeticus* double is no longer in the trade. The variety *Alba Plena odorata* is sometimes called Double Poeticus, but it is not and has not the markings of that sort.—**ED.**

SOIL.—Too many florists make no provision for protecting their soil pits from the weather. A cheap roof over them costs but little and is more than a convenience. The soil is then in condition for use in all sorts of weather, and there need be no delays in filling benches owing to the soil being too wet to handle conveniently. It is attention to such details that reduces the running expenses of greenhouses and that assist materially in increasing the profits.

CÆLOGYNE CRISTATA

Cælogyne Cristata.

The engraving is from a photograph of a grand specimen plant of this very useful orchid in the collection of Mr. Erastus Corning, Albany, N. Y., which at the time it was photographed had open 608 flowers on 112 spikes.

The value of this orchid to florists for the production of cut flowers has been frequently noted in these columns, and it would seem that nothing could be more convincing of its free blooming qualities than our illustration. But of course it should not be overlooked that the plant is a large specimen, bloomed under the most favorable conditions and that the care and skill of one of our ablest orchid growers have been lavished upon it.

We are indebted to Mr. F. Goldring—under whose care the plant is—for the photograph from which the illustration is engraved.

White-Flowered Cinerarias.

Those who grow extensively for sale are well aware that there is by far the greatest demand for white flowers, and at no time more so than at Easter. There are also a considerable number of private gardens where there is a great need for white-flowering plants. In either case any addition to the number of species or

varieties of white-flowered plants is heartily welcomed, and for this reason I venture to call attention to the merits of white-flowered cinerarias. As yet English raisers do not appear to have been successful in raising and fixing the strain of a really good white variety, or it may be they have not attempted to do so, and it has been left to a Paris firm of seedsmen, Messrs. Vilmorin-Andrieux & Co., to take the lead in this respect. Judging from what I have seen of their strain of white cineraria, it is a thoroughly good one and likely to become very popular. The plants are of good branching habit, the flowers medium-sized, well formed, the florets being pure white and the disc of a bluish tint. So much do I value the strain that I intend to grow it extensively for next winter and spring decoration, a band of it fringing a mass of mixed colors being certain to attract admiration. Good white cinerarias are to be met with among English strains, but they are comparatively scarce and are apt to become finely edged with color, all those we possess having quite recently changed in this manner. I am only too well acquainted with the fact that single cinerarias are not serviceable in a cut state, but I have noticed that the white forms when used in wreaths last quite long enough, and

are very "taking" in appearance. In this district pot plants of a white or nearly white variety sell readily at Easter for church decoration, and are appreciated at any time. Double cinerarias, though less beautiful, are more durable in a cut state, and I have good reasons for asserting that the time is not far distant when a good double white variety will be available for general cultivation, perhaps raised from seed, and most certainly by the method of propagation by suckers.—*W. Iggulden, London Garden.*

Market Geraniums.

A large Philadelphia grower of market plants finds that the following kinds of geraniums are the most valuable for that purpose.

White Swan, double white; Fairy Queen, double pink; Queen Olga, single pink; La Pilote, double scarlet; Bruanti, semi-double bright red; Mrs. Hays, double delicate pink; Baron Duranteau, double rich velvety crimson; S. A. Nutt, double dark crimson; Cygnet, single white; Alphonse Daudet, single salmon pink.

BEGONIA AMELIE BRUANT will probably be of considerable value as a market plant. It is in the way of Sandersonii but better as a market plant.

News Notes.

FRANKLIN, PA.—Jos. Molck & Co. have started in business and built a house 100 x 30.

SPRINGFIELD, MASS.—Miller Bros. have left the employ of N. J. Herrick and opened a flower store.

MARION, IOWA.—I. N. Kramer & Son lost 6,000 feet of glass by hail on the morning of May 16. No insurance.

ABILENE, KAN.—Mrs. S. H. Bagley's place was struck by hail May 16; 1,300 feet of glass and many plants were destroyed. No insurance.

BONNER SPRINGS, KAN.—A severe hail storm struck H. H. Kerns' place on May 23. Almost his entire stock of plants and a large amount of glass was destroyed.

NEW YORK, MAY 18.—The market is loaded with flowers. Roses sold to-day at from \$2 to \$4 a hundred, and in large lots as low as \$5 per thousand. The weather is that of August rather than May and many people have left town for summer resorts earlier than usual in consequence.

FLOWER FESTIVALS were held at the following points: Atlanta, Ga., May 14, San Jose, Cal., May 8, San Francisco, Cal., May 15 to 17, Little Rock, Ark., May 17, Erie, Pa., May 22, New Britain, Conn., May 21. The San Francisco Show was an excellent one. The display of rare palms and ferns being one of the finest ever seen on the coast.

THE Connecticut Valley Florists' Club, with headquarters at Springfield, Mass., was organized April 17 with C. E. Clarke president; Adolphus Mieliez, vice-president, and W. F. Gale, secretary and treasurer. All florists and gardeners in the valley are invited to join. Meetings are held on the first and third Monday evenings of each month, at 8 o'clock.

MILWAUKEE, May 24, 1889.—A hail storm visited Oconomowoc, Wis., two days since and smashed the greenhouse and plants of Mr. Sylvester. He has sent for the blanks of the Hail Insurance Association. J. T. Bartlett, who has his glass insured escaped. Moral, insure your glass against hail.

C. B. WHITNALL.

PHILADELPHIA.—A recent wind storm did some damage to florists here; at Mr. Edwin Lousdale's place at Chestnut Hill the windmill was blown over on to a greenhouse and damage was done at other places. Mr. D. D. L. Farson, secretary of the Pennsylvania Hort. Society, has been appointed superintendent of Horticultural Hall also. Mrs. Robert Craig is quite ill. Spring plant trade opened with a rush and bids fair to exceed that of previous seasons. Cut flowers are very plentiful and prices consequently low.

Hail Notes.

Secretary Esler writes as follows: "The greenhouses of the Oak Grove Cemetery Company at La Crosse were hit by hail on May 17th. Loss slight. Insured in the Florists' Hail Association. Hail insurance is getting a boom. Applications are coming in faster now than at any time since our organization, which, by the way, is now two years old on June 1st."

By the way, how is it that some of the prominent members of the S. A. F.

WARDIAN CASE IN THE FORM OF A MINIATURE GREENHOUSE.

living at Lake Forest, who have attended most of the Annual Conventions and have often been offered Hail Insurance, are now keeping so still since the heavy hail storm at that point a short time since?

Chicago.

J. A. Schindler has built an office and show house 20x60 feet in front of his Marion Place greenhouse. F. Kirchoff will also build an office at his North avenue stand.

Mr. Alfred Edler has opened a retail florist store at 208 North State street.

Mr. J. A. Pettigrew, superintendent of Lincoln Park, has just completed a large house for aquatics, of which a large collection including the Victoria regia has been arranged for. The late improvements in this park would surprise the members of the S. A. F. who were so delighted with it two years ago.

Wardian Case in the Form of a Miniature Greenhouse.

The case shown in the illustration was used by Siebrecht & Wadley, New York, at their last orchid show for the exhibition of tender stove plants which are ordinarily injured by the exposure incidental to an exhibition.

A Wardian case of this kind is very convenient for a florist who keeps but a few stove plants, and there is an occasional demand for them from amateurs. The cost of cases of the style shown is from \$10 to \$25 according to size and finish, and should bring from \$25 to \$100 when filled with plants.

Dendrobium Wardianum.

A beautiful group of this charming dendrobe was recently observed in the rich and well known collection of W. S. Kimball, Esq., Rochester, N. Y. It was surprising to see even the smallest plants crowded with its noble and showy flowers, which clearly indicated its floriferousness when properly managed. Among this display a magnificent specimen was very conspicuous, carrying on long pendulous bulbs no fewer than 170 well developed blossoms; rarely is such an example with this number of flowers met

with, and Mr. Geo. Savage, the gardener, deserves great credit for the successful way he has managed this plant, which alone was well worth journeying to see.

Dendrobium Wardianum is one of the finest Burmese dendrobes and has been introduced some thirty years, but from that time until recently was only obtainable at a very high figure; latterly, however, large importations have been made and the price so reduced that it may be purchased by the humblest cultivator. Its blossoms make their appearance as early as November and December and where a number of plants are grown, flowers can be had right along until May or June. For cutting purposes it has already proved a valuable orchid and is rapidly gaining great favor with florists. The individual flower often measures four inches across and is of good substance, having broad white sepals and petals tipped with rich amethyst purple, the lip also is large and open, bright golden yellow, with two dark purple blotches at the base. They are borne in clusters, three and sometimes four together, on almost the entire length of the bulbs and remain four and five weeks in good condition on the plant provided a cooler temperature is given while in bloom. No one possessing a greenhouse having a temperature ranging from 60° to 65° at night with a day temperature of 70° to 75° should be without this orchid.

Its growing period is during the summer months, therefore the temperature named can be obtained with little difficulty. They succeed best in baskets or pans suspended from the roof of the house, in equal proportions of peat and sphagnum and good drainage. While growing they delight in light syringing overhead on bright days, which strengthens the growths and prevents thrips and other insects from making their appearance; after growth is fully completed it will then be necessary to remove them to a much cooler and drier atmosphere to thoroughly ripen them before flowering. The best season for potting is immediately after the blooming season is over, before new roots present themselves, otherwise with the greatest care they may be injured and consequently check the plant for a considerable time.

Summit, N. J.

A. DIMMOCK.

Daffodil Notes.

I suppose we owe a good deal of the revived interest of this old and common spring flower to the "aesthetic craze," another proof that although many things are carried to absurd lengths, yet their advocacy leads to some benefit, and leaves a residuum behind which somewhat atones for the extravagance of its advocates. The sunflowers we did not thank them much for bringing to the front, but the favor bestowed on the daffodil has done good service, although it does seem a strange thing that flowers so easily cultivated and with so many beautiful varieties should have been so neglected. Amongst those who have ministered to the increased taste for the daffodil has been Mr. James Walker of Whitton, and the fine collections which he has exhibited at the Royal Horticultural Society's shows have shown to how large an extent they have been cultivated by him. In visiting Whitton I was first shown into the sheds where large quantities of the golden flowers were being got ready for the morning market; they were being neatly tied up in bunches, and would come under the hammer of the auctioneer at an early hour the next day. Along with them were considerable numbers of the bright scarlet flowers of *anemone fulgens*, but the great mass of flowers was furnished by the daffodil, and owing to the different times of flowering the season is considerably prolonged. Thus at the time of my visit some of the earlier flowering varieties, Emperor, Empress, Sir Watkin, were nearly over, but other beautiful varieties were in flower, or coming into full beauty. The collection at Whitton is grown on raised beds about 4 feet wide, and side by side may be seen all the principal sorts in cultivation, and comparisons can be made between sorts said to be identical. The soil is a rich loam, and probably would be too wet were it not for the system of raised beds, for I believe it is very generally admitted that the daffodil likes a dry soil—i. e., a thoroughly well-drained one. If this be the case it does not mind a good rich loam. The foliage was very fine, and with that peculiar glaucous tinge which gives a large quantity of them such a pleasing appearance as the wind sweeps over them.

I learned here that the earliest of all the large flowered daffodils was Ard-Righ, but it was over of course, as was that splendidly colored flower Golden Spur. Princeps is another early variety which had passed. Grandis is another fine flower, later in bloom than Empress, which it much resembles; the lip of the cup is much recurved and is very striking. Michael Foster is another of the fine bi-color daffodils, with very large yellow trumpet and sulphur perianth.

While many of the Trumpet daffodils were over, those of the Leeds and Barri Incomparabilis sections were in full flower, and although not quite so showy as the trumpet flowers, yet for elegance of form and brilliancy of color they are not to be surpassed. Thus in the incomparabilis section such grand flowers as Mary Anderson and Princess Mary of Cambridge were in full flower, the former—which also goes in some catalogues as Single Orange Phoenix—the divisions were pure white, and the cup a bright scarlet, a beautiful contrast of color. Princess Mary is a large white flower with a very large expanded orange cup, very distinct from any other narcissus and most durable for cutting. Then there were Albert Victor and Sir Watkin,

which is without doubt the largest of the incomparabilis group, but there were but few flowers of it left, as it is rather an early variety of the Barri group. Conspicuous is the most striking, the divisions sulphur white with orange cup richly stained with rich orange-scarlet, a most remarkable variety. Maurice Vilmorin and John Stevenson were also very pretty. Stella is also a grand flower of the incomparabilis section, which must not be overlooked, although it had passed at the time of my visit. The Leeds section was in full force. This is a very pretty group, although perhaps not so showy as some of the others. *Ianthe* is one of the latest daffodils to flower, and is very beautiful. Katherine Spurrell has very broad and overlapping segments, white with bright yellow cup, and Gera, a model flower, divisions white, cup white changing to primrose. The Nelsoni group is not only pretty in itself but valuable on account of the lateness of its flowering. Aurantius is a lovely variety, the divisions white, with a broad straight cup of bright yellow margined with orange scarlet, but it is scarce at present. —D. in *Journal of Horticulture*.

PYRUS BACCATA.

Forcing Hardy Shrubs.

In these days of glut and low prices many of our rose growers are looking about for something which they can get a reasonably sure crop from, with a fair profit on their investment.

There is no doubt that hardy shrubs properly handled can be grown for the market profitably, as pot plants as well as for cut flowers, and the flowers of many varieties are so beautiful, fragrant and keep so well that their introduction to the flower buying public must be a simple matter. The accompanying cut is drawn from a photograph of a grafted plant of *Pyrus baccata*, var. *floribunda*, shown by Jackson Dawson at the February meeting of the Gardeners' and Florists' Club of Boston. The scions were cut out of doors on January 7 and grafted on the same day by the method known as side grafting. On February 17 they

were in bloom. The specimen represented in the cut was in a four inch pot and about eighteen inches high.

WM. J. STEWART.

THE COMMITTEE ON NOMENCLATURE did well in dividing the work before it and placing each division in the hands of a sub-committee. The ground to be covered is so extended that it is doubtful if effective work could be done otherwise. But even with this division the best results can not be obtained without the assistance of all interested in the work of the committee—and who in the trade is not? Therefore every one should consider it his duty as well as privilege to send to the chairman of the committee or the chairman of the sub-committees any information he may have bearing on their work. If you know of any plant which is known in your locality by two or more names do not fail to place the matter before the committee. It will cost you only a postal card and a moment's time. Don't wait! Do it now! If more convenient to mail it to this office, do so and we will see that it reaches its proper destination.

GRAND HAVEN, MICH., May 27, 1889 — I send you a few sample blooms of Germania and Sensation, two varieties of carnations which, though late, are doing splendidly with us, and as yet we consider them the best of their colors. The clear color and fine form of Germania will be hard to surpass, though we have several new yellows for trial during the coming winter.

GEO. HANCOCK & SON.

The blooms were very fine. Michigan is making a great record in carnation growing, and Detroit must look to her laurels or Grand Haven will take a front place.—ED.

S. F. M. Walker, of Maysville, Ky., sends us some good blooms of seedling semidouble geraniums from seed of his own growing. The colors are quite distinct, but the trusses are not heavy. We should call them worthy a careful comparison bedded out with well known sorts.—ED.

CEDAR RAPIDS, IOWA. — Higley's greenhouses suffered a loss of 1,000 feet of glass by hail May 17.

Saved the Flower Market.

The peace of the flower market at Canal and West streets was distributed last April by a park policeman's order that the flower dealers should abandon their time-honored place of barter. No argument had any effect upon him, and a delegation was immediately made up to see the mayor about it. John Morris, the oratorical florist of Jefferson Market, was selected to do the talking, and on reaching the mayor's office he made so plain and strong a case for the flower dealers that Mayor Grant said: "If the park commissioners don't do what is right in this matter come back to me and I will see about it." The park commissioners promptly said that the sparrow policeman had made a mistake, and business at the flower market boomed as usual. Saturday's interruption to business was for the purpose of presenting a testimonial to Mr. Morris for his services. It took the form of a handsome gold-headed ebony cane, inscribed: "Presented to Mr. John Morris by the florists of the plant market May 25, 1889."—N. Y. Sun.

The Seed Trade.

SEED TRADE ASSOCIATION.—Geo. S. Haskell, Rockford, Ill., president; Albert M. McCullough, Cincinnati, secretary.

American Seed Trade Association Meet June 11 at Washington.

Secretary McCullough writes: Arrangements have been made to hold our meetings at "The Arlington," where special accommodations have been secured for the members and their friends, \$3 per day (regular rates \$5). We have also secured reduced railroad rates with the Trunk Line and Central Traffic Associations (the former operating east of Buffalo and Pittsburg, the latter east of the Mississippi River and south of the lake line) of one and one-third fares for round trip, on the certificate plan. It will be necessary for all parties living out of the territory of these two associations to purchase tickets to first point within their jurisdiction, then purchase through ticket to Washington, taking receipt from the agent, which will secure them rebate on return ticket on endorsement by the secretary.

It is earnestly desired by the officers that a large attendance be had at this time. Besides the many attractions of the National Capital, which of itself will be quite an inducement to many of the members, matters of special interest to the entire trade will be brought before the meeting for action. There are also amendments to the constitution to be acted on, and interesting addresses will be made which will be followed by general discussion, so that this meeting, it is believed, will be of more vital interest to the association than any we have had heretofore. If it is not possible for you to be present you should at least be represented by proxy.

Reduced Express Rates on Seeds and Bulbs.

TO THE AM. FLORIST:—It may interest the readers of the FLORIST to know that the committee appointed by the American Seed Trade Association have, after considerable drumming, secured low rates on prepaid express packages from all the leading express companies in the United States (sixteen in number), and while the price is only a trifle less than by mail, still there is so much more safety and security in sending by express and getting a receipt for the goods that most of the seed dealers will take advantage of it wherever possible. The new rate takes effect June 1, and is as follows:

Prepaid packages of seeds and bulbs may be carried at 10 cents for each package containing 1½ lbs. (24 oz.) or less. When package exceeds 1½ lbs. in weight the charge is one cent additional for each two ounces, unless graduated rate is less. If the through rate exceeds \$8.50 per 100 lbs., no package weighing over four lbs. will be carried at these rates. When passing over the lines of more than one company the charge is not less than 10 cents for each company.

Now let the Society of American Florists appoint their committees and work hard for reduction of the present rate on plants and cut flowers by express which is exorbitant and unreasonable from every point of view. The rate now is one and one-half times the regular merchandise rates. I am certain this lower rate can be secured by a decided stand

and united action on the part of the American florists. CHAS. N. PAGE, Chairman of Seed Trade Committee.

DETECTIVES DETECTED.—The members of the Seedsmen's League are having a quiet little laugh among themselves at the expense of two detectives which the League employed some time since to gather evidence in the conspiracy case in which A. B. Cleveland is alleged to be principal. The two men visited Cape Vincent in disguise, but returned without having accomplished anything. It now appears that Mr. Cleveland had likewise employed detectives to protect his establishment against any prying, and his men not only detected the League's emissaries, but secured photographs of them as well. The laugh is general at the expense of the sleuths employed by the League.

SOME INTEREST is awakened in the trade as to the result of rather poor business generally this season. The financial sky is slightly overcast. The troubles of the A. B. Cleveland Co., Harnden, Haskell, and others, have raised the question as to where is the beginning of the end. Who next when the ides of June arrive? Have the public tired of being humbugged? Are there too many seedsmen or are these hard times? We hope some solution, satisfactory or otherwise, will be found at the Washington meeting and trust many will be there to tell what a rousing business has been done and put down those who are burdened with gloomy views.

J. E. NORTHRUP of Northrup, Braslan, Goodwin Co. passed through Chicago, May 14, for New York, whence he sails for Europe on the steamer City of New York, May 29. W. Atlee Burpee of Philadelphia, sailed for Europe, May 18.

STILLWATER, MINN.—The citizens are considering the feasibility of donating ten acres of land to Vick & Co., of Rochester, N. Y., for a floral garden.

ASSIGNED—H. G. Higley, seedsman and florist of Cedar Rapids, Iowa, made an assignment May 27. The event was not unexpected, trade having been very light with many seedsmen in the catalogue trade this year.

Catalogues Received.

United States Nurseries, Short Hills, N. J., orchids; Fratelli Ingegno, Milan, Italy, seeds; A. R. Reineman & Bro., Pittsburg, plants; R. Van der Schoot & Son, Hillegom, Holland, bulbs and roots; A. Van Velsen & Co, Haarlem, Holland, bulbs and roots; Alex. Dickson & Sons, New Townards, Ireland, new pedigree seedling roses; John Laing & Sons, Forest Hill, London, England, plants; same, chrysanthemums; H. H. Berger & Co., San Francisco, Cal., bulbs and seeds; Jas. King, Chicago, baskets.

Culture of Victoria Regia and Its Associates.

The tank and paths must be constructed of a suitable form; hence, the tank—a sunken one—should occupy the centre of the house, and be surrounded by a path 3 or 4 feet wide. The tank may be dug out either before or after the house is erected, and to a depth of 3 feet. A waste water drain should be laid from the most convenient part, and be fitted with a wooden plug, for the purpose of emptying the tank, and a supply pipe provided with a tap put in at the proper level. The bottom of the tank may be laid with fire-bricks bedded in cement to the full extent of the excavated site, which should be 1 foot larger than the size of the tank when finished, and afterwards walls should be erected around within the area of the cemented bottom. This space will afford ample room for a 9-inch wall made with good bricks bedded in cement, and which should be made to carry the flag-stones intended for the pathways. It will be an advantage to set the walk some 3 or 4 inches lower than the level of the tank, and an ornamental or rounded kerbing be fixed round its edges. By having the tank always brimful, the effect will be pleasing, whilst even the slight lowering of the pathway appears to bring the beholder nearer to the surface of the water than the slight difference of level in reality does. To prevent any one falling into the water, iron standards (movable at will) may be let into the flag stones near the margin, and artistically-formed strong iron railings fixed thereto; such railing, it is important to observe, being made strong enough to be leaned upon.

Owing to the fact that the structure is to be put to two purposes, the Victoria regia must be subjected to special culture—*i. e.*, must be treated and grown as an annual; hence, in the matter of space for the roots and the amount of soil required to grow it in, much less than are customary will be required, with the advantage that fresh soil may be readily supplied annually. The one thing needful is a circular space for the soil, which may be 4 to 5 feet in diameter, and near the centre of the tank. This is done by simply building a wall with ordinary bricks in pigeon-hole fashion, the bricks being laid lengthwise; and the height of such wall may be 2 feet. It may be well to observe that the brick-work is only intended to maintain the soil in position, and avoiding the use of a large quantity in a spreading heap, that is liable to get distributed, and foul the water at such times as it is necessary to enter the tank for any purpose, &c. It may be well to add a suggestion in this place, that probably sheets or wire made of iron may be made to hold the heaps of soil together, by which means the work will be lighter.

The requisite heat for such a structure need not exceed a flow and return 4-inch pipe, which should be placed near the side of the tank, and below the water-line, the same arrangement of pipes being placed around the sides of the walks furthest from the tank. Where economy in construction is of importance a single 4 inch pipe may be made to do within the tank, provided that the boiler is efficient. As a matter of fact, this need of hot-water pipes within the tank will necessitate a deeply placed boiler, which fact must be taken into consideration when the estimates are prepared. It may be well to add that a single water jet should be attached to the water pipe, for occasional use in washing the surface of the leaves, and to give motion to the water in

the tank. Beyond this it is well to take a water-supply pipe to some central spot under the roof and above the tank, to which a tap should be affixed, and under which a tin scoop attached to a rod of iron or wood should be made to swing, and into which the water from the tap could be run in any quantity that may be deemed requisite, and each time this scoop fills the water is ejected into the tank below, by which means the stagnation of the water in the tank will be prevented.

The proper time to prepare the tank for planting is between the second week in the month of February and the end of March, though good results are obtainable from planting in April. Such as I grew were planted in rough loamy soil from the margin of a pond. The plants were set out in February in a large tub filled with soft water, and which was maintained at a moderate warmth by occasionally removing a gallon or two of water therefrom and replacing it with warm water, the tub being placed in full sunshine in the stove; but where the tub can be placed over hot-water pipes there is less trouble. These young seedlings, having but four or five small leaves, grew freely for a few weeks in their 48 sized pots, when, the tank being ready to receive them, they were turned out of the pots into the mound of soil and made firm about the balls. The plants grew rapidly until the month of July, and the grand leaves all but filled the tank, one measuring 7 feet in diameter, and the beautiful flowers appeared. Full exposure to sunshine was always constantly the rule, whilst the warmth of the stove was from 80°–90°, the temperature of the water being the same, or perhaps a little higher, owing to the proximity of some hot water pipes.

The Nymphaeas best adapted for such tank culture are the Egyptian *N. coerulea*, *N. Devonensis* X (deep rose), *N. rubra*, *N. cyanea*, *N. dentata* (a white species, very distinct from the British or Canadian *N. alba*).

The best way to clean the tank is to sweep the bottom with a whalebone broom, scrub the sides, and let off about one-third of the water whilst it is in a state of motion, by which means much of the slime will flow away. Meantime fresh water should be run into the tank, and a strong heat maintained in the hot-water pipes to raise the temperature of the fresh body of water. Care should then be taken to remove dirt and moss from the crowns of the plants and the long leaf-stalks; albeit the leaves are well protected by the turning-up rim, they are liable to be infested with masses of moss-like growths upon the lower surfaces, especially upon the ribs, which project from the leaf surface into the water. To remove these growths, I have found it the best way to turn each leaf completely over on the water. The best way to do this is to lay the arm upon one side of the leaf near its edge, and gradually force that part under water, when with the other hand the other side may be brought over. By this means the leaves are in no wise strained or injured, and I have reason to believe this through immersion of the leaves for a short time under water results in greatly increased growth; even as the foliage of our native species grows more vigorously following high winds, which drive the leaves down beneath the surface, or drive the water over them. Having cleaned the under-surface of each leaf, it should be syringed and carefully returned, each to its natural position. For a few hours following these periodical

cleanings, permit the water to remain quite still, by which means it will become clear and the plants greatly benefited.

As autumn approaches, and the production of flower ceases and the leaves lose their freshness, the water should be let out of the tank, and the Victoria plant, together with the soil, removed. The Nymphaeas can be preserved through the winter by being potted up, and each pot placed into deep pans of water, in the stove; or they may be plunged in a tank, but they must get as much light as possible.

When the tank has been emptied, scrubbed out, etc., about the first week in October, or somewhat earlier, it may be filled with any kind of plants requiring protection from cold, and even somewhat tender subjects may be stored therein, as the hot-water pipes both within and without the tank will afford heat sufficient against frost.—*William Earley, in Gardeners' Chronicle.*

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advts. not admitted under this head.

SITUATION WANTED—By a first class rose grower and plantsman, 15 years' experience, unmarried, sober and energetic, good references. Address: GROWER, care American Florist, Chicago.

Cottage containing 9 rooms, barn and 3½ acres of land. For full particulars, call or address: GEORGE A. BACKUS, Newtown, Long Island, N. Y.

American Association of Nurserymen.

The fourteenth annual meeting to take place at the Grand Pacific Hotel, Chicago, beginning June 5th, promises to be one of the most successful ever held. The new secretary, Mr. Chas. A. Green, has beaten the record in the way of attractive programmes. The one just issued by him is in every respect most excellent. A full outline programme is given; very full instructions for securing reduced railroad rates and many notes of interest. Hotel, hall and exhibits will all be under one roof. A big time is expected.

WANTED—Competent florist, single, steady, capable of taking charge, with thorough knowledge of growing roses and general stock; good pay and permanent place to party of approved ability and habits. Address, stating terms
J. T. WILLIAMSON, Memphis, Tenn.

TO RENT—OR FOR SALE—Well stocked green-houses, about 25,000 square feet of glass, at South Orange, N. J., less than one hour from New York City, five minutes walk from depot. Buildings in first class condition. Model houses built on the most approved plans, such as recommended by John May. Will rent for a term of years. Only responsible parties need apply. Address
J. BROS., P. O. Box 212,
South Orange, N. J.

OCT. 1.—Full Supply of LILIES.

OCT. 20.—ENGLISH IRIS and GLADIOLUS.

NOV. 10.—SPIRÆA and LILY OF THE VALLEY.
New Crop TUBEROSES.

Can the American Wholesale Bulb Houses Supply the
American Florists to Advantage?

In answer to the above question we say yes. We claim that the florist using an average quantity of forcing bulbs, say from \$100 to \$500 worth in a season, can better afford to place his order with any reliable Wholesale American House, than to import the same direct for himself.

WHY? Because: First—the supply named in calendar above must come from at least six different European sources. Secondly—they must all be shipped at different times. Third—if bought by the Florist direct from one point in Europe, he must pay the dealer there who supplies him, an extra profit on at least four or five classes of bulbs which that dealer purchases at second hand. In this he has no advantage over the American Importer, who buys all of them at first hands.

Again, should the American grower attempt to purchase direct six or eight lots from as many different sources, the extra proportion of expense for limited quantities would make the cost of such lots exceed the price for which they could be bought of the American Importer, not to say anything of the extra annoyance and trouble of sending references, and opening accounts, together with risk of delay from lack of proper shipping instructions, Consular Invoices and Custom House delays. We claim that at the opportunities for making money out of all this stock come only to those who plant at the proper time and in proper conditions to meet the demands of the Cut Flower market, and the florist who does not plant to advantage, who misses a day or a week in starting his bulbs, may also miss his profits and incur a loss through consequent failure to put his flowers on the market at the right time.

All the above we think true in a general way. Now, as regards our own facilities for serving you, we believe that we have arranged for all of the stocks referred to above to arrive at the earliest possible moment. For instance, our Freesias will be mature and ready June 15. Our Roman Hyacinths coming from the south of France by rail and fast French steamers have been in this market the first of any for several years. Lilium Harrisii, from Bermuda, reach us about July 15, though we know of several florists who have imported these from Holland, certainly at a loss in price as well as in low quality of bulbs. Lilium Candidum we shall receive August 25 and ship at once. We claim many florists lose their profits on this stock by delaying planting until they receive Dutch Bulbs a month later. We could continue comparisons of our list until December, but think the above statements prove the point we wish to make; that provided our import prices are reasonable, the extra advantages we offer in time and prompt delivery as well as an opportunity for inspecting samples if required before delivery, really make it to the advantage of any general buyer to secure stock of us.

If the prices named on this page are not satisfactory, we respectfully ask a list of what you need that we may make an estimate of a fixed sum for your entire supply, the same if desired, to include prepayment of Freight or Express charges on all, to your address. We think ten years experience in importation of these forcing bulbs place us in position to furnish your entire supply to the best advantage and if not, we want to know why.

J. C. VAUGHAN, 146 & 148 W. WASHINGTON STREET, CHICAGO.

Blooming of Lilacs Simultaneously at Different Latitudes.

Referring to item on this subject on page 464 of the last issue, it is a popular delusion that parallels of heat or cold correspond with parallels of latitude; such is not the case—iso-thermal lines—that is, lines of similar degrees of heat—differ from parallels of latitude from many causes, such as variation in altitude, prevailing drouth or rainfall, contiguous large bodies of water, etc. The government iso-thermal maps will show that Peotone, Ill., forty miles south of Chicago and Lake City, Minnesota, are subject to about the same degrees of heat, and lilacs should bloom at the same time, though separated as to latitude by about 200 miles. It would be however a genuine curiosity to find similar flowers in bloom out of doors at Grand Haven, Mich., and La Crosse, Wis., at the same date, which places although situated in about the same latitude will show a difference of at least 150 miles when considering the question of similar temperature; that is to say, to find temperature similar to La Crosse, Wis., directly south of Grand Haven, Mich., you would have to go 150 miles further south.

J. C. VAUGHAN.

Forcing Bulbs for Fall Delivery

If you will make up a list of your wants and send us now, we will book same at importation rates. We are now making up our regular commissions to our growers in France, Germany and Holland, and will take your orders—large or small—at a slight percentage over cost if you will club with us to save freight, etc. **REMEMBER**, we handle no second grade bulbs. Our experience of many years in importing bulbs, enabling us to procure the very best quality at the lowest prices. If you intend to avail yourself of this opportunity, write us at once, giving varieties and quantities—and we will furnish an estimate by return mail. We handle the following varieties in quantity—all splendid forcers:

- Lilium Harrisii, first class 5 to 7-inch.
- " extra 7 to 8-inch.
- " Candidum, best North of France grown
- " Longiflorum, Bermuda grown, 5 to 7-in.
- Roman Hyacinths, White, extra, 11 to 15 centimetres.
- Roman Hyacinths, Pink, extra, 11 to 15 cent.
- Paper White Narcissus, extra.
- Double Yellow Narcissus, Von Zion.
- Trumpet Major Narcissus, true.
- Freesia Refracta Alba, first size.
- " extra large.
- Tulips, La Reine, white.
- " Belle Alliance, scarlet.
- " Yellow Prince, yellow.
- " Kaiser Kroon, crimson, yellow edge.
- " Cottage Maid, pink and white.
- " Van Thol, scarlet.
- " Double Duke of York, rose and white
- " Princess Alexandra, red and yellow.
- " Imperator Rubrorum, scar.
- [The three last named are splendid forcing yrs.]
- Lily of the Valley, best Hamburg pips.
- Spirea Japonica, fine clumps.

JOHN GARDINER & CO. Philadelphia

FORCING BULBS FOR FALL DELIVERY.

NARCISSUS

and Other Popular Bulbs for Spring Forcing

SPECIAL PRICES UPON APPLICATION.

- | | |
|---|--|
| Narcissus Albicans, large creamy white trumpets; one of the best. | Narcissus Nobilis, a first class variety for florists, free and early. |
| Narcissus Bicolor Empress, the Queen of the bicolors, immense trumpets, a great favorite. | Narcissus Obvallaris, the true Tenby daffodil, one of the best varieties, forcing deep rich yellow flowers of great substance. |
| Narcissus Bicolor Grandis, similar in color to Horsfieldi; but with stouter flowers and much later. | Narcissus Odorus Campenelle, the well known Campenelle Jonquil, very strong bulbs. |
| Narcissus Bicolor Horsfieldi, a great beauty and fine for cutting. | Narcissus Orange Phoenix, large double white flowers with orange center, good for cutting. |
| Narcissus Bulbocodium, "Yellow Hoop Petticoat," fine strong bulbs for forcing. | Narcissus Pallidus Præcox, the earliest of all, forces very freely, single, sulphur colored trumpets. |
| Narcissus Bulbocodium Citrinus, pale sulphur flowers, and very early. | Narcissus Rugilobus, true, large yellow trumpet, very free and very early. |
| Narcissus Emperor, the largest; immense stout flowers of a rich yellow. | Narcissus Scoticus, the Scotch Garland daffodil, a beautiful variety both for borders and for forcing. |
| Narcissus Golden Spur, immense deep golden yellow flowers, and wonderfully early. | Narcissus Von Sion, true, the double deep yellow daffodil. |
| Narcissus Henry Irving, rich yellow, large bold trumpets. | Freesia Refracta Alba, large bulbs for forcing. |
| Narcissus Incomparabilis Cynosure, a beautiful single incomparabilis for cutting, yellow cup, divisions creamy white. | Freesia Leichlini, a nice contrast to preceding and forces well. |
| Narcissus Incomparabilis Stella, large single white variety, very early, fine for cutting. | Gladiolus The Bride, flower pure white, fine for forcing. |
| Narcissus Major, true, one of the best forcing sorts, large yellow trumpets, similar to maximums. | Helleborus or Xmas Roses in great variety, and extra fine flowering clumps for forcing, can be supplied early in fall. |

And many other first class sorts. List of varieties and price I should be happy to furnish upon application.

Support for Weak Ridge in 11-Foot House.

The ridge of an 11 foot house which was beginning to sink in was strengthened as shown in the accompanying sketch by Mr. D. B. Fuller a Chicago florist.

The 1½-inch iron pipes were readily bent at the top, all the tools necessary being a common vise. This forms a secure support for the ridge without necessitating a post in the walk, and may be used with good effect in the annual overhauling of old 10 or 11-foot houses.

SHOULD HAVE OUR TRADE **DIRECTORY.**

Address **AMERICAN FLORIST CO., 54 La Salle St., CHICAGO.**

AZALEAS.—If you have any azaleas to carry over, they should now be plunged out of doors in a convenient frame. Spent manure is a good material to plunge them in. Some believe in shading them during the summer, and the plants do look better in the fall if slightly shaded, but some of the most successful growers do not shade them, finding that they set their buds better if exposed to the full sun during the summer. Spent hops should never be used to plunge azaleas in, as they are apt to injure the plants. Several Philadelphia growers have found this out to their cost.

A PROFITABLE ORCHID.—Mr. Chas. D. Ball, Holmesburg, Philadelphia, has eight large plants of cypripedium insigne from which in the last five years he has sold flowers averaging \$4.50 per year from each plant. He is well satisfied with his returns from these plants, and they are certainly large when the small space the plants occupy is considered. He believes that failure to secure flowers in profitable quantities from this cypripedium is most frequently due to overpotting and over-feeding.

THREE HUNDRED DOLLAR PRIZE. SOUVENIR DE WOOTTON

THE OFFER:

WASHINGTON, D. C., May 23, 1889.

My Dear Mr. Craig:

I have about concluded to offer a prize of \$300 for the best twelve cut blooms of SOUVENIR DE WOOTTON rose, to be exhibited at the Pennsylvania Horticultural Society's meeting in January or February next (1890), open to all comers except myself. If this meets your approval and you will send me a letter as soon as convenient to that effect, naming three judges to serve on the occasion and designating the exact day on which the meeting will be held, I will make the matter public through the columns of the AMERICAN FLORIST in the next issue.

Very sincerely yours, C. STRAUSS & CO.

To MR. ROBERT CRAIG, Pres. Penn. Hort. Society.

THE ACCEPTANCE.

From the Philadelphia Public Ledger, May 22, 1889.

THE SOUVENIR DE WOOTTON ROSE.

At the meeting of the Pennsylvania Horticultural Society, last night, Mr. Robert Craig announced that Strauss & Co., of Washington, D. C., offer a premium of \$300 for the twelve best blooms exhibited at the fall show of the society, of Strauss & Co.'s rose, 'Souvenir de Wootton.' The offer was accepted. The "Souvenir de Wootton" is a hybrid of rich color and very fragrant. It was named in honor of the visit of delegates to the American Florists' Convention, held several years ago, to Mr. Geo. W. Childs's summer residence at Wootton, where they were pleasantly entertained. Mr. Craig stated that the offer would undoubtedly stimulate growers all over the country to compete.

NOTICE. THE WOOTTON IS A HYBRID TEA, OF A RICH RED COLOR, AND WE CLAIM THAT IT IS THE FREEST CONTINUOUS WINTER BLOOMING ROSE UNDER GLASS FOR CUT FLOWER PURPOSES THAT HAS EVER BEEN ORIGINATED.

Orders for the Wootton will be filled promptly during June, July and August at \$25 per hundred; \$100 per five hundred; \$180 per thousand. In less quantity than one hundred, at 50 cents each.

By **C. STRAUSS & CO.** P. O. Box 422 WASHINGTON, D. C.
ALSO FOR SALE BY **JOHN COOK**, 318 N. CHARLES STREET, BALTIMORE, MD.

JACOB SCHULZ,
LOUISVILLE, KY.

Measuring Palms.

There seems to be a diversity of opinion as to how the height of a palm should be determined. Some contend that it should be measured from the top of the earth in the pot to the tip of the leaf which stands the highest, and others that it should be from the bottom of the pot averaging the height of the leaves.

There should be more uniformity in this matter and some one method adopted which shall convey a fair idea to the mind of the buyer. Certainly catalogue men who give measurements should state their method. With present methods there is very apt to be misunderstandings between buyers and those who sell by catalogue.

We would recommend that the method of measuring from the bottom of the pot (that is, from the floor or bench on which the plant is standing) to a point averaging the height of the leaves, be universally adopted, as it possesses some advantages over the other. Also that in compiling a trade list of palms, the average number of perfect leaves on the size quoted, be stated.

Of course this is still far from an accurate description but it will be a step in the right direction.

Ives' Putty Machine.

Patented Jan. 8, 1887.

The best device ever invented for laying putty.
With this you can make old leaky sash perfectly
tight without removing the glass. It will do the
work of five men in bedding glass.

Send by Express on receipt of price, \$3.00.

J. H. IVES, DANBURY, CONN.

**HUGHES'
SOLUBLE FIR TREE OIL.**

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually
all parasites and insects which infest plants
whether at the roots or on the foliage, without in-
jury to tender plants: such as ferns, etc., if used as
directed. Used as a WASH it imparts the gloss and
lustre to the foliage which is so desirable on exhi-
bition specimens.

It kills insect life on man, animal, or plant, without
injury to the skin, wherever parasites may appear.

THE COLD and rainy weather of the past ten days is in marked contrast with that of the June-like days of previous week, and has delayed the planting of much tender stuff. The season at June 1 will show little if any advance over the average year. Frosts are reported at several points the past week and summer weather will not be unwelcome now, set in as soon as it may.

THE Omaha Herald says: The bouquets made by the ordinary masculine florist are most remarkable structures, and belong, aesthetically speaking, with those astonishing cakes that German bakers love to show their skill upon. It is hardly less than a crime for flowers to be so misused as they are.

[How is this? What have the boys in the wild and wooly west been doing? E.D.]

ARRANGE YOUR BUSINESS now in such a way that you may surely be able to attend the Buffalo convention of the national society. Many of the little objectionable features noted at conventions held in the larger cities have been avoided in the arrangements for the meeting at Buffalo; the convention hall is of just the right size, neither too large nor too small, and with excellent acoustic properties, and it faces on a quiet street. The speakers should be heard with ease.

The Nurserymen's Convention.

At the fourteenth annual meeting of the American Association of Nurserymen held at Chicago, June 5 and 6, about 250 nurserymen were present and an excellent programme was discussed, certainly an advance over those of the last two conventions. The meeting place was in the lady's ordinary at the Grand Pacific Hotel, a room just large enough to seat the members present comfortably, and there were but few of the speakers who could not be heard with ease and comfort. As a consequence the discussions on the various essays were freer and more enjoyable, and many valuable points were brought out which have at other times been lost through the inability of all present to follow the various speakers.

Among the essays read "Suggestions for the Improvement of the Nursery Business" by the Hon. S. M. Emery, of Minnesota, was of much interest, and will be found in full in another column of this issue.

S. D. Willard of New York, gave his experience with new varieties of plums, and noted those which had done well with him. Quite a discussion followed upon the suitability of certain varieties for certain localities, and Mr. Patten of Iowa, very properly declared that salesmen should be allowed to sell in certain sections only varieties which had been found to do well in that locality. He believed that by enforcing this rule immense benefit would result to the whole trade.

In treating on the subject of "New Small Fruits," Theo. F. Longuecker of Ohio, believed that nurserymen should not distribute new berries until they had received a more thorough trial at the various experiment stations located at widely different points, thus showing their adaptability to different soils and conditions, and that nurserymen should not send out any plants of a new berry which were not propagated by themselves from plants known to be true, as it had often happened that stock secured from the originator of a new berry had proved to be mixed and the trade had thereby received condemnation for the errors of others. Prof. Budd, of the Agricultural College at Ames, Iowa, said that Downer's Prolific was undoubtedly still the best strawberry for home use. He believed that in the planting of strawberry plantations not enough plants bearing perfect flowers were used and recommended that pistillate and perfect flowering plants should be planted in alternate rows in order to have pollen enough to fertilize all the flowers.

A paper by Thos. Meehan of Pennsylvania, on the use of commercial fertilizers in the nursery was read by his son Thos. B. Meehan. Prof. Meehan believed that where common barnyard manure could not be secured except at a considerable out-

lay, the commercial fertilizers could be used to great advantage. In the discussion which followed the manufacturers of fertilizers were given a decided overhauling, several speakers maintaining that most of them were practically worthless, and the sense of the discussion was that while some fertilizers were valuable that the majority should be viewed with suspicion until their value had been proved by a practical test. A number of members recommended the plowing under of rye when it began to head as a valuable and practical method of enriching land.

N. H. Albaugh of Ohio, told what had been learned about packing and shipping stock. In the discussion Mr. Augustine of Illinois, recommended sending a tracer about two days after each shipment. He found that if this was done delays at transfer points were not so apt to occur. The committee on transportation was instructed to attempt to devise some plan by which present delays in transit may be avoided. Speaking of the practice of puddling the roots of trees before shipping Prof. Budd said that where a clay puddle was used the mud should be carefully washed off before planting the trees, as when it dried on the roots it formed a hard covering which the young rootlets could not pierce and frequently caused the death of the tree. This was endorsed by other speakers. Mr. Douglas of Illinois, believed that more trees are killed by being packed too wet than there are by being packed too dry. That while the roots should not be allowed to dry out, a surplus of moisture was still more fatal.

Frank H. Wild of Missouri, considered the storage cellar no longer an experiment but an assured success. He had stock on exhibition in the hotel which had been carried over from last fall.

C. J. Carpenter of Nebraska, said that the demand for forest tree seedlings was almost unlimited. He had found planting a mixture of kinds together an advantage. He read some statistics showing that three European countries, including Great Britain and France had planted a total of 23 million forest trees in one year and laughed at the statement accompanying it that it exceeded the number planted in America. His firm alone had sold in one year 25 millions for planting, and three counties in Nebraska had produced and sold in one year 100 millions of forest tree seedlings, over four times the number said to have been planted in the three European countries. In the discussion the speakers were practically unanimous that the planting of cottonwood trees should be discouraged. It should in no event be planted among other trees as it robs everything near it.

Mr. Morey of New York, made no attempt to settle the question as to which tree digger was the best. He laughingly stated that on the circulars of each man-

manufacturer appeared the statement that his digger was the best on earth, and that as nurserymen were never known to tell an untruth he should not attempt to discriminate between the modest claims of such evidently truthful men. As to the value of some kind of a digger he believed that there could be no doubt. Mr. Douglas said that the nurserymen in the "rowdy west" would have all been in the poor house if it had not been for the tree digger, and sincerely pitied the nurseryman who had as yet failed to make use of them. He called the attention of those present to the fact that the original inventor of the tree digger was a Mr. Harkness of Illinois, and that those now in existence had but few if any improvements over the original.

N. H. Albough, of Ohio, thought that the machines for spraying insecticides over trees were a grand help to the nurseryman, and that the arsenical compounds when sprayed on the trees in this way will kill any insect that eats the foliage.

The Hon. H. E. Van Deman, U. S. Pomologist, of Washington, spoke on the nomenclature of fruits. He told of the reform started by the American Pomological Society and urged upon nurserymen the adoption of and use in their catalogues of the nomenclature prescribed by the Pomological Society. He mentioned some of the numerous synonyms of apples and other fruits in various parts of the country and expressed the belief that only through the nurserymen's catalogues could this much needed reform be practically brought about.

T. S. Hubbard, of New York, spoke on best methods of wintering grape vines. He packed them in bundles in cellar without anything around them; the cellar must be well ventilated if damp as otherwise the dampness may start them. In a dry cellar the roots should have some covering. Mould or mildew will not affect the roots unless they have been injured either by being bruised, dried or frozen.

In regard to best method of growing vines and stocks the Hon. Silas Wilson, of Iowa, said that grape cuttings should be from seven to ten inches long and that bundles of cuttings should be tied with willow or some similar tying material. Wire should never be used for this purpose, as the wire rusts and serious injury to the cutting results. The cutting should be set deep enough in the ground to leave only one bud exposed. He thought that many cuttings were seriously injured by carelessness in allowing them to lay around until they dried out. Mr. Hubbard stated that freezing did not injure the grape, but that a sudden thawing out was what did the damage. Prof. Budd said in regard to ventilating storage cellars that it should be done when the air outside is cooler than that inside—at night or in early morning, and that little ventilation should be given in damp weather, as the moisture would come in and condense inside, thus wetting the stock and inducing it to start. The value of the practice of dipping the roots of frosted plants in water to take the frost out before planting was enlarged upon by several members.

A paper from Peter Henderson, of New York, treated on preserving wood in greenhouses and the value of iron in greenhouse construction, but as we shall have an article from Mr. Henderson on this same subject in an early issue we forbear making any notes at this time.

As to the wisdom of nurserymen pursuing specialties Mr. Augustine, of Illinois, thought that if it meant confining

themselves to those things which they can grow most successfully he heartily approved of specialties. He believed that many nurserymen were trying to do what their soil and other conditions would not allow them to profitably accomplish, and that much of the profit realized from the stock which they were successful with went to help out on losses from attempts to grow other kinds.

Mr. Bragg, of Michigan, thought that Bogg's marker and a new adjustable nursery plow were valuable new implements for the nurseryman. Speaking of the various tree diggers (being himself a manufacturer of one), he recommended that nurserymen buy one of each of the four kinds on the market, retain the one that suited them best and loan the others to their neighbors.

The transportation committee was requested to make an effort to secure lower express rates, and the secretary was instructed to assess each member \$2 to obtain a fund to pay the expenses of the committee.

In response to a question, Prof. Budd said that his experience had been that grafts on crown roots made fewer fibrous roots but larger and stronger ones than grafts on lower sections of roots. That he used nearly the whole of the root—usually two thirds or more, and taking everything into consideration he believed that method to be the best.

Fully one half of the programme was omitted owing to the absence of those to whom subjects had been assigned, but curtailed as it was all present were well pleased with the programme as rendered.

New York city was selected for the next annual meeting, and officers were re-elected as follows: President, Geo. A. Sweet, Dansville, N. Y.; First Vice-President, G. J. Carpenter, Fairbury, Neb.; Secretary, Chas. A. Green, Rochester, N. Y.; Treasurer, A. R. Whitney, Franklin Grove, Ill.; Executive Committee, Leo Weltz, Wilmington, O., S. D. Willard, Geneva, N. Y., S. M. Emery, Lake City, Minn. It was decided to make the New York convention a ten day session, in order to secure a longer limit on their railroad tickets.

Mr. Willard thought that the extra seven days would be an excellent thing for members who come from prohibition states, as it would give them time to straighten up and go home in good shape. Robt. Douglas incidentally mentioned the practice of substitution and dryly expressed the belief that some nurserymen drew the line at sending Norway spruces for Ben Davis apples. There was found to be a comfortable balance in the treasury, and the secretary's salary was increased to \$150 per annum. The exhibits were not as numerous as at previous conventions. A handsome collection of orchid blooms was shown by Pitcher & Manda, Short Hills, N. J. Parker Earle, president of the American Horticultural society was present one day.

Suggestions for the Improvement of the Nursery Business.

[Read before the American Association of Nurserymen at Chicago, June 5, 1889.]

At a memorable wedding feast that occurred forty centuries after the adoption of the apple as the original nurserymen's specialty, the rule was propounded, that good wine was put on tap at the close of the festivities; this is the only needed explanation, for this article appearing as an early selection.

"By the bitter irony of fate" an easy comfortable topic has been assigned: "The improvement of the nursery busi-

ness." Did you ever notice a street gamin arrayed in the cast off habiliments of his paternal progenitor, boots a dozen sizes too large, and the balance of the outfit, concealed from view by the coat that enveloped body, soul and breeches, a mile too large? Such I feel to be my condition, assigned to the pleasant task of instructing gentlemen, some of whom enjoyed a flourishing successful trade before my advent. These must not feel called upon to adopt any suggestions herein offered, prompted more perhaps from a burning zeal to obey orders than with any overpowering impression that the business, as a profession, will go to the dogs unless radical changes be made.

In suggesting improvements to increase production the maxim of the senior Weller who, when asked for his advice as to marrying a widow, invariably summed it up in the one word "Don't," might not be amiss in the apparent overdone state of stock. Note a blind man in strange quarters dependant wholly upon his staff and sense of hearing, feeling his way step at a time, such is not an incorrect simile of the history of each nurseryman or firm, considered from the beginning; many without the least idea of the future of their business. Experience, the inexorable tutor, that alone has won success; is it any wonder that many mistakes and errors of management have crept in, in working to such misfit patterns?

Some years ago roller coasters were popular in certain localities; large structures were provided with slides irregular in their course; the start was a steep descent, and from the momentum thus obtained the vehicle was swiftly borne downward and up over descents and ascents. The variation in prices of staple nursery stock in the past eight years reminds one of the roller coasting. In that time first class double X, inch and a quarter, dyed in the wool pears have wholesaled at 42c, likewise at 11c. Prime, gilt edge, number one sweet or sour cherry have gone like hot cakes at 35c, the supply nowhere equal to the demand; and the identical grade of cherries named have gone to the brush pile inside of sixty days, because they were not in demand at 4c. Apples, strong two year stock, Kansas grown, none better, budded or grafted 6 to 7 feet, straight as candles, thrifty and vigorous, have been sought eagerly at 15c, and as good trees have been freely offered this spring at 2c.

My friends, this was the experience of the western wheat grower, who was ruined by receiving \$2.50 per bushel for wheat, as was the case in 1868; ruined because, like the nurseryman getting 42c. for pear and 35c. for cherry, he imagined he had a cinch on all creation, and that he had the world by the nape of the neck and the slack of the trousers; habits of extravagance were contracted, the old southern idea obtained, to raise more cotton, to buy more negroes, to open up more land, to raise more cotton, etc. When the yield of wheat was cut in two and the monotony of half crops was broken by total failures, and the price, controlled by the production of wheat by the ryot of India, dropped to 60c, the bottom fell out, the bubble was pricked and the deluded grainger was left to the study and practice of new schemes or starvation.

That these things are true every nurseryman knows to be a fact. What are the causes? How can they be overcome? The blind man needs light. Is it overproduction? perhaps. Has the ruin of the nurseryman afforded any permanent gain to the world at large? If so there

THE NURSERYMEN IN CONVENTION AT CHICAGO, JUNE 5 AND 6.

may be some compensation, and yet we all know this is not the case. The orchard planter has paid \$5 per dozen for choice apples, \$15 per dozen for the luscious pear, and he has been convinced that life, liberty and the pursuit of happiness depended solely upon the all wool and a yard wide cherries at \$10 per dozen. If retail prices have held up why should the man who has borne the heat and burden of the day, be swollen and shrunken all out of financial shape by prices that have varied more than 500 per cent.

Now, friends, can't we trace this matter back to a logical head and detect the error responsible for these unjust variations. Some will blame the removal of the tariff upon imported goods for the shrinkage, and yet French apple seed costs double the price of the native seed, and very few, if any, apple seedlings are imported. The naturalist is sometimes confronted with disagreeable duties, securing casts of venomous reptiles, and yet science prevails, first procuring the snake they feed it Mrs. Winslow's syrup or some other harmless soporific, until insensibility ensues, a mold is taken in plaster, the sleeping beauty turned out none the worse for wear, and the cast is filled with tinted plaster of paris, the old mould is then delicately chiselled away until the tinted filling is reached, and the result is a fac-simile resemblance of a dangerous creature. "Comparisons are odious," none are intended, beyond an honest attempt to attach responsibility for the disorganized state of nursery prices, when it belongs to the nurseryman.

Upon whom does the nurseryman depend largely for the sale of his products? That bright and entertaining gentleman who, with his elegant outfit of painted fruit and other aids, wends his way from house to house and persuades the owners to exchange wealth of the realm for nursery goods, so far so good; this is an eminently proper procedure. The agent is usually on the war path during the months of May, June and July, from 12 to 16 weeks, winding up his canvass in August and

resting from his arduous labors until the time for delivery arrives. The goods are packed and delivered inside of fifteen days as a rule, and he returns to headquarters to divide(?) with the man who has spent from two to four years in producing the goods sold, and who in doing so has experienced more risks than the children of Israel in their 40 years outing. The division is figured by the rule of 4, that is to say the nurseryman gets 1 part and the solicitor 3; the apple tree retailed for 42c, is settled for at from 6 to 10c, the nurseryman receiving from 14 to 25 per cent as his pro rata, while the salesman or the middle man has to reimburse him for labor, expense and profit, from 75 to 86 per cent. His stock in trade is his outfit and cash expenses for 100 days, his acquirements or knowledge of the delicate processes of propagation are actually "nil," and his best stock in trade is cheek illimitable and push; and the worst is not told, because in some instances they expect canvassing outfits to be supplied free and to draw from the nurseryman upon their orders, when received, a sum of money oftentimes greater than the wholesale curb price of the goods supplied. In other words for the sake of doing business a cash capital is required outside of the cost of production, fully equal to the value of the goods sold. If I am drawing a long bow please call me down.

Some years ago while on a business trip to the Buckeye State, that noble commonwealth that supplies our association with so many bright and active members, that would as gladly supply all federal officeholders, all tree men and prime nursery stock needed to supply their orders, I visited a beautiful little city in the Miami Valley. My guide, philosopher and friend, was one of the ubiquitous and versatile tree dealers with whom the town seems so well supplied. We drove through the residence portion of the city and my attention was called to the elegant residence of Mr. A, a tree dealer; Mr. B occupied also a charming cottage, his business was the dissemination of new and valued varieties of fruits, etc.; on the opposite side Mr. C, another exam-

ple of Johnny Appleseed, had recently finished a superb mansion from last season's profits, and so on, up one street and down the next, until to my fevered imagination that little city seemed to be peopled with flourishing tree men who could at least in a measure meet the ancient description of the lily of the field, that neither toiled nor spun. Our drive presently brought us toward the nurseries located in the outer suburbs, and in place of the suburban villas, that should furnish shelter to the man that made it possible by the expenditure of his labor and capital, for so many to thrive; very modest edifices seemed to satisfy their desires.

The comparative prosperity seemed to have been divided, as did the establishment of the Irish couple who, when they agreed to disagree, divided their shanty by the woman taking the inside and the man the outside. Or like the tramp bound to New York city from Buffalo, who tackled the captain of the canal boat for transportation, a bargain was struck whereby his fare was to be given him in return for services on the trip. The labor assigned to him was driving the mules on the tow-path; after doing this for three days, he decided that except for the name of traveling by boat, his trip was a failure. And so with the nurseryman who seems to be enjoying the privilege of working for nothing and boarding himself.

Now friends, I have no quarrel with the dealer or the middle man; two are always needed in constructing bargains, and you are the other party to the contract. It is simply a case of where in place of laying away his gall with the balance of his outfit used when through canvassing the bucolic denizen, he has brought it in with him, turned it loose upon you, and has made you believe your business would go to the deminition how wows unless you gave him your good trees at his poor prices.

Nurserymen all over the country have increased their plantings, stimulated by the good prices of former years, with no controllable outlet to move off their stock at maturity. Catalogues are going forth with the legend emblazoned thereon "No agents employed," which is a direct bid to dealers to represent them, and they can't be blamed for this, because it relieves the office of a world of bother and trouble to dispose of the stock, and such a business is a pleasure to transact, always provided it can be kept in bounds. These agents whose only interest in your business is the margin between wholesale and retail prices, have not always talked things just as they are; customers have become suspicious, sales have fallen off, expenses increased, until to-day the man that can retail \$10,000 worth of trees can earn a better salary than a member of Congress. A wild chase has been entered into between producers, the object of which apparently is to see who can sell the most and the cheapest. Cannot this be obviated? Other goods find their way to market short of such enormous tolls; dry goods are sold away past consumption at an average of less than 1 per cent. commission from the wholesaler to the retailer. As between 100 per cent. of labor, land and expense, invested to net say \$1000 there certainly ought to be a larger profit to the man that saves 25 per cent. of land, labor and expense to gain the same \$1000.

The cure for this? that you must work out. The hair of the dog is good for the bite; reckless, indiscriminate plantings must be avoided, cost must be considered (how many of us can tell the cost, when

ready for market of our wares?), and by judicious, careful manipulation prices brought up to the standard that the grower should receive a fair return for his labor and capital. This is clearly to the interest of all parties concerned; the dealer is foolish to kill the goose that lays the golden egg, foolish because while he may think "well, I will make my pile and quit," he will never reform in the world. Once a tree man always a tree man until death do part the tie between time and eternity.

Do not understand me to desire to convey the impression that every nurseryman is on the verge of ruin and that all have to do business as has been faintly outlined; nothing of the kind. There are scores of nurserymen to whom your financial faith can be pinned with every assurance of safety; but all the same they feel the demoralizing effects of this wholesale cutting, and would doubtless gladly join hands in any honorable endeavor to control existing abuses.

Auction Sales of Plants.

The auction sales of plants which occur each spring at New York and Boston meet with almost universal condemnation by those in the trade, and there can be no doubt that these sales have a tendency to injure the market for all alike.

At the New York auction sales this spring prices have averaged lower than in former years, and it would seem that the "auction disease" may soon find its own remedy in forcing prices down to such a point that those who send plants there will not obtain enough for them to pay for packing and transportation. Certainly much of the bedding stuff sent there is worth but little more than the boxes which hold it, though considerable quantities of plants of very fair quality are sold at ridiculously low prices.

We give below the prices per 100 which plants brought at the sale at Young & Elliott's, New York, May 28:

Coleus Verschaffeltii from 2 inch pots, fair plants from two to three inches high, \$1 to \$2; *Coleus Golden Bedder* from 2-inch pots, about two inches high, \$1 to \$1.50; other sorts at latter rate, except mixed lots which sold almost uniformly at \$1; *alternantheras*, 2-inch in variety including *parouchioides major* and *aurea nana*, \$1 to \$1.25; *achyranthos*, 2-inch, \$1; *heliotropes*, 3 inch, good plants, \$4 to \$4.50; *Mt. of Snow geraniums*, 3-inch, \$3 to \$3.50; same, 2-inch, \$1 to \$2; *Gen. Grant geraniums*, 4-inch, \$3.50 to \$5; same 3-inch, \$2.50 to \$5; *fuchsias*, 4 inch, good plants, \$3 to \$9, averaging about \$5; *Rex begonias*, 3 inch, \$3 to \$4.50; same, 2 inch, \$3.50; assorted *begonias*, 3 inch, \$4; same, 2 1/2-inch, \$3; *feverfew*, 3-inch, \$2; *smilax*, 2 1/2-inch, good plants, \$3 to \$4; *German ivy*, 2-inch, \$2; *dahlias*, 2-inch, \$1; *Salvia splendens*, 2 inch, \$3.50 to \$6, seemed to be a good demand for this *salvia*; *Marie Louise violets*, very fair clumps, \$1 to \$3; *Ampelopsis Veitchii*, 3 inch, \$6; *Ampelopsis quinquefolia*, 3 inch, \$5; *gloxinias*, 4 inch, \$6 to \$11; *Hydrangea otaksa*, 5-inch, in fair bloom, \$8 to \$12; *Caladium esculentum*, 3-inch, \$5; *cannas*, 4-inch, \$3 to \$4; *Centaurea caudicissima*, 3 inch, \$3; *chrysanthemums*, 2 1/2-inch, \$3; assorted *geraniums*, 4-inch, \$3.50; *echeverias*, 3-inch, \$3; *Adiantum cuneatum*, 2 inch, \$3; same, 4 inch, \$12; *Pteris tremula*, 3 inch, \$3 to \$6; same, 4-inch, \$7; *Pteris serrulata*, 2 1/2-inch, \$2.50 to \$3; *Pteris cretica albo-lineata*, 2 1/2 inch, \$3; *Pteris argyrea*, 3-inch, \$16; *rose Ball of Snow*, 5-inch, \$11; *American Beauty*, 5 inch, \$30;

Magna Charta, 5 inch, \$10; *Perle des Jardins*, 5-inch, \$12; assorted hybrids, 5-inch, \$15 to \$20; assorted teas, 4 inch, \$2 to \$3; *Pyrethrum aureum*, 50c. to \$1.

It is doubtful if any of these plants could be produced for the amounts for which they sold, except possibly the *colens*. *Coleus* grow so quickly and small plants can be propagated so rapidly that it is possible that there may have been a profit even at these prices on the quality of plants sold, for the bulk of them were but little more than rooted cuttings. But most of the other plants were kinds which can not be produced over night, and it would seem that if prices continue as at present but few will care to grow plants for auction sale in future.

"SOLD AT \$1.00 A HUNDRED. WHO WANTS THE NEXT LOT AT SAME PRICE?"

One dealer who was in former years a large buyer at the auction sales is now rarely seen there. His explanation is that when he used the plants obtained there to fill orders, so many died and had to be replaced that it paid him better to go elsewhere and pay more for stuff which had more life in it. And it is a notable fact that there were but few florists and plant dealers in the crowd of buyers, the majority being private parties who bought for their own use.

The accompanying sketch shows a portion of the auction room at Young & Elliott's, with Auctioneer Elliott seated on his throne governing with autocratic rule the buyers below. Woe to the buyer who meets with his displeasure for the victim will be treated to a fire of sarcastic remarks at his expense which it would be dangerous for any one but an auctioneer to indulge in. But auctioneers probably realize that men who spend their time watching for a chance to buy something for less than the cost of production are not apt to be over sensitive.

Lycastes.

Lycaste now includes *Colax* and *Paphinia* and comprises about thirty species generally distributed through Central America and Mexico, and found growing on trees or in the ground. Many of these are of little value except for botanical purposes, and the *Colax* and *Paphinia* section require too much care to keep them in good health to be of any value to a florist.

I have selected a few species which will be found useful for cutting purposes, all of these flower freely and are easily grown in the houses usually at the disposal of a florist. Rich open soil should be used in well drained pots and abundance of water is necessary both overhead and at root during the growing season,

only sufficient shade should be given to ensure the leaves from being burned and give all the air possible during the warm months. With few exceptions these species can be procured in large quantities and cheaply, and especially is this so of *Skinnerii*, the best known and most popular of the genus.

An article detailing the culture of this species appeared on page 110 of present volume, and the direction there given is applicable to all the following species, excepting that aromatic and cruenta should be kept quite dry as soon as the leaves are off. These are golden yellow kinds, the latter being ornamented with a large crimson blotch on lip; both produce a profusion of flowers on a bulb and may be had in flower from March to June. *Deppei* is a pretty free blooming species, they are produced on stalks about eight inches long, greenish yellow sepals dotted with purple, the petals are white, the lip being prettily speckled with crimson; this species generally retains its foliage till the new growths appear. *Lanipes* is an evergreen large growing plant producing a great many large flowers, which are creamy white with a beautifully fringed lip. This is a grand midwinter species and will be found very useful for cutting. *Plana* is similar in growth to the foregoing, having fine large flowers with reddish sepals and small white petals ornamented with a crimson blotch—a handsome species. *Gigantea*, though not a showy kind, is conspicuous for its immense flowers of greenish yellow, the ciliated lip having a large maroon blotch on the front, the scapes are two feet long; this is a very strong growing plant, requiring the most liberal treatment.

F. GOLDRING.

Notes From Glen Cove, N. Y.

BY A. E. WHITTLE.

How often is it the case that objects worthy of admiration are all around us and yet are passed by unnoticed, because our attention has not been specially directed to them.

No more striking illustration of this fact can be found than a late experience of the writer. For some time he has remarked with interest the many descriptive and cultural notes of various plants from the pen of Mr. Wm. Falconer, which have appeared in the *FLORIST* and other papers, but having no personal knowledge of this gentleman he felt some curiosity as to the opportunities afforded for the accumulation of so much knowledge.

In order that this curiosity might be gratified, and also for the purpose of acquiring some needed information, a day was devoted in the middle of the month of May to a visit to Glen Cove.

There are several trains to this Long Island village, leaving at different hours during the day from the Thirty-fourth street ferry, New York, but for any one desirous of seeing all that Mr. Falconer has to show, it is advisable to leave New York by the earliest train possible. A ride of about 90 minutes from the ferry brings one to the village, but as the gardens of which Mr. Falconer has charge lie some three miles from the station, it is necessary that some conveyance be used by the visitor in order to reach them, but if notice is sent in time to Mr. Falconer he kindly provides all needed accommodation of this kind for his guests. Mr. Dana, widely known as the editor of the New York *Sun* newspaper, is the owner of these gardens which are situated upon a small island of forty-five

GROUP OF *LYCASTE SKINNERII*, OWNED BY MR. ERASTUS CORNING ALBANY, N. Y.

acres, in close proximity to the main land, and the whole of which is devoted to the making of as handsome an estate as can be found in this part of America.

One of the leading features is the infinite variety of trees and shrubs. The object appears to be to possess one perfect specimen of every species in cultivation hardly on Long Island, for if inquiry is made as to whether any designated tree or shrub is growing on the place, the answer is invariably, "Oh, yes! we have it." Every specimen shows the care that has been spent upon it, for all are shapely and symmetrical, and this is due particularly to the method of pruning pursued, the purpose being to use the knife as little as possible. From the coniferae the superfluous shoots, when young, are removed by the thumb and finger. No grass is allowed to grow near any specimen, but the soil is first forked and then covered by a light mulch of salt hay to prevent evaporation.

During the month of May the visitor will be most especially impressed with the very handsome wistaria that are planted through the grounds and many of which are grown as standards. One, in particular, is alone worth a visit, and could a photograph be taken from it when in full flower, many now ignorant of the possibilities of this plant would be surprised at its rich appearance. As this specimen was not measured the accurate size can not be given, but some idea may

be had when it is stated that it was covered by hundreds of clusters of flowers, in such profusion that but few of the leaves could be seen.

Splendid collections of oaks, maples, beeches, chestnuts, etc., are to be seen, each specimen standing apart from any other, thus giving every individual tree the chance to attain perfection. A broad leaved form of the English beech and a weeping elm are two trees desirable for their beauty. Evidently the laburnum is at home in this section, a well grown specimen being in flower. The double thorus also in like condition. The coniferae are noticeable for the variety and quality. Not a poor tree to be seen on the ground, many quite large and furnished with branches to the ground. A Japanese hemlock is handsome and as it is said to be hardy, growing anywhere, its ornamental appearance makes it more desirable than the form commonly seen. Specimens of the Lebanon and Deodara cedars can also be seen, and though the top of the latter suffers every winter, yet it still retains its place in the collection.

Among the many flowering shrubs to be seen all around two were mentioned by Mr. Falcouer as likely to be of use to florists for forcing purposes, no difficulty being experienced in having them in for Easter: *Exochorda grandiflora* and *Staphylea colchica*. Of the spiraeas the one seemingly most desirable for florists is *trilobata* Van Houttei. A good collec-

tion of viburnums—*Viburnum plicatum* being used for forcing. Quite nice plants are obtained by layering branches, which when rooted are cut off and placed in pots of suitable size. An easy and successful way of providing stock.

Besides the many trees and shrubs planted in a large bed by themselves is a number of hardy and Ghent azaleas surrounded by a belt of *Azalea awamena*. These, at the time of the visit, were all in full flower, and a more beautiful sight it would be hard to find. It is strange that these azaleas are not more generally used for ornamental gardening, since by their luxuriant appearance in this place they prove how readily they can be wintered with safety in the latitude of New York. Also some very fine clumps of rhododendrons, but these were not then in flower.

Growing in the borders are many hardy herbaceous plants. These combined with annuals and perennials offer a constant succession during the spring, summer and fall months of flowering plants. Conspicuous at this time as likely to be of value to the florist, were two candytufts, *Iberis sempervirens* and *Iberis gibraltarica*. These have large and fine flowers and if grown in quantity could not fail of proving at this season of the year most useful for florists' work.

Planted with the shrubs were many clumps of lily of the valley, and the flowers which these were producing were certainly the finest the writer has ever

seen, flower stalk strong, erect and covered with large bells. Mr. Falconer stated that he does not depend upon imported pips for forcing, but uses his own clumps which give him far finer flowers than any he can gather from foreign stock. He lifts the clumps and plants them in flats in the fall, taking them into the houses as he needs them for succession during the winter. Those that are forced one winter are planted in the borders next spring, and are allowed to remain there undisturbed for the two summers and winter following. The secret of their vigorous flowers and leaves is the abundant use of manure in the ground. Why should florists depend upon Europe for lily of the valley when such first class results can be obtained from home grown stock? Besides, Mr. Falconer states that he cuts his first flowers of valley in January, quite as early as any that can be gathered from imported pips.

That part of the estate which is devoted to the growing of vegetables and fruit is a model of cleanliness and system. Not a weed to be seen. Not a tree or bush but what is of handsome shape and wherever needed receiving the proper support. A large vineyard and rose arbor all add to the attraction.

Mushrooms are apparently grown to perfection. A cellar excavated for this purpose, lined and arched with brick, two or three openings being left at the top for ventilation. Artificial heat, of course, is provided in the winter. There is not a large range of glass. The plants, however, that were inside bore witness to the skill of the cultivator. Gloxinias and calceolarias were noticeable for good growth and handsome flowers.

Such is a brief description of a well ordered place. A garden in which every lover of horticulture will most assuredly delight. To find so much variety and all the work well done shows the comprehensive and thoroughly trained mind of the one who cares for this establishment. Flattery is always to be avoided, but well merited praise should ever be freely given. Mr. Falconer is an enthusiast, caring nothing for labor so that his eyes and heart may be gladdened by the vigor and beauty of the plants he delights in. His knowledge is gained by the most careful and thorough study. For fifteen years it has been his habit to collate all the facts that can possibly be known concerning the innumerable plants of which he has had charge. Note books are filled with items relating to the time of flowering, duration of bloom, etc. of every flower that opens in these gardens. So thorough a system is a lesson to us all. To trust too much to the memory is a fault in which many of us indulge, but as we grow older experience teaches us that memory is exceedingly treacherous. A constant carrying of the note book and the instant writing in it of whatever may impress the mind concerning the work in hand is the true way.

It is pleasant to me to be able to direct attention through the pages of the *FLORIST* to a comparatively little known place. The ability of the superintendent is only exceeded by his hospitality, and any one of our number who sincerely admires plants, should he visit Glen Cove may be assured of a hearty welcome, provided he gives Mr. Falconer due notice.

Albany, N. Y., June 3.

NEW FRENCH PÆONIAS.—J. T. Temple, of Davenport, Iowa, sends us a basket of cut blooms of these which are very

fine. Some very deep crimson and white with crimson being especially noticeable. The range of colors shown is also very complete.

A short time ago I saw in the *FLORIST* an inquiry from some one asking how the Mme. Lambard rose behaves as a winter bloomer.

I have had them on the bench on two or more occasions, and found them as far as mere blooming quality is concerned, quite as free as *Mermet*, if not more so. It is a more vigorous rose than *Mermet*, consequently more easily managed. Buds come singly on strong shoots with rich dark foliage.

The buds are shorter than those of the *Mermet* and not so delicate or finely recurved at the point, for which reason if it be a choice between the two kinds. The *Mermet* is decidedly to be given preference as a winter bloomer.

ERNEST WALKER.

New Albany, Ind.

Roses for Market Plants.

Mr. W. K. Harris, a large Philadelphia grower of pot roses for market, confines himself mainly to a half dozen varieties. *Jacqueminots*, *Magna Chartas* and *Hermosas* constitute the bulk of his spring market roses in pots, while *Nerous*, *Malmaisons* and *La France* are grown in smaller quantities. A few other varieties are grown for the purpose, but those above named constitute four fifths of his stock.

Mr. Wm. Coldfish, a neighboring grower, finds *Hermosa*, *Queen's Scarlet*, *Jacqueminot*, *La France* and *Magna Charta* the best for market plants, the bulk of his pot roses this spring being of the three varieties first named.

New Rose Climbing Perle des Jardins.

This is a sport of the well known *Perle des Jardins* which has originated with Mr. Charles Anderson, Flushing, N. Y.

The flowers are almost identical with the *Perle*. In habit it is a vigorous climber, and it will undoubtedly prove a valuable rose for the south.

The illustration shows a cluster of blooms cut from the original plant. A photograph of the plant, which accompanied that of the flowers, shows a very vigorous growth, well covered with bloom.

The "Wootton" Rose.

This rose has been advertised and sent out as perfectly free from "spot." That is not correct, for I sent to Mr. J. Cook for 100 plants of it and when they arrived the majority of them were badly affected with "spot," and at present the leaves are showing the disease as fast as they appear, in fact it appears to take "spot" quite as easily as the *Bennett*. I would be glad to hear if "spot" has appeared on any other stock of this rose, or is mine the only case. JOS. BENNETT.

Montreal.

MR. CARMAN writes to us about his hybrid roses: "Another of our hybrid roses has bloomed. The mother is *Rosa rugosa*, the father *Harrison's Yellow*. The hybrid, so far as the bud and flower are concerned, is a perfect *Gen. Jacqu.* The same odor, color, size, number of petals, etc. The plant is a *Rosa rugosa* with the wrinkles and leatheriness of the leaflets modified. The leaflets are much larger than those of *rugosa*. Now, this plant is a perpetual bloomer—just the same as *R. rugosa*. It is as hardy as any rose I have ever grown. The plant is four feet high and bears to-day (June 1) 165 buds."

THE ROSE GARDEN, BY WM. PAUL — A copy of the ninth edition of this well known work is at hand. Mr. Paul's book has long been a standard work on the rose, and to those familiar with it but little need be said except that the new edition contains several new features and the lists of varieties are corrected up to date of publication. It is certainly indispensable to the library of any one interested in roses, and the twenty excellent colored plates which it contains makes it a very attractive book for the amateur. While the text is written from an English standpoint, and many of the cultural directions should of necessity be varied by American growers to suit the difference in climate, the book is otherwise of equal value to all alike, and the chapters upon cross-breeding and hybridization can not fail to be of interest to all rosarians. Published by Kent & Co., London.

Arboretum Notes.

Among the brightest flowers to be seen now are the *genistas*. A very pretty little thing is the *Genista Germanica*. It is but a foot in height and the pendant branches are covered with dainty little yellow flowers. The *Cytisus scoparius* or English Broom is simply loaded with great masses of brightest yellow bloom. It makes a glorious display. Why would not this old plant make a good subject for forcing? Yellow is in demand for many occasions in the winter, and here is to be found pure color, and an abundance of it. *Cytisus albus*, the White Broom, is just past its prime.

Two varieties of *Robinia hispida* now in bloom are strongly recommended by Mr. Dawson for forcing. They are both bright rose colored, the light shaded one being one week earlier than the darker one.

Of course the well known favorites *Deutzia gracilis*, the White Fringe (*Chionanthus virginica*), the Snow Ball (*Viburnum opulis sterilis*) are now at their best. There are very fine specimen plants of all these in the grounds.

The *Philadelphus* group is now beginning to look quite gay. *P. coronarius* var. *Schrenkii* is one of the earliest, being about ten days in advance of the others. *P. speciosus* has magnificent blossoms of purest white, measuring 2½ inches across.

In *spiræas* the *Japonica* varieties are just coming into bud. There are still left of the early flowering section *Spiræa trilobata* and *S. Cantoniensis*. The latter comes in both single and double forms and was formerly known as *S. Reevesii* and *S. Reevesii* fl. pl.

There are in the Arboretum about forty varieties of *weigelia*, many of them new. Among the best are *candida* and *alba nivea*, both white, *Lovii* dark red and *Van Houttei* rosy pink.

Lonicera caprifolium, the old favorite

NEW ROSE CLIMBING PERLE DES JARDINS

honeysuckle, is to be seen in bloom now in many varieties. Among the shrubby *loniceras* one of the prettiest is *L. Albertii*. This has fine foliage and delicate pink flowers borne on graceful drooping stems. It is deliciously fragrant. *Lonicera ciliata* which bloomed in April is now covered with bright scarlet fruit, which is even prettier than the flowers.

While searching distant parts of the earth for new and beautiful shrubs we have in some cases overlooked valuable things right at our own doors. There are few prettier white flowering shrubs than the *Vaccinium staminum*, found about Amherst, Mass., and more commonly known as the Deer Berry. It is worthy a place in every choice collection and would be a valuable addition to our forcing shrubs.

The Killarney Heaths (*Daboecia polifolia*) are now in bloom and will flower all summer. They are graceful little plants, about one foot high with flowers either white or purple. The only *andromeda* in flower at present is *A. Mariana*. It is one of the best, with very large white bells. The *kalmias* are just beginning to open their buds.

The *rhododendrons* are now in their glory. The hardy *azaleas*, which by the way are all *rhododendrons* now, are to be seen in all shades of color. Some seedling Ghents raised by Mr. Dawson are equal to the finest named varieties, and a number of seedlings of *R. calendulacea*

raised from seed gathered in the mountains of North Carolina do not suffer in the least by a comparison with the best imported Ghents.

We seldom get anything which is hardy in Massachusetts from New Mexico, but we have one very good shrub from that locality which is perfectly hardy, the *Lyceum pallidum*. The foliage is of a glaucous green, and the pale solanum-like flowers hang in pretty bells from the under side of the twigs.

Among the newer and rarer things now in bloom are *Jamesia Americana*, a Rocky Mountain plant with flowers resembling *Deutzia gracilis*, *Photima villosa*, a Hawthorn-like shrub from Japan, and *Syringa villosa* from the mountains of Pekin. The latter is valuable as being a late flowering variety, blooming after all the other lilacs are gone.

There are quite a number of roses now in bloom. The finest of these by far is Mr. Dawson's dark red variety of *R. rugosa*. The flowers are almost as dark in color as a *Jacquemint*. Among the prettiest single roses are the many varieties of the Scotch rose (*Rosa spinosissima*). WM. J. STEWART.

Boston, June 1, 1889.

ARECA SANDERIANA is a palm but little known in this country, but its good qualities will undoubtedly bring it into prominence as an excellent palm for trade purposes. It has richly colored leaf stems and veined leaves. It has

impressed growers so favorably that stocks are being worked up in anticipation of a demand.

Long Island Notes.

BY WM. FALCONER.

THE FLOWERS of *Magnolia parviflora* are the most fragrant blossoms of any kind whatever now in our place, and they are lovely. But oh, how the rose bugs love it!

MAGNOLIA HYPOLEUCA is now in bloom and for the first time with us. It is a rare Japanese species, not unlike our *M. Umbrella*. The flowers are large, creamy white and deliciously scented; at the same time I like *M. parviflora* better.

OUR BEST white lilac is *Marie Le-graye*. Not only are the panicles of immense size, but they are produced in extravagant abundance, and the plant is a capital grower.

AMONG DOUBLE FLOWERED LILACS *Lemoinei* fl. pl. is one of the freest blooming and most distinct. Its color is bluish lavender. But I prefer single flowered varieties.

WHILE THE white fleecy lilacs as *Syringa Japonica* and *S. Amurensis* are desirable garden shrubs, I don't think it would pay to grow them for forcing.

SYRINGA VILLOSA will, I think, when it gets plentiful enough, commend itself for forcing purposes. We do not know enough about *S. pubescens*, and the *S. Pekinensis* we see so much about has not yet, so far as I can find out, blossomed in this country.

SNOWBALL SHRUBS.—All things considered I look upon *Viburnum plicatum* as the best of all the snowballs, at the same time I must admit that *V. rotundifolium* is earlier, as prolific and if anything, has larger heads of flowers. Both can be forced with the greatest ease and had in bloom at any time after New Years you wish. Don't throw them away after they are forced, but plant them out and give them a two year's rest, then force them again. I raise our plants by layering. Take good sized branches and elbow them into the ground; they root well inside of a year. Then separate, plant out and grow on for a year and one will have nice flowering stock.

ORIENTAL POPPIES are now in bloom, and what splendid glowing flowers they are. If you cut the flowers before they are fully open and especially before the anthers burst and spread the pollen, these fiery blossoms will last in good condition for two or three days. Even if you don't use them in cut flower work, aren't they worth growing for decorating your window? They are long-lived perennials and will grow and thrive in dry land or sandy land, but of course good soil and an open position suits them best.

IRIS PALLIDA is also in bloom. One of the boldest and noblest of irises. The blue form is the best. Perfectly hardy and a rank and rapid grower. Capital for cutting with long stems and using for large decorations, hall vases or the like.

OF *IRIS SIBIRICA* we have many varieties more or less meritorious, and all of them seed around, grow up and blossom with the freedom of weeds. The variety called *sanguinea* is the best and as free a weed as any.

THE GERMAN IRISES are now in their heyday and a gay lot of hardy flowers they are too; at the same time there is a good deal of commonness and lack of brightness among them. But they are hardy, easy to grow and sure to bloom,

KÄMPFER'S IRISES won't be in bloom for a few weeks to come—generally about the last of June.

HALLOCK'S TREE PÆONIAS are the grandest things in the way of flowers I have seen for many a day. Most of them are single. They run in color from white and pink to deep crimson, and are of enormous size. He imported them directly from Japan. We have ordered every variety, and this is the best recommendation that I can give them.

PYRETHRUM ULIGINOSUM.—Those of your readers who have got a stock of it should advertise it. Most every day I have applications for it. The people want it and don't know where to get it.

THE GLADIOLUS-FLOWERED CANNAS.—You ought to grow a lot of them. They are dwarf, very showy and free flowering, and not only fitted for planting out doors in summer, but they make handsome indoor blooming plants in early spring. Don't store them dry over winter as you would a common *Canna Indica*, but keep them growing a little as you do *C. Ehemanni*.

THINKING OURSELVES smart we ordered a full set of the finest and newest of these cannas last fall in London, and to be forwarded here in October or November. I thought if we got them then I could grow them on all winter and before planting out time next May, have a nice little stock of each variety. But Johnnie Bull was cute enough, and it was the 23d day of May before we got our cannas. Each plant was a single shoot 8 to 14 inches long and in a 4 inch pot, but all arrived in superb condition.

ONLY A MULLEIN (*Verbascum Ol ympicum*), but, oh, so grand! Five to eight feet high, branched from the bottom to the top, and a golden yellow candelabrum from May into June. It is a triennial, not extra hardy, and its large, broad whitish woolly leaves form a rosulate mass five to seven feet across. It seeds freely and the seeds grow readily. A splendid plant for bold effects in parks.

SALVIA NUTANS, although an old plant, is very scarce in cultivation. It is a hardy perennial, three feet high, very floriferous, and its flowers are bluish-purple, in racemes terminating the long branched spikes. Showy as a border flower and now in its heyday. Propagated by seed or division.

THE GOLDEN COREOPSIS (*C. lanceolata*) is now in bloom and will last in all its golden glory throughout June, then sparingly for a little while till it recovers from its first great splurge when it will again bloom considerably throughout late summer and fall. Now, note this point: Established plants bloom full in June; plants that have been transplanted in April or about the first of May bloom full in July, so too will old established plants cut back early in May. Every florist should grow this plant. It is a hardy, herbaceous perennial, easy to grow, copious to bloom and the finest yellow flower of its season. With me it seeds abundantly, but this free seeding is not general. Mr. Nicholas Hallock at Creedmoor tells me it doesn't seed at all with him. And I know the seed is scarce in Europe, for some big European houses had to buy their seed last season in this country.

IN THE FLORIST, page 494, July 15, 1887. I wrote regarding this coreopsis: "North of New York it will not likely bloom the first year from seed." Apropos of this, William Stone wrote in the next number of the FLORIST, page 518, August

1. "I have it now budded from seed planted this spring, and my experience with it is that it will bloom as early as annuals generally." The annual coreopsis such as *C. Drummondii*, *C. coronata* and *C. tinctoria*, if sown out of doors in April come into bloom from June into July, but this *C. lanceolata* has never done with me; indeed, I have no reason whatever to modify what I then wrote. But as I have plenty seed of 1888 gathering, also young plants and open blossoms of the finest form of *C. lanceolata*, if Mr. Stone sends me his address I will gladly let him have seeds and plants gratis and flowers for comparison.

DOUBLE PYRETHRUMS.—These are among the choicest of hardy perennials; there is nothing trashy about them; you can use them in any decoration you please and associate them with maiden-hair fern or plumosa asparagus. They are more refined than the best double China asters, and they are in season from the end of May and throughout June, at a time when you can not have asters without a good deal of trouble. But with these pyrethrums we have scarcely any trouble; they are perfectly hardy and only require good ground, good drainage, shelter from wind and to be lifted, divided and replanted every second year. But florists in their rapacity for increase of stock will be apt to divide them every year. The flowers are full double and in color run from pure white through blush, pink, rose and to deep crimson, and, curious enough, the pure white ones are among the toughest and best growers.

DOUBLE PYRETHRUMS FROM SEED.—Get a good strain, that is, from a reliable source. The seeds germinate readily and the young plants grow quickly and most of them will bloom the first year; you will only have a few fair doubles, a few semi-doubles and a good many singles, but altogether a pleasant combination. Although from seed is an easy way to get up a big stock of plants I do not think it will pay the cut flower florist; he had better have the finest full doubles to begin with and increase these and stick to them.

SINGLE PYRETHRUMS.—These are beautiful. In England they make a specialty of single pyrethrums, and the seeds of the choicer strains cost just as much as do those of the doubles. From a packet of "finest single varieties" we get many handsome flowers—white, rose, pink and crimson, with a preponderance of pinkish. The proper thing to do here is to select and keep the choicest and weed out and throw away the poorest. Although not as choice as the doubles they are well liked among cut flowers. The variety known as *atrosanguineum* is a beauty, a deep bright crimson red. As we have nothing else like it at this time of the year it is both striking and taking. The singles are a little rank in habit; the doubles are not. It is real nice to have a big lot of these pyrethrums come in at Decoration Day. And if we have them in beds so that in the event of the season being late we can quickly erect a temporary frame around them with sashes on, we can hasten or retard them to suit the season.

PYRETHRUM ULIGINOSUM.—This plant figured in the FLORIST, page 465, May 15, is also figured and written about in the *Gardeners' Chronicle* of May 25 last and just to hand. E. Jenkins who writes about it, is an enthusiast in floriculture and the owner of one of the finest gardens near Edinburgh. After extolling

its merits generally he tells us how he succeeds in dwarfing it from a 6 foot high to a 3 foot high specimen without impairing its usefulness as a decorative or flower yielding plant. "To reduce this plant" (to 3 feet), he says, "I simply cut it down to within 4 or 6 inches of the ground in the first week in June, at which time it will be 1½ to 2 feet high, allowing it to grow again at will. * * In this way I get a bed of white blooms 3 feet high with all its beauty revealed, and the number of flowers considerably increased by reason of several breaks resulting from the pruning process. * * Last season * * I only cut down the half of my stock. The difference in flowering, however, was but slight, those which were not pruned flowering just a week earlier."

PYRETHRUM ULIGINOSUM is the name used in the FLORIST, it is also what is used in Nicholson's Dictionary, but the *Gardeners' Chronicle* (most excellent botanical authority), gives it the name of *Chrysanthemum uliginosum*. When botanical authorities differ what are we poor florists to do? "Now that's a case for the Committee on Nomenclature" some may suggest. No. A committee of practical florists can not tackle botanical questions, they've got work enough among florists' flowers.

ROSA RUGOSA.—We have a solid mass 25 feet square of this handsome rose. It is not handsome in the same way as a *Mermet* or *Jacq* is handsome, but as a shrub. Its foliage is the finest of any rose in cultivation; its habit dense but vigorous, and it is very hardy, early and free blooming and fragrant. This spring it began blooming May 13, and the first *Jacq* roses were not in bloom till May 29. Otherwise *Rosa alpina* var. *glandulosa* is our earliest rose; some years it is ahead, and at other times *rugosa* is ahead. As the rose bugs do not come around till about June 1, with *rugosa* we have at least ten days good bloom unmolested, but with the hybrid roses the bugs take them from their first appearance. Although *rugosa* bears an immense crop of flowers in early summer it also continues to bear a few all summer long. And in fall its large red hips which are borne in quantity add much to its attraction. The white flowering variety (*R. rugosa alba*) is in every respect as good, hardy and free blooming as is the typical red flowering form and is one of the loveliest shrubs in cultivation. There is an idea that it doesn't set hips here, but this is erroneous; our plants of *alba* always bear fruit, have lots of fruit as big as gooseberries now, and I have a lot of seedlings raised from our own saved seed. One great advantage of this rose is that it thrives and flowers splendidly in hot, dry, sandy ground, and as it forms such a solid bush it shades the ground for itself. It is a great favorite with landscape gardeners, and the supply of it does not equal the demand.

ROSA RUGOSA KEISERIN DES NORDENS is a double flowering form that we imported last year from Berlin, and we now have six good plants of it in bloom. It may be a form from *rugosa*, but it is not a true *rugosa* nor anything nearly as good. As a foliage plant it is vastly inferior to the common *rugosa*, in fact no better than, if as good, as *Zuccariana* and much poorer than *Kamschatica*. It is about as double flowering as *Jacq* and of the purplish crimson color of *Jacq* when a few days old.

HAIL INSURANCE.—Those desiring hail insurance should address John G. Esler,

PYRETHRUM (CHRYSANTHEMUM) ULIGINOSUM. SEE OPPOSITE PAGE.

secretary, Saddle River, N. J., for full particulars, blank applications, etc.

New York Notes and Comments.

The dead season has certainly arrived as far as the flower trade is concerned. There is really nothing doing among the uptown florists, and the streets are stocked with the outdoor venders. Baskets of magnolias are to be seen every where, and great bunches of kalmia, as well as outdoor roses and other garden flowers. Prices are of course very materially lowered; in fact they have averaged

lower all this season than the season previous.

Several new roses are promised us just now. One valuable trade acquisition is a sport from Anna Alexieff, originating with Julius Roebrs, of Rutherford, N. J. The color is almost identical with the parent, but the flower is very much larger, the petals thicker and firmer in texture, and without the crumpled tendency we often see in the Alexieff. An improvement in every way on the parent, and, sharing in its early blooming qualities, it is sure to be a big success.

Another new rose is the climbing

Perle des Jardins, belonging to the John Henderson Co. It presents all the leading characteristics of the ordinary Perle; its climbing habit is the sole exception. It is evidently a very beautiful rose and will naturally excel the old favorite, Niel, in its constant blooming.

Yet another new rose is one of the singular hybrids raised by Mr. Carman, of the *Rural New Yorker*, cross between Rosa rugosa and Harrison's Yellow. This rose has a bright crimson flower, similar color to Jacq, double and very fragrant. Fragrance rather like a Jacq, but with a tinge of Rosa canina odor. The foliage

is very thick, strong and well marked, like rugosa. The rose is very hardy and blooms incessantly from late in May until frost kills the leaves. The leaves seem to be absolutely impervious to insects. There is no doubt that this will be an admirable outdoor rose, its vigor, hardiness and incessant blooming are the qualities that will make it popular. Offers have already been made for the stock, but Mr. Carman wishes to see how it will behave for another season. It is as yet unnamed. One of the most remarkable things about the rose is that such parentage should produce this vivid crimson. Another plant in the same strain had a single five-petaled flower. The base of the petals was pale yellow, forming a ring around the corolla; next to this was a band of pink, while the remainder of the petal was pure white, thus giving a distinct banded tricolored flower. This plant had eleven very small leaflets.

Railroad bedding seems to be on the increase, most of the suburban roads are making a good display this year. Much of the bedding was injured by the cold storms of the last week in May, the plants being in many cases much knocked about. A good deal of the bedding stuff was rather feeble to begin with, and it soon becomes the worse for wear in a gale of wind and rain.

Ipomæa Learii, now known by the popular name of Blue Dawn, is a very attractive member of its family—beats the ordinary blue morning glory completely. Its color is a very clear, lively blue and it seems to possess all the virtues we look for in the family.

Fine strains of poppies will be found very useful through the summer for cutting, as well as for making a handsome bed. Several of the improved strains are specially handsome, and they provide a mass of fine blooms all through midsummer. A good many of these familiar flowers are coming more into vogue; people think more of them than formerly.

Judging from the local flower market pansies take first rank as popular bedding plants in the spring; a little later the call begins for geraniums and coleus. *Calceolarias* would certainly sell better and more extensively if they were more plentiful and better grown; no one wants little dried up plants with a few tiny dull flowers. Symmetrical dwarf golden *calceolarias* always seem to take in the retail trade.

City florists are already complaining that everyone has left town; the season becomes shorter every year, and it very materially cuts off the florists' profits.

Decoration Day was tolerably profitable, perhaps more profitable in proportion to out-of-town florists, because New York was rather used up by its Centennial. This certainly affected the public celebrations, but naturally there was a good deal of private buying for decoration. Like every holiday Memorial Day brought out the increased demand for loose flowers and pot plants in preference to designs. A number of terrific designs in colored immortelles were seen, but they were the exception rather than the rule. Taste is improving greatly in this direction, to the very great benefit of the trade.

EMILY LOUISE TAPLIN.

The Moonshine Flower.

Precisely! *Ipomæa Bona-nox*, *noctiphon*, *noctileuca* or what not, is the "Moonshine Flower" that has drawn the

hawbees. The East Indian people have the priority however, having applied the term to *I. grandiflora* before Europe had a written language—or America. Mr. Veitch gave the differentiation years ago.

JAMES MCPHERSON.

The Best White, Best Pink and Best Yellow Chrysanthemum.

Mr. Linegar does not say for what purpose he requires the three chrysanthemums, or whether they are to be pompons, Japanese or Chinese.

Here are three to grow in pots for market: Mrs. L. Canning, white; Gorgeous, yellow; M. Boyer, pink. These have compact habits, healthy foliage, good flowers and decided colors, important properties to possess.

Three to grow as cut flowers for market: Mrs. L. Canning, white; *Grandiflorum*, yellow; M. Boyer, pink.

Three to grow as cut flowers for exhibition: The Bride, white; Mrs. W. K. Harris, yellow; Mrs. Fottler, pink.

Three to grow as specimens for exhibition: Mrs. L. Canning, white; Mrs. R. Elliott (or Gold), yellow; Mrs. Irving Clarke, pink. All the above are Japanese.

Three Chinese good for general purposes: Mrs. Heale, white; Pres. Hyde, yellow; Mrs. Weston pink.

Three pompons are: La Desiree, white, early; Mlle. Elize Dordan, pink; La Vogue, yellow.

JOHN THORPE.
Pearl River, N. Y.

In Memory of Mr. Court.

A committee has been formed to solicit contributions to a fund for the purpose of erecting a suitable monument over the grave of the late William Court. Any surplus over the amount needed for this purpose will be handed over to Mr. Court's family. Mr. Robt. Craig, 49th and Market streets, Philadelphia, is chairman, and Mr. A. D. Cowan, 114 Chambers street, New York, treasurer of the committee.

OBITUARY.

HEINRICH GUSTAV REICHENBACH died at Hamburg, Germany, May 6, at the age of 65. He was the recognized authority on orchid nomenclature and was widely known for his extensive knowledge and writings on orchids, to the study of which he had devoted a great portion of his life. *Reichenbachia*, the sumptuous periodical devoted to orchids, published by Sander & Co., was named for him and he was connected with it at the time of his death. Orchid lovers the world over will learn with deep regret of his death.

PHILADELPHIA, JUNE 9.—Flowers are at present retailing at following prices per dozen: Perles 75c. to \$1; Mermets, Brides, La France \$1 to \$1.50; Gontiers 50c. to 75c.; Bennetts 50c. to \$1; hybrids \$3; Jacqs. \$1 to \$2; carnations, long stems, 35c.; *stephanotis* 35c.; valley 75c.; water lilies 25c.; pansies, mignonette and cornflowers 25c. per bunch of 25 blooms.

Greenhouse Construction.

BY JOHN N. MAY.

III.

[Continued from page 443.]

As soon as the siding is completed take the end rafters, Fig. 5, cut the front or long one so that the glass line strikes even on the edge of gutter where it is dug out for water—see Fig. 2, page 443, or if plate like Fig. 3 is used the glass line should come even with top edge of same. Before cutting the rafter it helps matters considerably to have a piece of the plate plumed on top end, then hold the back

and front rafter in their proper position and match both at the gutters and at the ridge; this ensures getting the right bevels all around. When this is done cut the ends of each

true, fit it up to see if the joints are all right, then put up ridge plate—Fig. 6; level it from end to end, stay it also in as near a straight line as possible, having first made sure that the groove is plowed even from end to end. I prefer to have these plates in 20 foot lengths and they will need to be 22 feet long to allow for the joints, which should be halved together with a splice of 10 or 12 inches; they should not be less than 2x8 inches. The plow groove should be 3½ inches from top side, this allows for the bars to come even on both sides.

Next put up the purlin, Fig. 7, which can be made of 2x6 inch pine, same lengths as ridge plate, jointed etc. the same way. This purlin should be in the center of long rafter from the gutter to ridge plate. The front rafter or bar when cut ready to nail up should be as near as possible 16 feet on the glass line and the back one 6 feet, and when fastened up will form a roof similar to that shown in Fig. 8. Next make a pattern for each run of bars, one for the back or short ones and one for the long ones; cut several of each and commence next to the end first, plumb and square the end one to see that you start right, then take three gauge sticks one-twelfth of an inch longer than the width of the glass intended to be used (be sure they are all exactly the same length), place these in the groove or rebate where the glass is bedded, then bring the next bar up to same point on each nailing place; but before nailing

them the ends should be well leaded where the joint comes, also on the plates, this is a great protection against rotting.

Another great advantage I have found in building is to use the sunken groove on the rebate of the bars—see Fig. 9. This when the glass is bedded down close and secured with tacks completely wedges the putty in so that it remains there as long as the glass does; the bevel need not be more than one-sixteenth of an inch deeper on the inside to secure this.

Where continuous ventilation is to be used from end to end of the house it is not necessary to have every bar in the front run right to the ridge, but have each alternate one—16 feet long—to run

Fig. 5.

Fig. 6.

Fig. 7.

Fig. 8.

to ridge and every other one 13 feet long, and if secured at the purlin the top can be left loose till all the roof is up. Then take header—see Fig. 10—which has a groove for the top edge of the glass, cut these in to fit nicely between each two long bars, cut the short ones off all on a line so that they nail squarely on the Leaders, which should be placed to allow

fully one inch to be below the bottom of the sash when it is fitted up in its place. If the sash is 3 feet deep, which is about the right size, the header should be fitted for the bottom edge on glass line to be 3 feet from the ridge plate, this allows for bevelling of the sash on top to fit plate and then set slightly more than one inch up on the header; this allows also for the hinges to screw tight down on to the same and on to bottom edge of sash; but to avoid making any mistake it is best to fit a sash up in its place and then mark the place for the header. In putting the sash on I very much prefer to hang them at the bottom and open at the top, it is also very important to use either brass butts or galvanized iron ones with brass pins; I prefer the latter and use altogether what is called a $2\frac{1}{2} \times 1\frac{3}{4}$ wrought butt, galvanized as above noted. I use three of these to each of the sash, which are between 6 and 7 feet long, according to width of glass used.

If preferred an angle iron purlin can be used instead of wood, but it costs more. If such is to be used then a correct calculation must be made so that a hole for a screw can be made to fasten each bar in its place; this must be done at the factory else the expense would be very heavy, and if it is decided to use this kind of a purlin arrangements should be made whereby the column can be fas-

tened to it at intervals of from 8 to 10 feet apart, otherwise the roof will soon get out of shape on a length of 16 feet, particularly if a heavy fall of snow should get on the roof. In putting the columns under the purlin it adds very considerably to the strength of the roof to spring it up about half an inch above the straight line, this makes it slightly rounding from the gutter to the ridge plate.

Next get the ventilating sash all fitted and fastened on with butts as described above. The size of these should be made to suit and match whatever size glass is used in the house; if 12-inch glass then the four center spaces in the ventilator should be for 12 inch and the two outsides for 10 inch, this allows for the stiles. If the rebates are made true on $1\frac{1}{4}$ -inch bars—see Fig. 9, the sash will be 6 feet $5\frac{1}{2}$ inches long by 3 feet deep and the head should be 3 inches wide, the bottom rail four inches wide; this allows 30 inches of glass, or two lights each 15 inches long. The length is suitable for any other width and the same calculation for 2-inch narrower glass at each end. When the sash are completed the cap strip, Fig. 11, should be put on, and if the plate has been kept at its proper height above the glass line on the long rafters, the sash will clear it

Fig. 12.

on opening about one-fourth of an inch. Next take the triangular strips, Fig. 12, which should be fitted to an even bevel with the glass line of bars, cut to fit snug between the same and nail in with small finishing nails. Then take the small square strip, Fig. 13, nail on outside edge of gutter; these two strips make the gutter deep enough to carry all water off in the heaviest storm. Now prepare and

Fig. 13.

put on post the end plate, Fig. 14; this is plowed for the siding dips, etc. just the same as the main plates. The siding both inside and out and paper sheathing should be arranged in same way, and putting these ends up the proper calculation should be made for doors.

I use altogether doors 3 feet wide by 7 feet high; the main or hanging jamb I put directly under the ridge plate, and make it of 3×4 inch stuff, rebated out $1\frac{1}{2}$ inches deep for the door to shut into, the other jamb is the same size and runs up to the end rafter; they are fastened to a hard wood sill let into the posts which are placed at a suitable distance to allow it. This braces the whole end, keeps everything in good shape and puts the door in the most convenient place for all purposes. The plates on the ends should be placed so that the glass line comes even and level with the glass line of the roof; the end bars are placed at suitable distance for glass same as on roof, and the top edge of end glass will fit up into groove of end rafter—see Fig. 5. Care should be taken to make the head over door wide enough to carry off drip.

Florists' Hail Association.

The Oak Grove Cemetery Association acknowledges the prompt payment of their loss by hail on the 16th of last month. The loss was fortunately slight, but it nearly equaled the membership fee and first assessment. The loss was promptly paid without undue fuss or trouble, and if there is a florist in America who is not protected, he is making a grave business mistake, and should at once place himself in communication with J. G. Esler, Secretary Florists' Hail Association, Saddle River, N. J.

J. W. LOSLEY,
President Oak Grove Cemetery Association, La Crosse, Wis.

Chicago.

Mr. Joseph Curran, for many years with Chas. Reissig, and one of the most popular young men in the trade in this city, was married May 23 to Miss Jennie E. Wood, also well known to the trade here. The wedding was intended to be only a quiet affair, but Mr. Curran's florist friends turned out en masse. The presents were numerous, among them an elegant solid silver carving set from members of the Florist Club.

The Decoration Day trade was very satisfactory. There were not enough flowers—especially of roses—to supply the demand, but there was not so great a scarcity as was feared at one time.

The Florist Club at its last meeting made preliminary arrangements for transportation to the Buffalo convention.

TOWANDA, PA.—Geo. H. Cox has built three houses 40×20 .

BUFFALO, N. Y.—Adams & Nolan have opened a florist store at 302 Main St.

PHILADELPHIA.—Chas. D. Ball is building several new houses at his place in Holmesburg. They will be used for growing young palms and ferns.

UTICA, N. Y.—New greenhouses have been built here as follows: Chas. F. Baker three, 20×80 each; E. T. McQuirey three, one 100×20 and two 100×11 each; Peter Crow six, two 90×20 , two 90×17 and two 75×17 ; Frank Riley one, 80×20 .

PLANT DECORATIONS.

The call for palms and other decorative plants is decidedly on the increase, and they certainly are a most attractive feature in decorations supplied by the florist. A pair of handsome palms judiciously placed adds an effect which is always admired, and the use of these stately and graceful plants in conjunction with arrangements of flowers gives the florist a much wider field in which to display his skill.

A common error is to use them too freely. The parlor, church or banquet hall should not be turned into a conservatory. While a half dozen specimen plants placed at effective points around the room are admirable, to mass them thickly everywhere is not only a waste of plants but results in the creation of a heavy, somber effect which should be avoided. The too free use of flowers alone is equally objectionable; but when the more brilliant colors of the flowers are softened by contrast with the beautiful green of the palms, the effect upon the eye is pleasing without soon becoming tiresome as is apt to be the case where great masses of flowers alone are used.

The art of effectively arranging either plants or flowers lies in placing each individual plant or blossom where it will show all of its own grace and beauty, and at the same time assist in the general result without detracting from the effectiveness of any other individual plant or flower through the creation of inharmonious contrasts in either form or color.

In the arrangement of palms and like decorative plants harmonious contrast in form is the main requisite. But how often do we see really handsome specimens crowded together in such a way as to form merely an even hedge of foliage without contrast, the grace of each individual almost entirely lost to the observer through being buried among a lot of others. Use your plants of doubtful quality for a background but bring your specimens up where they may be seen and admired, and where they will form an harmonious contrast in form and foliage with others. By the exercise of taste and skill in arrangement a small number of plants can be made more effective and satisfactory to the customer than a larger number massed together without them, and this means good returns for a smaller cash outlay.

A mistake made by many florists is to rent out their decorative plants by the wagon-load. Palms and similar decorative plants should be rented by the pair or single specimen; and one-fifth of the value of the plants should be received for their use at a decoration; this ensures a fair profit after the cost of getting the plants into condition again is deducted. And the customer will not be so apt to find fault with the bill if it is made for the "rent

of — pairs specimen plants," rather than for "one wagon-load" or more. Of course for small flowering and foliage plants rental by the wagon-load may be advisable, but specimens should be rented by the pair or single specimen only.

THE NEW YORK CUT FLOWER MARKET.

The accuracy of our quotations on cut flowers in the New York market has frequently been called in question by readers and we admit that they hardly express the true condition of that market. Still they are probably as nearly correct as possible except through an hourly bulletin. The New Yorkers may be considered extremists in their faithful obedience to the law of supply and demand. The sensitiveness of the New York market is in fact most remarkable. Prices have been known to advance 100 per cent. upon receipt of intelligence that a florist from another city had arrived, presumably for the purpose of buying.

The prices which we quote are what flowers are billed at on orders to be shipped, but in times of surplus they are sold over the counter at much lower rates.

Those who order by letter or telegram are however rarely given the benefit of any fluctuation in their favor, hence the quotations are fairly accurate for buyers outside of New York and vicinity.

The policy of the main New York cut flower commission men has been such as to discourage orders from other cities. As one well known commission man remarked "when flowers are scarce we can sell them all here at good prices, and when there is a surplus, we get only small orders from outside and they are rarely worth bothering with."

At a recent date when there was a heavy surplus in the market the daily transactions at a leading cut flower commission dealer's were noted as follows: At 8 a. m. some flowers began to arrive and at 9 the place was filled with boxes of flowers and buyers. The buyers picked out what they wanted, placing in convenient piles, paying at the rate of from \$2 to \$4 per 100 for roses. At 10 this was over and the remainder was lumped off to two buyers at a uniform rate of \$5 per 1000 for roses regardless of variety. Among the "clean up" was a great deal of under quality stock but much of it was as good as the market afforded at the time. At 11 a. m. there was not a flower in the place, and of course it would have been impossible to fill any orders from outside had such been received.

Through this policy the New Yorkers have been drawing more and more within themselves and are obliged to rely almost wholly on home demand, with the result that when demand is light prices drop to ridiculously low figures, though at other times correspondingly high prices are obtained.

KENTIAS FOR DECORATING.

The kentia is undoubtedly one of the toughest of palms and is consequently very valuable for decorating. It can be kept in a parlor in fair condition for a period of three years, something which can be successfully done with few other palms.

The London growers of palms some time since attempted to form a combination, all to agree not to grow any more kentias, owing to the fact that they lasted so long even when placed in somewhat unfavorable situations, that they spoiled the market for the grower. But like all similar attempts at forming combinations it failed.

In this country, however, this objection (?) to this palm would not be insurmountable, as with careless wrapping of the plants when taking out during the winter season frost might take out of the market an occasional wagon-load or so, and thus keep up a healthy demand.

Certainly no better recommendation of the palm could be had than this testimonial as to its ability to hold on to life and look cheerful under trying circumstances. That is just the sort of plant we need to stand the hard usage incidental to decorating.

A lot of palms recently imported by a Philadelphia florist well illustrated the comparative toughness of several kinds. While the kentias and rhaps were in fine condition and apparently unharmed by their long confinement in transit; the seaforthias and ptychospermas were badly injured, showing many brown and withered leaves.

Kentia Belmoreana and K. Forsteriana are almost identical in habit and growth, the only difference being in the dark colored leaf-stems peculiar to the former. K. Australis is much like those above noted but with shorter leaf-stems. All are excellent for house decoration, the main purpose for which palms are used in the trade.

TOO MUCH VARIETY.

"Variety is the spice of life," but many florists growing market and bedding plants have too much of it for their own good.

The most successful growers of market plants, those who reap a plentiful harvest of dollars as a reward for their skill and labor, grow but a limited number of varieties of any one plant. The varieties grown are those which they have found by experience to make the most salable plants for the least outlay, and in most things their selection on this rigid test has narrowed the number of varieties down to a very few.

And if you are to keep your position in the ranks, with the present sharp competition, you must certainly do likewise. You will find that with but a few varieties you can produce better plants at less expense than you can with a great collection of varieties and but few of a kind.

With the object of assisting you in making a selection, we have obtained lists of the varieties grown by large growers of market plants in various cities and invite the sending of similar lists from growers in other cities. For it is certainly a fact that varieties which do well in one locality are not necessarily equally valuable in another. Still the presumption is that what does well in one place is well worthy of trial in another.

PLANT PORTRAITS.

The practice of using an engraving of one plant to illustrate another sort in catalogues has been noted and condemned in these columns. But what words may we use to express our indignation when the same practice is resorted to by the press, which claims to be a teacher of the people.

In the issue of the *Prairie Farmer* for April 6 appears a lot of ancient engravings illustrating an article upon trees and shrubs, and among them is an old cut of *Adiantum gracillimum* (a tender fern), labeled "Cut leaved Sumach." Surely practices of this kind when indulged in by the agricultural press can not but lower it in the estimation of all intelligent readers. What is reprehensi-

ble in catalogue men is doubly so in the press. If agricultural or horticultural papers can not afford to get up original engravings or to secure electrotypes of accurate ones they had better far use none at all.

Another reprehensible practice indulged in by many papers is the publication of engravings of novelties, said engravings being gotten up by the introducer of the novelty for catalogue use and frequently wonderfully exaggerated. The engraving is of course furnished to the paper free of cost and for the sake of saving a few dollars the publisher gives to its readers an illustration which in the majority of cases is misleading.

PAINESVILLE, O.—Mr. J. J. Harrison, of Storrs & Harrison Co., is confined to his house with rheumatism.

SAYRE, PA.—John McQueen has built two houses, one 120 x 24 and one 60 x 24. He will soon build another 120 x 65.

The Seed Trade.

WHEN THAT SEED TRUST is organized what a saving there will be in the matter of catalogues and advertising.

GREAT DAMAGE has been done to cabbage and vine crops by the cut worms; prices of vegetable plants have advanced in consequence.

MESSRS. Emerson, of Omaha, Salzer, of La Crosse, and Leonard and Vaughan, of Chicago, left Chicago on the 8th inst. for the seedsmen's convention via New York.

ROCKFORD, ILL.—Mr. Geo. S. Haskell left for California the past week. There are prospects of forming a stock company among those interested in the Haskell assets. The Rockford seedsmen are not over enthusiastic over the result of the season's business.

The Seedsmen's Convention.

The Seed Trade Association met in annual convention at Washington on the 11th and 12th insts. About 50 members were in attendance. Headquarters were at "The Arlington," where the sessions were held also.

Officers for the ensuing year were elected as follows: President, H. W. Johnson, Philadelphia; Vice-President, J. C. Vaughan, Chicago; Secretary and Treasurer, Albert M. McCullough, Cincinnati; Assistant Secretary, Frank T. Emerson, Omaha; Executive Committee: John Allan, Picton, Ont.; Wm. Meggat, Wethersfield, Conn.; John Fottler, Jr., Boston; S. F. Leonard, Chicago; H. W. Wood, Richmond, Va.

Boston.

Decoration Day, 1889, was an unusual one in Boston. The hot weather which prevailed during April and May not only forced outdoor flowers into bloom much earlier than usual, but it also nearly ruined everything indoors. This was especially true of the roses, which were completely fagged out. This state of affairs made it difficult for anybody, retailer or wholesaler, to figure ahead on either stock or prices, and there were some instances where thoughtless parties made some ludicrous blunders in calculation. In general, people were cautious in making promises, however.

The price of Bon Silenes, which a couple of days before was not over \$1 per hundred, suddenly jumped to four, five and six dollars per hundred, and fancy roses advanced in like ratio. But it was a question of supply rather than price, and had the price been four times higher it would not have made roses where there were none, consequently many a memorial bouquet had to be sent to its destination minus roses. The same story, in the main, would apply to carnations, which advanced from 50 cents per hundred to \$2, \$3 and even \$4 per hundred for choice lots. White stocks were quite abundant and helped to fill in the gap made by the scarcity of carnations. Rhododendrons, deutzia and hardy azaleas were welcome, although unusual additions to the Decoration Day stock. Wild flowers such as smilacina, cornus, lupins, etc., were also freely used, even wild blue iris finding a ready sale. So, if the florists could not boast of the quality of their stock, and although their actual cash receipts may have been smaller than in previous years, yet they had the satisfac-

tion of seeing their stock completely cleaned up and the assurance of clear profits consequent thereon.

The rhododendron show of the Massachusetts Hort. Society was held on June 1st. The principal exhibitors of rhododendrons were H. H. Hunnewell and

THE LONG AND THE SHORT OF IT IN THE MATTER OF CONTRASTS.

Mrs. F. B. Hayes, although there was quite a number of smaller exhibitors. The display of hardy azaleas was fair, of irises exceptionally good, and that of wild flowers very interesting and complete. The attendance was large.

W. J. S.

CONVENTION SUPPLEMENT.—With our issue of August 15 we shall publish our annual convention supplement, giving advertisers a splendid medium through which to reach members just before they start for the Buffalo convention. Extra copies of the same will be distributed at the convention. Rates for ads. same as for those in the body of the paper.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SLUG SHOT.

THREE HUNDRED DOLLAR PRIZE. SOUVENIR DE WOOTTON

THE OFFER:

WASHINGTON, D. C., May 23, 1889.

My Dear Mr. Craig:

I have about concluded to offer a prize of \$300 for the best twelve cut blooms of SOUVENIR DE WOOTTON rose, to be exhibited at the Pennsylvania Horticultural Society's meeting in January or February next (1890), open to all comers except myself. If this meets your approval and you will send me a letter as soon as convenient to that effect, naming three judges to serve on the occasion and designating the exact day on which the meeting will be held, I will make the matter public through the columns of the AMERICAN FLORIST in the next issue.

Very sincerely yours, C. STRAUSS & CO.

To MR. ROBERT CRAIG, Prest. Penn. Hort. Society.

THE ACCEPTANCE.

From the Philadelphia Public Ledger, May 22, 1889.

THE SOUVENIR DE WOOTTON ROSE.

At the meeting of the Pennsylvania Horticultural Society, last night, Mr. Robert Craig announced that Strauss & Co., of Washington, D. C., offer a premium of \$300 for the twelve best blooms exhibited at the fall show of the society, of Strauss & Co.'s rose, "Souvenir de Wootton." The offer was accepted. The "Souvenir de Wootton" is a hybrid of rich color and very fragrant. It was named in honor of the visit of delegates to the American Florists' Convention, held several years ago, to Mr. Geo. W. Childs's summer residence at Wootton, where they were pleasantly entertained. Mr. Craig stated that the offer would undoubtedly stimulate growers all over the country to compete.

NOTICE. THE WOOTTON IS A HYBRID TEA, OF A RICH RED COLOR, AND WE CLAIM THAT IT IS THE FREEST CONTINUOUS WINTER BLOOMING ROSE OF ANY KIND UNDER GLASS FOR CUT FLOWER PURPOSES THAT HAS EVER BEEN ORIGINATED. IN SIZE EQUAL TO AMERICAN BEAUTY, BUT MUCH BETTER IN COLOR.

Orders for the Wootton will be filled during June, July and August, FROM THREE INCH POTS, at \$25 per hundred; \$100 per five hundred; \$180 per thousand. In less quantity than 100, at 50 cents each.

By **C. STRAUSS & CO.** P. O. Box 422 WASHINGTON, D. C.

**"A GREAT HELP
IN CUT FLOWER WORK, AND
HAS BEEN GREATLY NEEDED"**

So say many of FLORAL DESIGNERS, concerning which more can be learned by addressing

J. HORACE McFARLAND, Harrisburg, Pa.

Hail Insurance.

Through the columns of the FLORIST I wish to thank the Hail Association for the prompt settlement of my claim for damage to glass by hail. I received remittance in less than two weeks after I sent in report. There has been no money spent more profitably by me than when I insured my glass in the Hail Association. Independence, Mo. N. S. GRIFFITH.

Machine Made Pots.

The potter whose letter you published recently made a strange slip when he said that the oil used in the manufacture of a machine pot forms a glassy surface like a piece of glazed stonework. Please ask him what becomes of that oil when the pots go through a kiln at a high degree of heat for 24 hours. J. N. P.

Forcing Bulbs for Fall Delivery

If you will make up a list of your wants and send us now, we will book same at importation rates. We are now making up our regular commissions to our growers in France, Germany and Holland, and will take your orders—large or small—at a slight percentage over cost if you will club with us to save freight, etc. REMEMBER, we handle no second grade bulbs. Our experience of many years in importing bulbs, enabling us to procure the very best quality at the lowest prices. If you intend to avail yourself of this opportunity, write us at once, giving varieties and quantities and we will furnish an estimate by return mail. We handle the following varieties in quantity—all splendid forcers:

Lilium Harrisii, first class, 5 to 7-inch.
" " extra, 7 to 9-inch.
" *Candidum*, best North of France grown
" *Longilorum*, Bermuda grown, 5 to 7-in.
Roman Hyacinths, White, extra, 11 to 15 centimetres.
Roman Hyacinths, Pink, extra, 11 to 15 cent.
Paper White Narcissus, extra.
Double Yellow Narcissus, Von Zion.
Trumpet Major Narcissus, true.
Freesia Refracta Alba, first size.
" " extra large.
Tulips, La Reine, white.
" Belle Alliance, scarlet.
" Yellow Prince, yellow.
" Kaiser Kroon, crimson, yellow edge.
" Cottage Maid, pink and white.
" Van Thol, scarlet.
" Double Duke of York, rose and white
" " Princess Alexandra, red and yellow.
" " Imperator Rubrum, scar.
[The three last named are splendid forcing vars.]
Lily of the Valley, best Hamburg pips.
Spiraea Japonica, fine clumps.

FORCING BULBS FOR FALL DELIVERY.

NARCISSUS

and Other Popular Bulbs for Spring Forcing

SPECIAL PRICES UPON APPLICATION.

Narcissus Albicans, large creamy white trumpets; one of the best.

Narcissus Bicolor Empress, the Queen of the bicolors, immense trumpets, a great favorite.

Narcissus Bicolor Grandis, similar in color to Horsfieldi; but with stouter flowers and much later.

Narcissus Bicolor Horsfieldi, a great beauty and fine for cutting.

Narcissus Bulbocodium, "Yellow Hoop Petticoat," fine strong bulbs for forcing.

Narcissus Bulbocodium Citrinus, pale sulphur flowers, and very early.

Narcissus Emperor, the largest; immense stout flowers of a rich yellow.

Narcissus Golden Spur, immense deep golden yellow flowers, and wonderfully early.

Narcissus Henry Irving, rich yellow, large bold trumpets.

Narcissus Incomparabilis Cynosure, a beautiful single incomparabilis for cutting, yellow cup, divisions creamy white.

Narcissus Incomparabilis Stella, large single white variety, very early, fine for cutting.

Narcissus Major, true, one of the best forcing sorts, large yellow trumpets, similar to maximus.

Narcissus Nobilis, a first class variety for florists, free and early.

Narcissus Obvallaris, the true Tenby daffodil, one of the best varieties, forcing deep rich yellow flowers of great substance.

Narcissus Odorus Campenelle, the well known Campenelle Jonquil, very strong bulbs.

Narcissus Orange Phoenix, large double white flowers with orange center, good for cutting.

Narcissus Pallidus Præcox, the earliest of all, forces very freely, single, sulphur colored trumpets.

Narcissus Rugilobus, true, large yellow trumpet, very free and very early.

Narcissus Scoticus, the Scotch Garland daffodil, a beautiful variety both for borders and for forcing.

Narcissus Von Sion, true, the double deep yellow daffodil.

Freesia Refracta Alba, large bulbs for forcing.

Freesia Leichtlini, a nice contrast to preceding and forces well.

Gladiolus The Bride, flower pure white, fine for forcing.

Helleborus or Xmas Roses in great variety, and extra fine flowering clumps for forcing, can be supplied early in fall.

And many other first class sorts. List of varieties and price I should be happy to furnish upon application.

DELIVERIES, JUNE & JULY.

Send for Wholesale prices to

WM. BAYLOR HARTLAND, Seedsman,

24 Patrick St., CORK, IRELAND.

Established in succession 120 years.

Look Out for Him.

Julius J. Jugl, formerly of Brooklyn, N. Y., who has been selling a patent wooden hose mender, has developed into a forger. Two cases have been brought to our attention where he had forged the name of H. E. Chitty, Paterson, N. J., to checks for small amounts, which were cashed by unsuspecting florists and supply dealers. He was last heard from at Albany, N. Y.

The First Mention of Moon Flower.

"And the white Moon Flower, as it shows
On Serendip high crags, to those
Who near the Isle, at evening sail
Scenting her clove trees in the gale."

Thus writes "Tom Moore" in the "Light of the Harem," published in 1817; and let us rather look to him (if not still further back), than to the lager beer garden in Washington for its name.
Americus, Ga. A. W. SMITH.

GLECHOMA HEDERACEA is a plant which will be of great value as a basket and vase plant. It is a creeping vine with distinctly variegated leaves, is a quick grower, can be propagated rapidly and looks well through the season. It gives every indication of becoming a standard plant with all florists who have use for a basket plant.

PANDANUS VEITCHII is an admirable house plant when properly treated. The most frequent cause of failure with it is over watering, and customers should be instructed to be careful in this respect. If the temperature is below 60° the plant should be watered very sparingly; it should never be very freely watered unless growing in a high temperature. This applies also to Pandanus utilis.

CARNATION WM. E. ROWLAND is a new variety which Craig & Bro., Philadelphia, have on trial and which they will send out if it proves to be of value. The flower is in the way of Grace Wilder but of a more decided color. A house of it had a tremendous crop of bloom in May, but it did not bloom well earlier in the season. It will be given another trial under more favorable circumstances for early bloom. Should it prove nearly as free in winter as in spring it will be a grand acquisition. In any event it will be valuable as an Easter pot plant, and for cut flowers from Easter on.

MAKE USE OF YOUR BOOKS. I think the florists as a rule pay too little attention to the printed matter which comes to them in so many ways, the trade journals, society reports, catalogues, illustrations, etc., can be utilized in many ways, not thrown aside, never read and lost. I have a rose book, clippings from many authorities, books, catalogues, etc., alphabetically arranged and indexed like a ledger. Another handy book is the one of floral designs, sent out the past winter; on the backs of the pages I have many excellent ones from the FLORIST, and beneath each I leave space for notes on prices of various sizes. These but suggest others. A book of photographs of flower designs which can be increased by exchange with others in the trade is another excellent aid.—L. S. Goleta, Calif.

MRS. J. S. R. THOMSON, Spartanburg, S. C.

JAS. BACKHOUSE & SON
THE NURSERIES,
YORK, ENGLAND,

invite the attention of the American trade to the following *SPECIAL STOCKS*, for which they have long been famous:

ORCHIDS.

Comprising Cattleyas, Laelias, Odontoglossums, etc., which they offer in established plants by the dozen, hundred or thousand. Disas (the finest stock of flowering plants in Europe), and other popular genera in choice leading kinds together with many rare and unique varieties.

FERNS.

These have long been a specialty, and our stock of Tree Ferns, Filmy Ferns, Gleichenias, Maidenhairs, and other popular kinds, is unsurpassed. Very moderate quotations can be given for grand specimen Tree Ferns; and for other kinds by the dozen, hundred or thousand.

Stove and Greenhouse Plants.

The leading kinds in large quantities. Special stocks of Red and White Lapaerias; specimen Camellias in all sizes, including large plants of Double Whites; Imantophyllums (Clivias), Eucharis, Azalea rosæflora and other fine varieties, Rhododendrons, etc.; together with extra strong plants of stove and greenhouse Climbers.

Alpine and Herbaceous Plants.

For many years we have given special attention to gathering together an extensive collection of the most popular plants of Old English gardens; whilst our collectors and correspondents in the Alps, Pyrenees, Tyrol and other mountainous districts of Europe; as well as in Asia Minor, the Caucasus, Turkestan and Siberia, India, Japan, Australia and New Zealand, have enriched our stock, which for extent and variety is unsurpassed in the Trade. Of Auriculas, Campanulas, Delphiniums, Fritillarias, Narcissi, Phloxes, Primulas, Pyrethrums, Spiræas, Iris, Hellebores, etc., etc. We cultivate the choicest kinds in large quantities.

Evergreen & Flowering Trees & Shrubs

in the best and hardiest varieties are extensively cultivated, including North American, Japanese and other CONIFERAE which our soil and climate admirably suit. Also Hardy Climbers in great variety.

FRUIT TREES

are also largely grown in the best and most productive sorts.

VEGETABLE SEEDS.

Peas, Broccoli, Cabbage, etc., of the newest and best varieties.

Our representative, MR. S. MARSHALL, expects to visit the States, arriving about end of July, and will be happy to wait upon purchasers, or send special quotations on application. Address, GRAND CENTRAL HOTEL, NEW YORK CITY.

Germination of Moon Flower Seed.

Mrs. Thompson, our South Carolina correspondent, calls attention to the fact that the germination of the seed of the Moon Flower may be expedited and made much more certain by cutting off a small portion of the end of the seed and then soaking it over night in warm water before planting.

HOT BED SASH that are not in use are now carefully piled up under cover with thin strips of wood between each one to allow a circulation of air between them, by all sensible florists. Some however who can not be classed under this head still have their sash scattered around the place exposed to the weather, the edges sunk in the mud, leaning against the sides of greenhouses or frames where more or less glass is sure to be broken.

Ives' Putty Machine.

Patented Jan. 8, 1887.

The best device ever invented for laying putty. With this you can make old leaky sash perfectly tight without removing the glass. It will do the work of five men in bedding glass.

Send by Express on receipt of price, \$3.00.

J. H. IVES, DANBURY, CONN.

HUGHES'
SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants: such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

STYRAX JAPONICA. — Mr. Falconer sends us from Glen Cove, N. Y., a few flowering branches of this excellent shrub. The persistence of the flowers is really remarkable, and this desirable quality in conjunction with the beauty of the foliage and flowers makes it of great value. It should be better known and more generally distributed.

THE NURSERYMEN apparently did not wish to take up the subject of fruit nomenclature. It was too much trouble!

Massachusetts Hort. Society's Rose and Strawberry Exhibition at Boston.

The annual Rose and Strawberry Exhibition of this society is one of the most important shows of the year. About \$1,000 is offered in premiums and it is always looked forward to with much interest by the public.

According to the schedule the show was to be held June 25 and 26, but owing to the forward season it was found necessary to put the date one week earlier. Two weeks earlier would have been much better. The strawberries were all right, and the exhibition of this fruit was exceedingly fine, but the roses were in very bad shape.

It was certainly the poorest rose show we have seen here for many years. The weather was the only cause of the failure, however.

The principal prizes for hybrid perpetuals were awarded to J. B. Moore & Son, Mrs. F. B. Hayes, J. L. Gardiner, W. H. Spooner, W. C. Strong and Mrs. E. M. Gill. There was nothing specially new or noticeable in the varieties presented. In the moss and hybrid tea classes there were no entries. Martin Lally, gardener to C. W. Galloupe, made a remarkably fine display of teas and hybrid teas. These were equal in quality to the best winter grown buds and attracted much attention.

The display of orchids was better than usual, the principal exhibitors being John L. Gardner, E. W. Gilmore and Pitcher & Manda. The latter firm staged a very large and beautiful collection including several large specimen plants and some varieties that have never been shown here before. Among their cypripediums were *Javanico superbiens*, *ciliolare*, *barbatum nigrum*, *Euryale*, *Lawrenceanum*, a fine plant of *Veitchii*, one of *caudatum* bearing three flowers on one stem, and *bellatulum*, the latter a beautifully spotted little fellow now shown here for the first time. Other good plants in this collection were *Trichopilia crispata*, *Cymbidium Lowii*, a grand variety of *Oncidium crispum* and *masdevallias* in best colors.

J. L. Gardner's display of orchids was also rich in specimen plants and fine varieties. There was a *Dendrobium Dearii* with unusually fine growths and bunches of flowers, a well bloomed plant of *Oncidium macranthum*, a beautiful specimen of *Dendrochilum filiforme*, *Thunia alba*, *Masdevallia peristeria*, and a number of excellent plants of *Epidendrum vitellinum majus*.

Mr. Gilmore's *Odontoglossum pescatoreis* were remarkably good and reflected great credit on the gardener Mr. Greaves. He had also some fine *O. crispum*s, *Dendrobium Jamesianum* and an unusually good variety of *Cypripedium ciliolare*.

The first premium for foliage plants was awarded to Mr. Gardner's *Gymnogramma schizophyllum gloriosum*.

Mrs. E. M. Gill, Miss S. W. Story and Mrs. A. D. Wood were as usual, the only competitors in bouquets and were awarded 1st, 2nd and 3rd prizes respectively. Next to the roses and orchids the principal interest centered in the Sweet Williams. There were many competitors, all meritorious, but the collections shown by E. Sheppard & Sons and A. H. Fewkes were ahead of any Sweet Williams that have been seen here. The schedule is somewhat cloudy in regard to this flower, the prizes being offered for "trusses," but leaving it open to dispute as to how much or what part of a "spike" constitutes a "truss." This should be corrected another year. The displays of English iris by J. L. Gardner and A. W. Fewkes were very beautiful and attractive.

Sewall Fisher showed two seedling carnations, Mary Fisher, yellow and red, and Mrs. Fisher, white. The latter is a magnificent flower, and was well worthy of the first class certificate of merit which was awarded it.

O. B. Hadwen showed a good collection of *paenias* and there were some striking delphiniums from E. Sheppard & Sons, K. Findlayson and others. The newly renovated halls of the society were opened at this show for the first time to the public. The general effect is pleasing, but it is a pity that the large mirrors which formerly beautified the upper hall and reflected so prettily the bright colors of the flowers were not retained.

W. J. S.

Arboretum Notes.

III.

There are between eighty and ninety varieties of roses in the Arnold Arboretum. These have been collected from all countries and represent every type of natural rose from the diminutive *Rosa multiflora* up to the stately *rugosa*. The flowering time of these wild roses is more extended than one would suppose, many species having bloomed nearly a month ago while others are only beginning to show small buds. Many of them, "single flowered" though they be, are well worthy of a prominent place in the garden, making up in abundance of bloom, hardiness, and freedom from insects, for all they lose in comparison with their showy relatives—the hybrid perpetuals. *Rosa* repens now in flower is a very beautiful species bearing an abundance of pure white blossoms with yellow eye, and stamens tipped with brightest brown. The old French Province rose (*Rosa provincialis*) is now in bloom. No rose ever had a sweeter fragrance and few can equal it. *Rosa stylosa*, var. *leucochroa*, is tall and showy with beautiful clusters of white, sweet-scented flowers. *Rosa gallica* is seen in many varieties, some of them brightest crimson in color. *Rosa arvensis*, var. *Ayreshirea*, is very pretty, semi-double, shaded pink and white.

Spiraea Japonica is just coming into bloom. Several beautiful varieties of this most valuable shrub are now at their best. *S. Japonica* var. *splendens*, is one of the earliest, color bright pink. *Sanguinea* is somewhat paler in color and later. *S. salicifolia*, and *acutifolia* are in full flower, although in an ordinary season they are not expected to bloom till July. *Salicifolia* var. *rosea*, is very graceful in habit.

Andromeda speciosa is now in bloom. This is certainly the grandest of all the *andromedas*. It could be readily forced and would not suffer in comparison with the choicest exotics. The flower bells are pure white, one-half an inch in diameter, resembling a mammoth lily of the valley, very fragrant and borne in great profusion. An illustration of this beautiful flower will appear in the next issue of the *FLORIST*. There is a variety known as *pulverulenta*, differing from the type only in having glaucous foliage.

Among the clematises now in bloom are *integrifolia*, bearing nodding, purple flowers, measuring three inches across when expanded. *Pallisii*, very fragrant white, and *angustifolia* also white and rather smaller than *Pallisii*. *C. fusca violacea*, bearing dull violet colored bells, blooms all through the season. *C. Pitcherii*, pale blue on the outside of the petals, with lemon on the inside and edges, also flowers continuously.

One of the prettiest of the honeysuckles is *Lonicera Chinensis* var. *flexuosa*. The foliage is of a rich dark color and the flower buds before expanding are bright rose.

Among the hardier hydrangeas one of the showiest is *H. vestita*, var. *pubescens*. It is perfectly hardy and bears an abundance of very large trusses of white flowers.

Itea Virginica and *Ligustrum Ibo* are two very desirable shrubs for lawn decoration. They both bear white racemes of flowers in great profusion, and the bunches of fruit on the *ligustrum* in autumn are scarcely less showy than the flowers.

The most effective of all the shrubs now in flower, however, are the Mountain Laurel (*Kalmia latifolia*) and the white azalea from the mountains of North Carolina (*Rhododendron arborescens*). Wide expanses of hillside in the Arbutum grounds have been planted with young laurels, and although small as yet, they already make a beautiful show when in bloom, while their evergreen foliage makes them equally effective in winter. These plants as well as the large number of azaleas have all been raised from seed by Mr. Dawson and they show many variations in habit, and in size and color of bloom.

WM. J. STEWART.

Boston, June 20, 1889.

Long Island Notes.

BY WM. FALCONER.

THE FOUR-LEAVED MILKWEED.—"What's this *asclepias*?" asked a florist the other day as he unrolled a blossom from a paper in his pocket. It is *Asclepias quadrifolia*, I remarked, and the finest species of the whole genus. Now you've got it, a gem of the first water and still only an American wild flower. If you get up a big stock of this plant and give it to the people you will do a public good and what no one has ever done before. Although of modest proportions and far from being as gay as the fiery *A. tuberosa*, its flowers are of a beautiful pale pink color and deliciously fragrant, and it is the earliest blooming of its race. But how it hates captivity!

HELENIUM BOLANDERI is a hardy perennial, indigenous to meadows and swamps near the sea, in Mendocino and Humboldt counties, California. Our plants are a year old from seed and now in bloom, and I am particularly well pleased with it. The flowers—disc and rays—are golden yellow, singly terminating the two foot high leafy stems, the disc is about an inch across and the rays $1\frac{1}{2}$ to 2 inches long, narrow and somewhat deflexed, in fact the flower looks like a wide open Japanese single chrysanthemum. Our best flowers are $5\frac{3}{8}$ inches across. It is distinct from every other flower on the place and very striking, at the same time I do not claim that it is a good cut flower for florists.

ORNITHOGALUM ARABICUM was imported and grown in large quantity by some New York florists two years ago. What the florists grew and treated properly flowered handsomely, but the florists who treated them as if they were common tulips were a little disappointed, and some of the importers who had a few thousands of bulbs left on their hands wished they hadn't gone in so heavily. This rendered all parties a little cautious last year. And some of the florists who were so successful the year before kept over their old bulbs and forced them again, but with rather poor success, and they wished they had bought a fresh stock. One importer had a surplus left over, but he didn't propose to give them away as he did the year before, and as the bulbs seemed plump he kept them over till April and then planted them out. They grew well and towards the end of May came into good bloom and look first rate. He won't throw his surplus away again.

HARDY CARNATIONS are making quite a stir among the florists on Long Island, and the plant merchants are handling them in large numbers. But the flower growers have also got interested and some of them have come to the conclusion that a lot of these hardy carnations kept over winter in cold frames and brought indoors in batches in early spring would give them quite a lift. And why not? for some of the selfs are not only large and of good form, but very fragrant, and after a winter's rest they are sensitive to warmth, force easily and blossom copiously. But a little too tender as open air garden plants. Mr. William Robinson, editor of the *London Garden*, writing to me a few weeks ago says: "It would be almost worth your while to sail the six days to see the place (his own private one) in rose and carnation time. I have 5,000 selfs in the open air on a hilly spot absolutely exposed." This shows how the most eminent horticulturist in Europe appreciates hardy carnations.

AMONG DOUBLE PETUNIAS from seed this year about 10 per cent have come double and 1 per cent splendid. *Petunia grandiflora fimbriata* fl. pl. is the strain and I have not found any that is better.

IS THAT *Nertera depressa*? asked a florist the other day as he caught a glance of some plants of *Pratia angulata* (*Lobelia littoralis*) in pots. No wonder the question, for at the first glance there is considerable similarity between the two, but as the *pratia* ages the likeness lessens.

DON'T THE LEAVES of *Kalanchoe carnea* very much resemble those of *Bryophyllum calycinum*? asked the same florist as he looked upon the foliage of the Cape stranger. And so they do.

THE DOUBLE-FLOWERING *Geums* are

pretty garden plants, but of little use for cut flowers.

THE JAPANESE *STUARTIA* is blooming freely with us. It is a beautiful shrub, but although the large white blossoms are pretty enough, they are too fugacious to be of any service when cut.

THE AMERICAN *Stuartia* (*S. pentagyna*) is also coming into bloom. It doesn't make as pretty a shrub as the Japanese, but its flowers are larger and stick to the branches for a few days, and in this way when cut in good sized sprays they are quite effective in decorations.

KÄMPFER'S IRISES.—How grand they are! They are earlier this year than they are usually. And on account of the very moist weather so far these irises have made an unusually fine growth and promise a splendid display. Don't stick to the idea that these irises are aquatic; the finest plantations of them around New York are growing in the open field as if they were corn or any other crop.

LOOK AROUND and see the Kämpfer's irises and if you like them and conclude that they would be an advantage to your business get a stock. They are easily raised from division and seed and easier to grow than common German irises for they come up in tufts like a Siberian iris and have no surface root stocks to rot off with wet or covering.

DO YOU KEEP BEES?—No. Why not? Can't be bothered. How's your seed crop? Middling only. Now, take an old fellow's advice. If you want a good seed crop or a good fruit crop keep bees. I know it, they destroy the heliotropes in the bright days of early spring, still the advantages we derive from them exceed the interests we sacrifice to them.

PHILADELPHUS CORONARIUS NANUS is a shrub that I have grown for many years, have large old plants of and know of many old plants elsewhere, but till this spring I never had seen it in bloom. One of our old plants bore a few flowers.

THE GOLDEN-LEAVED dwarf *Philadelphus* also bloomed with us this year.

CRATÆGUS LELANDII also bloomed nicely. But its chief attraction is its profusion of red fruit later on.

ANTHEMIS TINCTORIA is an old-fashioned European hardy perennial which in June bears an immense crop of golden daisies. It is very effective. And after this rush of bloom is past it will blossom a little all summer. Of the easiest possible propagation by division and seed, and wherever a branch touches the ground it roots and grows. There are white and pale yellow forms, but the bright yellow is by far the best.

SPIRÆA PALMATA is a hardy herbaceous perennial now in fine bloom, and which florists should become well acquainted with. Its flowers are bright crimson red and disposed densely in cymose panicles that stand up well above the leaves. It comes in after *Astilbe* (commonly called *spiræa*) *Japonica* and the double flowering *S. filipendula*, and at the same season as *S. Ulmaria* fl. pl. and *S. lobata*. It is quite hardy, at the same time well fitted for cultivation in pots; indeed, it is largely grown for forcing in England. But for forcing the plants should be strong, well established in their pots the previous year and ripened off early and rested.

MR. RATHBORN'S STORK-BILL.—"It is the pelargonium or stork-bill," a "regal plant" whose "shades would defy the brush of genius to reproduce," and "designs of which nature has the secret and

PLATE NO 1 CORSAGE BOUQUET. [See page 513.]

ONE WAY TO DO IT.

In engraving the picture was reversed. The bouquet should curve in the opposite direction.

the copyright are marked on every bud and flower. I got a slip in England a year ago for \$15. * * Except one in Washington there is not another flower in America like this." Mr. Novelty, please secure this little treasure.

A VERY RARE lily would be a cross between an iris and a liliun, but such a case was reported to me the other day. I shook my head.

PERENNIAL LARKSPURS are at their best. In Europe there are many named varieties; in this country we stick mostly to seedlings. From a real good strain as Lemoine's we should get a very fine race of flowers; but even in the best of strains we will find a good many not fine enough to keep.

IMPATIENS GLANDULIFERA is an annual freely catalogued in large seed lists. It is all right in its way, a free bloomer and rank grower, still it has a weedy appearance and is of no use to the florist.

LAVATERA ARBOREA FOL. VARIEGATA has its friends and its foes, but I'm a friend. It is of very strong growth and shows but little variegation while it is under two months old, the first leaves are most always rather plain green. But as the summer heat increases and its body growth advances the new leaves appear quite liberally splashed and marbled with whitish yellow. For a bold effect it is an excellent subject.

NASTURTIUMS in summer are nice things to have. I grow the Lobbianum

varieties because I want the flowers; if my object was seeds for pickles then I'd grow the common annual majus. I plant them out and let them spread as a flat mat over the ground. For late crop and greenhouse use strike some cuttings, they are rapid growers and soon become blooming plants.

FOXGLOVES.—There is nothing better in this line than *Digitalis purpurea* and its varieties. I like the pure white and the *gloxiniiflora* or white with spotted throat varieties; the purples should be selected so as to get a pretty rose, deep purple; large flowers and closely flowered spikes, short rather than long should be chosen. Here again the evil of depending upon self-sown seedlings, because they come up so abundantly, is likely to triumph; but if you will have quality be particular in saving seeds from the finest flowers, and raising seedlings in this way. It is more troublesome, but it pays. They make a capital display from late May all through June, and are best when treated as biennials.

WHITE PHLOXES.—I have now (middle of June) lots of a very nice white phlox of the *suffruticosa* section in bloom. About two feet high with fine long panicle heads and white, or rose-tinted white, fragrant flowers. This phlox was a seedling raised by John Thorpe some years ago. Florists should grow a lot of it. It is as hardy as a rock, healthy, free and copious, and a short row of it will yield a large lot of flowers. Flowers at this time of year perhaps have no great value, but it is handy to have them and it costs very little to raise them. Once you have got the plants and set them out about all the labor needed with them is to keep the ground about them clean, cut the flowers in summer and sell them; and what flowers you don't cut let go to seed, and save and sell the seed; and when the plants become too large lift, divide and replant what you wish and sell the balance.

POPPIES are in bloom. Orientals are past. On account of so much wet weather recently Alpine poppies have rotted off badly. Annual poppies sown last fall are in full bloom and fast failing; those sown this spring are just beginning to come in. The young poppies that were transplanted from pots come in a little earlier than those sown in the open ground, but they are not so thrifty or long lasting. The Shirley poppies are beautiful and display much variety in color, from the purest white to the most glowing crimson, with many intermediate shades of pink, rose and red, and shaded and margined; also with white, gray or black base blotches on the petals. The new *Papaver lævigatum* has intensely brilliant crimson scarlet flowers and is a free grower and bloomer, at the same time although it may be a species, horticulturally it is of no more value than a variety for I have as intense colors among *P. Rheas* and *umbrosum*; indeed, poppies get so much mixed up when long cultivated as to lose their typical markings to take up a little of the markings of all other allied forms.

SPACIOUS DWELLINGS of Carolina florists.—"A two-roomed cottage," the sumptuous residence of "a successful grower of open air roses and other plants!" Poor sinner of a grower. Come now. A successful grower of roses, even if he be a hired man, is a human being and not a pig, then where or how under heaven is he to lodge his family in decency if restricted to a two-roomed cottage?

OF THE DEVIL'S TREE (*Arbor Diaboli*)

a specimen was discovered last winter by J. H. Betterman, an American scientist, on an outlying spur of the Sierra Madre Mountains. He claims that this is the third tree of the kind ever found, and the only one in the New World; of the other two, one was discovered on a peak of the Himalayas, and the other in the Island of Sumatra. The Mexican plant was only "twenty feet high but covering a large area." Its branches were slimy and twined and twisted like snakes and covered with tentacle-like suckers. On the evening of its discovery it ate a large bird and the skin of the botanist's hand for supper, and next morning it devoured six chickens for breakfast. Illustrated and described in the St. Louis *Globe-Democrat*. This wonderful tree may be seen through the mists of Chihuahua pulque.

CANTERBURY BELLS—Again let me draw your attention to the magnificence of these old-fashioned flowers. They have got beyond the sameness, coarseness and commonness of former days, and in them we now have some of the loveliest and most desirable summer flowers in cultivation. They are in perfection from the 25th of May till the 10th of June, a good deal depending upon season and treatment. As cut flowers they are superb, they last well and look well and seem different from most every other flower we grow, besides, there is nothing stinted about them, they have a full and generous appearance. And now is the time to sow them for next year. If sown in spring they grow too big to winter over safely and in little space, that is, unless plants for forcing are needed, in which case early sowing is advisable. As regards varieties, get pure white and rose as singles, and the same as doubles, but the doubles are not always as pretty as the singles; and by all means get the cup-and-saucer or calycanthema forms. Of these pure white, Rose and Mauve Beauty are as good as any; indeed, the finest I think. Of course the prevailing colors among old time Canterbury bells were blue, violet and purple, but these are just the colors that yield the most washy tints and for which florists care least; in Mauve Beauty you will have all the blue you want. Of course Canterbury bells with a little mulching may live over winter all right, but the great secret in their cultivation is to winter them in a cold frame. Sow now, prick off and transplant as needed till October when transplant into a cold frame; exclude more than 10° of frost in winter and plant out next April. This is about all there is to their cultivation.

SWEET WILLIAMS are in their heyday in June and as they are so easily grown it is well to have a lot of them. They are most satisfactory when treated as biennials. I have been trying to get up an extra fine strain and am working on Bragg's finest strain. Still I have not been very successful, and it is rather tantalizing when I find in some of the common village gardens better Sweet Williams than I have got. But such is the case. It takes careful and long continued selection and isolation to get up a good stock of this or anything. Good white, deep crimson, clean decided markings, large flowers and large heads are what we are working for. A common source of poorness in Sweet Williams is perpetuating our stock from self-sown seedlings, these come up in legion around the old plants and it seems a pity to throw them away, but if we wish to secure the very finest stock we had better save our seed and in this way raise seedlings.

Hybrid Remontants at Christmas, how do you get them? is a question that I am often asked; and for the benefit of those and others who may be interested in the same subject I will give in detail the treatment which I have practiced for the past twenty years or more.

First I will give the treatment for pot grown plants as the most suitable for those who have only room to grow a limited number, or who may want only a small quantity of blooms at any one time.

Start by having good plants in pots now, and where they have been neglected in potting into a size large enough to bloom them in, lose no time now in putting them into the proper size, as every day that is delayed now lessens the chance of getting them to bloom early. For a young plant struck this spring, as a rule an 8 inch pot is large enough unless the plant has made extra strong growth, then it may be desirable to put it into a 9 inch pot. Before doing so let the pots be well drained with not less than two inches of broken pots, coarse at bottom with some finer pieces on top, over the whole place a piece of very thin sod to keep the soil from washing down into the crocking and filling it up; this is a very important part of the operation, as success depends entirely upon the condition of the soil during the time the plants are being forced into flower, for they require liberal waterings and the means for all surplus water to drain away freely. Next take a good quality of loam—old sod is much the best, if heavy add a liberal proportion of sand—and to every seven or eight loads of soil add one of well decomposed cow manure, broken up fine; thoroughly mix and if the soil is naturally very poor a little pure ground bone may be added at the same time. Then repot the plants into suitable sized pots, pressing the soil quite firm around the ball, but do not break the young roots.

When this is done the plants should be placed (at this season of the year) in the open air on a bed of coal ashes and plunged nearly to the rims either in coal ashes, sand or similar material. Water carefully and syringe frequently for the first week to prevent them flagging in the hot sun. As soon as the roots begin to get well hold of the new soil they will push out soft new growth, this must be watched carefully, as at this late date it would be fatal to success if the eyes at the base of the strong shoots should start into growth, and to avoid this it will be necessary to watch the watering very carefully so that they are not overwatered; the object being to get new roots without producing very much soft young wood; so long as the new growth is confined to the tops of the shoots already made no harm can come.

Let them continue in this way till about the middle of August, then commence to withhold the water from them, gradually of course at first, and continue to lessen the quantity every day till the wood becomes quite hard; but try to retain some leaves on them to keep the sap balanced

between root and branch. By the middle of September they ought to stand for a week at a time without any moisture at all other than the dews at night. Should wet weather occur during this period means must be provided to prevent it getting to the roots—laying the pots on their sides with pieces of boards laid over the pots is as good a means as any—for dry they must be kept or there will be no roses when wanted.

If they have been properly treated by the 1st of October the wood will be hard and solid without its being shrivelled, with the leaves turning a pale green. In this condition they are fit to prune; in doing so cut back to a good prominent eye on each shoot, clean off nicely, stand them in a cool frame if to be had, water moderately and syringe three or four times a day; shut up the frame on cool nights or during cold rains and in ten to fifteen days the eyes will have broken nicely. They should be then removed to a greenhouse where the temperature can be kept at 46° to 48° at night with plenty of air during fine days, and watered, syringed, etc. as required. About every ten to twelve days the temperature should be increased two or three degrees at night with less proportion of air during the day according to the weather. As soon as the buds are set they will be greatly benefitted by having a good watering of liquid manure twice a week, but they should never be saturated or given more water till the soil in the pot is in a healthy condition for the roots to absorb the water given. Plants treated this way will be in bloom in ten to twelve weeks from the time they are pruned.

The varieties most suitable for this purpose are: Gen. Jacqueminot, Magna Charta, Anna de Diesbach and Mrs. John Laing, though the latter is hardly as good for earliest pot work as the other three. For blooming in February or even end of January there are a great many good varieties, but for most people the following are perhaps—including those named above and Mme. Gabriel Luizet, one of the finest roses ever raised—the best: Ulrich Brunner, another grand rose, and the new variety Gloire de Margottin, one of the brightest colored roses known; Baroness Rothschild, Mabel Morrison and La Roserie. This gives all the most desirable shades of color and all are good roses.

For later blooming the varieties that can be had in perfection are almost legion; with of course less trouble as the plants can be allowed to grow on naturally till frost stops their growth, and then by placing them in a cool house or like place they can be pruned and brought into the greenhouse as required. One very important item in their cultivation during the time they are in the open air is that they should never be saturated with water for any length of time or the result will be fatal, as black spot will soon have supreme control.

Summit, N. J., June 10, 1889.

Some New Roses.

Mr. Benjamin Cant obligingly sends fine blooms of Ernest Metz, the new tea-scented rose that Guillot has sent out this season and which promises to be a valuable addition and likely to maintain its raiser's great reputation. The flowers are of good size and substance, well formed, with a high center and fine petal and the color is a very pleasing bright flesh-rose tint that does not quickly fade or become dull when the flowers are cut. The plant is likely to be especially valu-

PLATE NO. 2 CORSAGE BOUQUET

ANOTHER WAY TO DO IT.

able in the garden, as the blooms, although solitary, are carried erect upon stiff stems, and therefore displayed to the best advantage.

There is no question about the climbing character of the new sport Climbing Niphetos. Of a couple of spring grafted plants just received from the raisers, Messrs. Keynes, Williams & Co., of Salisbury, one has a shoot seven feet long, and "is still growing;" and the other carries an even greater total length of growth, for though the main shoot has been accidentally stopped at a height of 4½ feet, four or five lateral branches have started and are already each from 1 foot to 1½ feet in length. The only difficulty will be to find situations that afford the plant sufficient room to develop to the best advantage.

Plants in pots of the new Polyantha rose, *Minutifolia alba*, received from Mr. Henry Bennett, the raiser, are most charming. The habit of the variety is very dwarf and compact, and the snowy white flowers are produced in the utmost profusion. Most of these miniature Polyantha roses make admirable pot plants, but none are more distinct and effective

than *Minutifolia alba* from its close bushy habit and the exactness of its pure white flowers, which, unlike those of most other varieties of the section, are delightfully fragrant.

Blauche Rebatel (Bernaix), and the new variety of the same class with crimson flowers, is the deepest colored Polyantha rose yet sent out, and, judging from a well bloomed plant received from Messrs. William Paul, is a very promising addition. From Waltham Cross comes also a plant in flower of *The Queen*, the new white sport from *Souvenir d'un Ami*. Of the flower's whiteness there is no question, and as thus bloomed under glass it might easily be mistaken at the first glance for *Niphetos*.

Mme. Georges Bruant (Bruant), the new hybrid *rugosa* raised from a cross between *Rosa rugosa* and the Bourbon *Tea Sombreuil*, is now flowering freely. The buds are fuller and better formed than those of last year, though still somewhat rough looking; but from their pure whiteness they are decidedly effective on the plant, which is exceedingly vigorous and free, and their fragrance is simply delicious.

White Perle, described as a sport from *Perle des Jardins*, was exhibited at the Temple show of the Royal Horticultural Society, and though there was hardly enough of it to form a very definite opinion, yet the novelty produced a favorable impression, and appears likely to prove an acquisition. The flowers, which are full and well formed, are of a very pleasing pale lemon yellow shade.—T. W. G., in *London Garden*.

Niphetos in Dark Weather.

We have a letter from one who claims to grow *Niphetos* in large quantities, saying that the outside petals always turn pinkish in dark weather, and only in perfectly clear weather the blooms are pure white. We would like to know if that is correct. We have always considered it a pure white rose in all kinds of weather. Please answer through the *FLORIST*.

Upper Sandusky, O. S. O. STREBY.

[*Niphetos* does sometimes acquire a pinkish tinge on its outer petals during long continued dark weather in winter.—Ed.]

MME. LAMBARD.—Regarding this rose I tried it for forcing two seasons and found that it bloomed freely in early spring when there were loads of other roses in the market and when it would sell for a good *Bou Silene*, but found it of no value as a winter bloomer. The flowers do not keep well and are consequently poor shippers. J. F. KLIMMER.

Oak Park, Ill.

Floral Arrangement.

BY H. H. BATTLES.

I.

CORSAGE BOUQUETS.

When flowers are to be worn it is generally to the florist's advantage to suggest to his customer that they be sent loose in a box, as most ladies prefer to select not only the number but the colors they wish to wear with certain costumes. It is most natural that after spending so much time and money in selecting a dress they should be very critical about the finishing touches.

No matter how much judgment a florist may have it is hardly possible for him to determine what flowers should be worn, not knowing the color or cut of the dress. If your advice is asked it is most important that you know the color of the dress. Then your knowledge of harmony of color comes into play.

The ladies will often pardon you for a poorly arranged basket or design of flowers; but a corsage bouquet in which the flowers are poorly chosen, roses stripped of their foliage, stems cut off, wires substituted and tin foil added, they are not so apt to overlook, and in many cases are careful that the same florist does not get the second order. When they have this experience a number of times they condemn the whole trade and we hear it remarked that "flowers are not to be worn this winter," or "I do not wear flowers," etc. For these remarks the florists are generally to blame.

A gentleman goes into a florist's store to order a corsage bouquet; the florist anxious to make a good sale suggests eighteen "Jacqs" and twenty-four "Valley," or something equally absurd; the gentleman wanting to do the proper thing leaves the order and the florist congratulates himself on having made a good sale. In the evening when the

gentleman calls he is surprised that the lady does not wear the flowers, possibly not knowing that the color or cut of the dress will not permit. In this way a great many sales are lost and for these reasons it is generally better to advise loose flowers, giving the recipient an opportunity to select those that she wishes to wear, and the others will give her pleasure for a number of days.

When necessary to arrange the flowers it should be remembered that the most natural and careless arrangements give the greatest pleasure. Often ladies of refined taste prefer to gather up several roses, leaving all of the foliage on their stems, and pin them on carelessly.

For certain dresses long corsage bouquets are most graceful, as shown in engraving No. 1. The stems should be wired, not only that the bouquet can be shaped, but that the buds may not break off. The stems should be worn on the left shoulder, the buds hanging down and curving toward the center of the body.

In this as in all arrangements of flowers small buds and young foliage add to the grace; in corsage bouquets they can be used to advantage in concealing the wire or string with which the bouquet is fastened. The roses used in this case are Papa Contiers.

The stems are cut different lengths, which should always be done, to give the bunch a natural careless appearance. The bouquet is so made that the lady can shape it into a perfect crescent if desired. You will notice that the size of the buds is considered, starting with very small ones and gradually increasing in size, and again diminishing, giving what we consider a graceful effect.

Corsage bouquet No. 2 is more often used. It consists of five Meteors and four Brides. This combination was used thinking to give clearness to the cut. In this case the young foliage and small buds add very much to the effect, the string is concealed and the stems cut at different lengths with several thorns on which add to the beauty, but it is generally better to remove them as they are apt to tear the dress.

The corsage bouquet shown in engraving No. 3 is a good example of how not to do it; we have all seen just such arrangements. We have used in this bouquet practically the same flowers as in number two—four Meteors and four Brides. The builder in constructing this style of bouquet carefully strips all the foliage off the stems, grasps the bud firmly in his left hand, giving it no possible chance to escape, and with his right hand stabs it, often through the petals, with a piece of No. 21 wire. I have seen him cut up one-half string of smilax, wire it and use it as a background; after arranging the flowers as compactly as possible cut the stems or wires off at an even length, wrap a big wad of tin foil around the handle and call it finished.

Parks.

The following statistics taken from a daily paper are of interest:

New York city has an acre of park for every 1,350 inhabitants; Brooklyn, 1,254; Philadelphia, 333; Boston, 130; Baltimore, 521; Chicago, 243; St. Louis, 188; Cincinnati, 812; Detroit, 286, and Washington, 203. Paris, with a population of 2,250,000, has an area of 172,000 acres of park, giving an acre to every thirteen inhabitants; London has one acre for every 205; Vienna, 100; Berlin, 235; Dublin, 183; Brussels, 350; Amsterdam, 437, and Tokio, 167.

The Lady-bird as an Insect Destroyer.

COLUMBUS, GA., June 12, 1889.

DEAR SIR:—Your kind favor at hand and also box with bugs and larvae of the lady-bird. The latter act like a charm; it is really surprising how quickly one of the small larvae can clear a plant almost covered with the small black aphids. I had noticed a few lady bugs on the plants, but thought they too were injurious and had been destroying them. I think on about 200 choice plants I will not have a black bug in a week. Please accept many thanks for your remedy. Very truly yours, R. W. SLADE.

I herewith send you a communication which I hope will be of some service to your readers. Mr. Slade wrote asking me how to rid his "mums" of the black aphids and I sent him a few lady birds and their larvae.

It seems strange that so few know what a friend the lady-bird and its larvae is to florists. It is not only the black aphids that they destroy, but thrip, greenfly and the eggs of many other insects injurious to plants. It is amusing to see the larvae clean out a colony of aphids. They pitch right in and seize each individual as a terrier does a rat, and it takes only a few minutes for them to kill hundreds for there is no escape.

The first lady-birds appeared here this year about June 2, about thirteen days earlier than last year. I have in previous years sent lady-birds to many growers to do police duty among their chrysanthemums. JOHN THORPE.

Pearl River, N. Y.

Seasonable Notes.

No matter for what purpose chrysanthemums are cultivated, this is perhaps the busiest time among growers during the whole year. What with potting, tying, watering and moving the plants from place to place, a chrysanthemum grower's time is thoroughly occupied. As is well known, this busy season comes when other matters press very heavily in the garden, as there is the bedding to be done, grape thinning, and many other duties to attend to, that I am afraid the non-success of many collections of plants can date from about this period. The plants do not get potted early enough, are not staked soon enough, or perhaps are allowed to become dry at the roots too often. Dryness at the root is the most likely cause of the frequent loss of the lower leaves, and not only disfigures the appearance of the plants, but also checks the free growth so desirable to ensure the best results. Pot on the plants as fast as needed. At least twice daily the plants should be examined thoroughly, soaking the soil of any that are found to be dry. Clean tepid water is the best. Syringe the foliage in the afternoon of fine days. Attend strictly to the removal of surplus side shoots, which are often allowed to grow much too long before they are cut off. It only wastes the energy of the plants to allow them to sustain a number of useless side shoots; besides they are so much more easily removed if taken in time, being easily pinched off; thus the whole vigor of the plant is concentrated in the three selected growths. The growths are

now soft, and as they gather strength are extra sappy and more liable to snap off if not securely fastened to the supports, one stake in each pot being sufficient to tie the three shoots to. Green-fly is rather troublesome to the points of the shoots, and if allowed to get a hold the leaves are sure to be crippled and disfigured. The most certain and safe way to get rid of green and black-fly which sometimes affect the plants is by dusting the parts with tobacco powder in the evening, and in the morning vigorously syringing the shoots. Plants for covering walls are now growing vigorously, and need frequent attention to keep the growths securely fastened to the wall, and at such a distance apart from each other that they will not become crowded and consequently weakly.—E. M., in London Garden.

Genistas for Easter.

As an Easter pot plant the genista is very popular and where Easter plants are grown this favorite should not be omitted.

To secure plants in bloom at Easter Mr. W. K. Harris of Philadelphia proceeds as follows: Plants should be propagated in December and grown on for 18 months. The rooted cuttings should be potted off into thumb-pots and shifted into 2½-inch as soon as pot filled with roots. If the plants are given proper care they will be in 4-inch pots by May. They should be grown rather cool—temperature 50° to 55° at night. Genistas should be watered sparingly at all times.

In May plunge the plants in the pots in the open ground covering the pot entirely over with the soil. About all the care they need in summer is an occasional pinching to keep the plants shapely, though some growers do not pinch them, allowing them to grow naturally. Just before frost in the fall lift and shift into a 5 or 6 inch pot according to the size of the plant, thoroughly watering when potted to settle the soil. Then place in a cold house, keeping as cold as possible without freezing. They can be got into bloom at any time after February 1 by placing in a temperature of 55° to 60° about three weeks before wanted.

Well grown plants sold at wholesale in Philadelphia last Easter, in 6-inch pots at \$6 a dozen and in 5-inch pots at \$3 to \$4 a dozen.

Lilium Hansonii.

Lilium Hansonii is one of the finest acquisitions in the way of lilies that has ever been introduced from Asia. We have it in splendid bloom now (middle of June), not one plant, but scores of them, and all growing out of doors in openings among the shrubs. It is perfectly hardy, and without any exception the most healthy and vigorous lily that we grow; in fact its luxuriance is surprising. Near by it auratum have died out by the hundred, the disease has struck superbum, Kramerii and longiflorum have disappeared, even testaceum has succumbed, but Hansonii becomes bolder and stronger every year, and multiplies largely.

It grows some three to five feet high, has wide apart whorls of leaves and terminal racemed heads containing seven to fifteen golden or orange-yellow nodding, reflexed flowers sprinkled with small brown spots; the blossoms are not large, but the petals are very thick. The buds before open are roundish and chubby. It is the earliest of all lilies to start to grow in spring.

PLATE NO 3. CORSAGE BOUQUET

HOW NOT TO DO IT.

[See page 513.]

Elwes tells us that it is indigenous to Siberia, Japan and Eastern Mauschuria. Hogg says it is a native of the northern part of the Japanese Archipelago. We would therefore expect it to be perfectly hardy. Elwes says it grows at once from seed. Of this I can say nothing for I have never seen the seed of it, and although I have grown it for thirteen consecutive years our plants have never attempted to bear seed and repudiated my assistance in fertilizing their flowers.

It bears transplanting with the greatest ease. And while like most other lilies it enjoys a mulching on the ground, we should be careful that the mulching is very thin in winter, as its thick fleshy stems appear before the frosty weather has passed, and if they get bleached at the beginning they become permanently weakened.

In time of blooming *Lilium tenuifolium*, *Davuricum*, *pulchellum*, *parvum*, *Martagon*, *Szovitsianum*, *croceum*, *umbellatum* and a few good forms of *elegans* come in ahead of *Hansonii*, and some of them last through the season of its blooming. Also along with it we

have *Washingtonianum*, *rubescens*, *e. atrosanguineum*, *incomparabile*, *parviflorum*, *Parryi*, *Grayi*, *Columbianum* and some others.

It forces without any trouble and opens all of its flowers in perfection. But its very high price completely removes it from our list of available plants for forcing for cut flowers. Even now it is quoted at a dollar a bulb retail.

Leaves of Advice From a Limb of the Law.

(For Young Florists.)

VI.

Gently, gently! Why, positively, if I didn't know you to be a member of the church I should say you were using profane language. Don't ruin that gravel walk, come to a halt.

Boiling over are you? Well, there's always a chance for the pot when it boils over. What, really! The old villain! Excuse me, I shouldn't speak ill of my neighbors.

Last spring you say you sold old Dr.

Rackem a lot of flowering shrubs for his lawn, bill amounted to \$10 and now old Rackem puts in a counterclaim.

Never consulted him? Take care now, think it over. Ah, met him in the street, did you, the day poor Pat McGinnis was hurt by a blast, and told him to hurry down and take a look at Pat. Now Rackem says he has a counterclaim to your demand. Ha! ha! ha! Excuse my mirth, but that sly old rascal—excuse me—one's neighbor you know.

Take care, take care! Let me talk to you a few moments about counterclaims. Beware of the man who always has a counterclaim. A counterclaim is what the law calls a "set off," that is, it admits the justice of your claim, but demands that the amount of the counterclaim shall be "set off" against it. Rackem's bill is five dollars, so that only leaves him five dollars to pay.

Yes, yes, I hear you, my hearing is excellent, you say you never hired him, that you only gave him information of the accident. Admit it; but Denkhard, the Dutch justice, is one of his patients, and my advice is, accept the five dollars in all humility. You have learned a valuable lesson.

There are different kinds of counterclaims. Some arise out of the same transaction, some do not. I'll give you an example of the former:

You build a new greenhouse and employ a man to do the glazing. He fails to complete the job on the day specified and it so happens that a lot of plants which you had, in dread of cooler weather hurried into the house were touched by the frost. In this case you would have a counterclaim, which the law calls "a recoupment," that is a claim for damages to set off his bill for services and materials. It might be a good one. Or it might fail, provided he could show that your men by hurrying the plants into the new house interfered with the work and caused the delay.

You see how necessary it is to look at a transaction on all sides before you make up your mind.

Of course, the law does not allow a man like Rackem or any other man to come into court with a counterclaim illegal on the face of it, merely to hamper and delay justice. For instance, you are a tenant of mine and are a quarter in arrears on your rent account, I ask the law to put me in possession of my house. It would never do in the world to allow you to make answer that I hadn't kept my word in regard to papering the dining room or parlor. When I bring suit for the amount of rent due me, then it will be time enough to allow you to set up such a counterclaim as that.

Or suppose, I hold your note of hand for \$100 and when it falls due I begin suit, the law would not permit you to come into court and say that you had a claim against me for committing a trespass on your land. That would be a "tort" or a wrong, and the law doesn't allow a man to set up a wrong against a plain money demand.

The action for the injury claimed by you must stand by itself, but in case I too, have a claim for a wrong or personal injury done me then I may set up my claim against yours, that is contract against contract and tort against tort.

Now, as you probably know, it is not at all necessary that you should have been the original owner of a counterclaim. You may have bought it. It may have been given to you. Therefore, if you want to get even with old Dr. Rackem for his meanness, look around

for some good and valid claim against him arising out of contract, and buy it. Under ordinary circumstances I wouldn't advise you to resort to such a measure, but this case I think justifies it.

Note well, that the law requires that a man should become the owner of such a counterclaim before the matter gets into court. You must be able to swear that you were "at and before the commencement of the action the good and valid owner of the claim etc." Yes, I know it, but never strain your conscience in that way by looking about for a counterclaim after a man has sued you.

Nor will the law allow you to mix actions, so to speak. For example, should any man acting as executor, receiver, etc. bring an action against you for any cause whatever you would not be permitted to set up a demand against the executor or receiver personally.

Ah, yes. I had intended to touch on that point. Naturally, when a man buys a claim he must expect to meet all lawful charges which may be made against it.

Suppose you bought a claim against Rackem and it should turn out that he had a good and valid claim against the man who sold it to you, you would be caught napping. It would be no counterclaim at all.

And coming back to Dr. Rackem I would suggest that as he makes it a custom to call upon everyone in town at least once a year, you would find it pretty hard to discover a claim against which he would have no counterclaim. Never lend yourself to the practice of "cooking up" counterclaims.

A good business name is worth far more than any satisfaction which revenge may bring to you; and no matter how galling it may be to pay an unjust demand it often becomes advisable to do so.

UNCLE BLACKSTONE.

Greenhouse Construction.

BY JOHN N. MAY.

IV.

[Continued from page 525.]

Having completed the superstructure the next thing in order is painting and glazing. I have for several years given all the wood-work of my greenhouses a coat of crude petroleum allowing it to dry into the wood thoroughly, and find it a great protection against rotting. Where it can be done it is best to oil the plates, bars, sash, etc. in the dry before commencing to build; this allows it to get well dried in and also preserves the wood from the sun during building. If it can be done so I would advise it in every case, and then as soon as the iron columns are properly placed to support the roof give the whole a good coat of paint, using the best material to be had; I prefer to put a little Prince's metallic in the priming coat, just enough to make the paint a light pinkish shade, this will form a good body.

When this is done and dry commence glazing, using good quality double thick glass; I very much prefer the French glass. And if the object is to make a durable roof add about fifteen pounds of white lead to one hundred pounds of putty, mix well together, put enough on to bed the glass solid, fasten the glass with whatever kind of point, brad, double pointed carpet tack or other fastening may be preferred, giving each light of glass about one-fourth of an inch lap over the other; always bed the glass with the hollow downwards, this draws the water to the center and saves the drip

considerably. Clean all surplus putty off neatly and when all the glass is in give the whole roof inside and out a good coat of white paint, this leaves everything ready for the plants.

In building the benches—see Fig. 8—I prefer to set the posts in the ground enough to keep everything in shape. For the center I use posts four or five inches through, saw cut the tops deep enough to carry bearers and side board same as shown for front bench (the engraver has made a slight mistake in the front post of center). This done set the end ones the right height and position, then stretch a line from end to end and set each post by it—in doing so I place them at same distance as for main building, this allows for either 12 or 16

have 26 inches between the posts, let the notch in post to receive bearer be level with top edge of string piece on post. Next cut off the bearers—2x4 hemlock—the desired length, nail tight into post and tack to string piece; this keeps them in proper position. For the edge next to the front of house nail the edge board and first bottom board together—4-inch piece for the edge and 6-inch piece for the bottom, keep the edge board one inch clear of the width of gutter or plate—this prevents any drip from the same falling on the bench, for the balance of the bench keep the strips one inch apart the same as for center; this is important as it allows free drainage for water. For the back bench, after the back walk is laid—with a string piece on the back

Fig. 15.

foot lumber to be used. For bearers I use 2x6 or 2x8 hemlock; if the posts are all set even the first should cut to fit and all the others cut to same pattern. When all in and well nailed to position take any short pieces of tree tops or like material, cut one to fit under each center placed on a brick or stone; this will prevent their sagging and keep the bed level. When all are supported take a strip 1x5 nail all round on outside down close to bearers on edge; this forms the outside and is supported by the pieces of post left standing above the bearers. Next take short pieces of board 15 inches long and nail on to carry middle walk, these should be nailed on so that they are level on top, on the ends of these pieces nail more five inch strips to form sides the same as the others. When this is completed take strips (hemlock is best for all this work) six inches wide, start at the bottom and leave a space of one inch between this and the edge board, cut the ends so as to joint in centers of bearers, run the next row of strips same way and continue till the bottom is covered, which when done will be similar to that shown in Fig. 8.

If a flat bench is preferred in the center then it can be built like Fig. 15. For the front bench measure down from the glass on plate 24 inches, stretch a straight line from end to end, put a hemlock board up to this mark for top edge and mark the post on under side of board, notch the post out about half an inch to receive the board which is to act as a stringer to carry bearers for bench, nail into this position and then set the front row of bench posts, leaving the walk whatever width is desired. I prefer to

post put on the same way as in the front—take strips 1x4, measure the height desired and a like piece for the bearer, place the bearer flat and the upright piece on edge, nail together allowing the bearer to rest on string piece for that purpose, place bottom and sides same way as for other. When completed give the whole a good coat of crude petroleum and in 24 hours the house is ready to receive the plants. It adds to the appearance of the house considerably as well as preserves the wood to give all the surfaces (the inside boarding, etc.) a good lime washing; good hot lime wash is best.

The Greenhouses of the Allegheny City Parks.

We give herewith an illustration of the greenhouses erected at a cost of \$35,000 and presented to the city of Allegheny, Pa., by Mr. Henry Phipps, Jr., a wealthy and public spirited citizen.

The palm house is 40x100 without interior supports, curvilinear in form and surrounded on three sides by lean-to plant houses and on the other by a glass corridor connecting all the houses. The height at ridge is about thirty feet; the heating is by means of steam coils at the side, leaving the entire area open for walks and plants. The walks are serpentine in form, most of the plants and trees being permanently planted in the soil. An elaborate rock-work and aquarium is an attractive feature. The construction of the house is chiefly of iron and glass, only sufficient wood being used to form a setting for the glass and protect the metal from the weather. The other

houses of the range provide for the orchids of which there is a large and valuable collection. Houses suitable for the display of chrysanthemums and other specialties, and four full span houses 20 x 120 each used for the park bedding stock. The houses were designed and built by Lord & Burnham, the horticultural architects, Irvington-on-Hudson, N. Y.

from overhead, but is generated wherever the sun's rays strike inside the greenhouse." So far as I am aware all scientific men of the present day accept the wave theory of light. The most generally accepted statement of which is, that the sun consisting of the chemical elements the same as those known to us on the earth, in a state of intense vibratory excitement or an extreme heat beyond

the plants to increased evaporation at a time when it is already suffering from too dry an atmosphere, in consequence of so much moisture being withdrawn by the frost on the glass.

In regard to the stove I would say, it is held that all objects at all temperatures give out invisible rays, which are waves in the ether of space, causing heat when they strike the hand or any object at the

THE GREENHOUSES OF THE ALLEGHENY CITY PARKS.

The houses with their beautiful floral display attract large crowds of the citizens from week to week so that the object of Mr. Phipps' in making the gift to the city is fully attained. The park has been beautified, the citizens benefitted and Mr. Phipps has realized in early life some of the blessings which flow from his own gift. It is stated that he now contemplates building an addition to the present range at an expense of \$10,000, and presenting it also to the city, the addition to be used for aquatic plants. Mr. Wm. Hamilton, the able superintendent, is justly proud of the elegant establishment under his charge.

It is to be hoped that Mr. Phipps' generous example may be followed by wealthy gentlemen in other cities. Certainly those who aim to refine and elevate the people can find no better way of accomplishing it than to bring them into closer relations with the beauties of nature. If half the money which has been spent for paintings—the majority of them but weak representations of natural beauty—had been expended in the creation of beautiful gardens which can be enjoyed by every passer as well as the owner, how much more good it would have done!

Overhead Heating.

Is there any deduction to be drawn from nature's way of supplying the necessary warmth to the earth that would tend to show that placing pipes overhead is most in accordance with nature's methods for surrounding plants with the best conditions for plant life during the twenty-four hours of each day? For I think no one who has had the care of a greenhouse will accept the statement, "That we build our greenhouses and heat them mainly to supplement the deficient supply received from the sun during the short time that the sun remains above the horizon on a winter's day." If we would imitate nature's methods, we must first endeavor to understand them, and not to ridicule the statements of those who may have a better insight into the forces of nature.

Now, your correspondent says: "The statement made in the New York convention was, that the heat does not come

anything known on the earth, communicates to the ether of space waves of a corresponding length to their own dimensions. These waves traverse the ninety odd millions of miles of space and our own atmosphere, generating no heat until their further motion is stopped by striking some object on the surface of the earth. The theory is in accord with common observation. Take a piece of ice on a clear cold zero day and whittle it into the shape of a burning lens, hold it to the sun, then place in its focus a piece of paper, or as some of our sailors amuse themselves, by placing their tobacco in the focus and it is ignited, but the ice remains intensely cold, the very slight rise in temperature being readily accounted for by the ice, not being perfectly transparent. The heat was evidently generated when the wave motion was stopped by the tobacco, just as the cannon ball's temperature is raised to a red heat when it strikes the target.

But perhaps you may say: "No matter whether it is heat that comes from overhead or heat producing waves my pipes placed overhead radiate heat generating waves similar to the sun's, and being placed above the plants must occupy during the short hours of a winter day a more natural position than if placed below. How much is there in this? Try the following experiment on an average winter day (I say winter day because on the average days a very high temperature is not required in the pipes): Place a thermometer where it will give the temperature of the house, another, say six inches above the hot water pipe, another six inches below; the difference between the one placed below and the one that shows the temperature of the house will indicate the amount of heat radiated, deduct this difference from the one placed above and you will have about the difference between the amount of heat radiated and that imparted to the air by contact, and you will find that the amount of heat radiated downwards is insignificant, although during the long winter night the temperature of the pipes being higher, it may be sufficient to have some injurious effect in preventing the leaves of plants acquiring a lower temperature than that of the house, exciting

most distant end of the room, or if the stove were out of doors on a clear cloudless night those waves which are directed upwards will be lost to the earth.

The statement that objects warmed by the sun radiate back into space any heat in excess of the temperature of the surrounding air, is at least misleading, as the leaves of plants, for instance, continue this radiation until a temperature is acquired much below the air that surrounds them and sufficiently low to condense the invisible vapor into water or dew, thereby checking the evaporation of sap, resting the plant, which is doubtless gorged with sap after such nights. I think most observers must have noticed the extra vigor imparted to plants by a succession of dewy nights. But I am not writing against overhead heating, I have no doubt good results may be obtained by that method and that sometimes it may be the best method practicable. My objections are confined to the false theories used in support of it, and most of all, to the statement that the convention of florists in New York ridiculed a statement made by a member, which was strictly correct. I once had in my employ an excellent workman who ridiculed the idea that the earth revolved, one of many proofs assigned that it did not was that a pail of water left standing over night remained full the following morning, whereas, if the world turned around in the meantime it would have been emptied. It would have been a difficult matter to have convinced him that his reasoning was not conclusive, but his ignorance on this point did not interfere with the proper performance of his duties.

The acquisition of some knowledge of those forces—heat and light—which so completely control the growth of plants, is of more importance to us as plant growers than the revolution of the earth, and I am loth to believe that the statement of one of the first laws pertaining to radiant heat and light, viz: "that they consist of waves in the ether of space, which are converted into heat whenever their motion is stopped by material objects," was received with derision by a large body of my fellow florists.

FRANK WHITNALL.

News Notes.

AKRON, O.—Jos. Salmon has built two houses 60x11 each.

NORTH ADAMS, MASS.—Winslow Cady has opened a florist store on Eagle St.

NEW CASTLE, PA.—W. D. Fisher & Sons have built another rose house 100x24.

PHILADELPHIA.—Hugh Graham's Son has built three new houses, one 250x30 and two 250x14.

BALTIMORE.—Thomas Williams, a florist, for twenty-five years a resident of Hampden, died May 23.

SARATOGA SPRINGS, N. Y.—T. J. Totten has built four new houses, two 100x20, one 150x14 and one 80x11.

BALTIMORE.—Mr. Herrmann, the North Avenue florist, is on a two month's trip through France. Samuel Feast & Sons have built another rose house 250x30.

ROCHESTER, N. Y.—New houses have been built here as follows: Salter Bros. two, 100x20; W. H. King one, 80x10; F. Schlegel one, 60x10; James Vick two, 100x20.

ALLEGHENY CITY, PA.—It is reported that Mr. Henry Phipps, Jr., proposes to donate \$10,000 more for an addition to the park greenhouses. The addition will be used for aquatic plants.

CHAMPAIGN, ILL.—Prof. G. E. Morrow is to represent the Agricultural Department at the Jubilee Exhibition of the Royal Agricultural Society of England, to be held during the summer.

QUEBEC.—The Hon. Col. Rhodes has been appointed Commissioner of Agriculture for the Province of Quebec. Col. Rhodes is an enthusiastic horticulturist and it is believed that in his new position he will do good work.

ALLEGHENY CITY, PA.—Ludwig & Richter have removed to the corner of Isabell and Federal streets. David Cass has received \$1000 insurance, which partially covers the damage to his greenhouses by a recent fire.

SPRINGFIELD, MASS.—The annual June rose show of the Hampden County Hort. Society was given up because the roses got the start of the growers by three weeks' time owing to the unusual weather. All the energies of the society will now be concentrated on the chrysanthemum show to be held in the fall.

KANSAS CITY, MO.—May 23 R. S. Brown & Son lost 800 lights of 8x10 glass by hail. The loss was promptly paid by the Hail Association. It was the heaviest hail storm we have ever had here. The stones were as large as hen's eggs and in some places they broke the slates off of houses. Messrs. Brown & Son had all their greenhouse roofs protected by lath shades or they would have lost all their glass.

MONTREAL.—Hail smashed several thousand feet of glass at the Lachine greenhouses belonging to C. Campbell, of 78 Victoria Square. The stones were as large as marbles and did much damage to growing crops in the vicinity. H. J. Pinkerton has finished a house 76x12. Mr. Chas. Gibb, vice-president of the Horticultural Society, is on a ten month's trip to China, Japan, the East Indies and Australia. The Montreal Hort. Society for the Province of Quebec will give an exhibition next September. At the last meeting of the Florists' and Gardeners'

Club an interesting paper on Meteorology was read by Mr. John Perrin, and a paper on Fig Culture by Mr. Hockey, gardener to Mr. John Molson.

KALAMAZOO, MICH.—Joseph Dunkley is rebuilding his houses, putting in new glass and ventilating apparatus. Kirkham & Batson have built two new houses 50 x 18 for roses and carnations. Bochove Bros. are building two 80-foot houses. Mr. S. S. Cobb the superintendent and Mr. Paul the florist are making Mount Home Cemetery very attractive this year. The late frost killed all coleus plants which had been bedded. Snow fell here May 30.

NEW YORK.—The New York Florists' Club will hold its annual election of officers July 10. The treasurer of the Court memorial fund reports \$167 received to date. Mr. D. D. L. Farson, the witty secretary of the Philadelphia Florists' Club, spent the day here recently. Dan's repertoire has been well culled of chestnuts and we may expect a strong batch of brand new puns at Buffalo. Josephus Plenty, the horticultural architect, has removed from 144 Pearl street to 69-73 Broadway.

DETROIT.—Preparations are already being made for the floral and musical festival to be held April next. It has been decided that the booths to be erected by the various charities which will take part will be in imitation of the architecture of various nations and the ladies will dress in the costumes of the respective countries. Last April Dr. R. N. Reynolds with a single microscope exhibited the pollen from flowers. Next year a microscopical department, with about twenty microscopes, will exhibit various minute forms of floral organisms. Arrangements have been made for securing double the room occupied last April.

ST. LOUIS.—The case of the Plant Seed Company vs. the Michel Plant and Seed Company, which the Court of Appeals had under consideration, has been definitely settled by that court. The case was one kindred to trade mark cases. The Plant Seed Company sued Michel for using the words "plant and seed company," when changing the style of the firm. In the lower court there was a verdict in favor of the defendant, the court, however, compelling Michel to change the small "&" to a large "and" on their signs and papers. "The word 'Plant,'" says the court, "is one in very common use and may very properly be used to designate a business, and because the 'Plant family' were the founders of the Plant Seed Company's business, affords no reason why the defendant could not use the word to designate its business, provided it was done for an honest purpose, and with the same proviso the defendant had a right to adopt its present corporate name."

Boston.

J. G. Esler, secretary of the Florists' Hail Association was in town for a few days endeavoring to give hail insurance an impetus in this section. He met with much encouragement and took home with him the names of several of the largest growers as members.

One of the tony clubs at Harvard College gave the contract for class day floral decorations to a dealer in second-hand furniture. Thus is true art encouraged in high places.

The Boston members of the Court memorial committee report gratifying

progress and the Hub's contribution will not fall short.

Jackson Dawson says that grubs and insect pests of all kinds are more numerous this year than ever before in his experience. There are a number of new ones in the list.

M. B. Bunker, florist, is to occupy the store under the Tremont House, which has been conducted for some years by C. H. Hovey.

The Gardeners' and Florists' Club has voted to have the annual harbor excursion take place about middle of July. A committee has been given full power to arrange for the same.

Thos. Stock, of Dorchester, who sued the City of Boston for damages resulting from digging up the street in the winter season, and the consequent exposure and freezing of water pipes has secured a verdict in his favor for \$2,057, and the award has been reaffirmed in the Supreme Court.

A magnificent variety of *Cattleya gigas* flowered by Pitcher & Manda has, like many other good things, passed into the hands of Mr. F. L. Ames at about the price of a good house lot. There are two spikes bearing four and six flowers respectively, the blooms measuring eleven inches across. The color is deep lake, purple lip, with yellow eye radiating into throat and lip. The leaf is twelve inches long and five inches broad, truly a mammoth variety. W. J. S.

Fruit Nomenclature.

It has now been six years since our beloved and lamented Wilder delivered himself before the American Pomological Society of the reformatory ideas regarding the nomenclature of our fruits, which have been seconded and echoed by all sensible and progressive pomologists. Nearly all the rural papers have copied what he and others have said on the subject. The committees on nomenclature of the American Pomological and American Horticultural Societies have officially reported in favor of measures looking to the practical application of the new ideas, and so have some of the State Horticultural Societies, and the former society has prepared and adopted a revised list of the leading fruits of our country. This revision has been made with the most sacrificing care and by the best pomologists of the day. It has been the idea to shorten, simplify, eliminate and put into as plain English as possible the conglomeration of names that have been dug out of all the nations of the earth. The task has been far from a light one, and especially with the Russian list, and I am sorry to say it does seem in a great measure to have been a thankless one. I hope that the future will prove that this is a mistaken view, and that the day will soon come when the association which I have the honor and great pleasure to now address will be the active agent in carrying into effect what the other societies and private individuals have so well planned and begun.

The members of this association have it in their power above all men to carry out this needed reform. But have you done so? Have you ever made the attempt? Why has not the association taken official action to establish uniformity of names for our fruits? Certainly such a course would be most happy and profitable in its results. The nurseryman is the educator of the public as to the names applied to the fruits grown. Even the most ignorant tree peddler is taken every day by some one as authority

in this matter, and how important that the lists put into his hands should be both uniform and correct. But how few nurserymen have made practical application of the rules that as members of one or more of the pomological or horticultural societies they may have helped to make or endorse. A careful examination of the nursery catalogues shows an array of synonyms that is truly discouraging. We find the Ben Davis apple called New York Pippin in some of the eastern states, and Kentucky Red in the south; we have Gilpin called Carthouse; Romanite, Little Romanite and Little Red Romanite, according to previous knowledge, or, it may be, the fancy of the nurseryman. Some still hold to the old, useless and long ago discarded appendage "Pippin," which was first attached to Grimes Golden. The much simpler and equally intelligible name Westfield is often seen with the "Seek-no further" attachment. Angouleme pear has its old prefix and suffix both carefully preserved. Cumberland strawberry has its "Triumph," and Woodruff and Wyoming grapes have their "Red" superfluities. The crop of swelling "Wonderfuls" and overloaded "Prolifics" seems to be still growing.

It is easy to see how all this confusion and useless bombast is originated and propagated. Some nurseryman originates or purchases the stock of some new thing, and not to be outdone in a name he goes in for all the thing is worth, and perhaps more too. Or he may, in his honest, ignorant simplicity, have found some old variety and renamed it.

Might not this association take some action that would in a few years induce the nurserymen to submit their catalogues to a committee on nomenclature or some other authority by which the names may be corrected, so that the same fruits may in time have the names in all places? Of course it will be impossible to change the local names, but the annoyance and inconvenience of teaching the people the correct names will be far less than to continue the present custom of every one using such names as may suit their fancy.

The rules of the American Pomological Society regarding the naming of new fruits are quite sufficient, but they lack practical application by the nurserymen of the country. If they were lived up to there would be great advancement in knowledge, and the confusion which now occurs would soon cease.

I would most sincerely and respectfully urge you as pomologists and as business men to not only take this matter into consideration, but to take steps to apply the ideas which, I presume, we all agree, are fraught with good.

[Read before the Nurserymen's Convention at Chicago by H. E. VanDeman.]

Pot Washing Machine.

The accompanying illustration shows a simple machine which Messrs. Alburger & Bro., Philadelphia, use to great advantage in cleaning pots. In every greenhouse establishment considerable quantities of pots are used several times and all know that such should be washed and cleaned before being used over again. Washing and cleaning by hand is the usual method, and a slow one it is, but by the use of this simple affair it can be done with great rapidity.

The brushes on the end of the shaft are made of a shape to fit the inside of the pot, and several sizes are used, though one brush does the work for a number of

sizes of pots. The shaft of the machine shown is revolved by steam power, but one can be easily arranged to be worked by hand power, and even in this way two boys—one to hold the pots and another to supply the power—can accomplish as much work as four or five working by hand.

Certainly such a machine will pay for itself in a very short time where a large quantity of pots are to be cleaned annually, as the expense of construction is comparatively slight. The wheel which

POT WASHING MACHINE.

supplies the power should of course be considerably larger than the one on the shaft, thus causing the shaft to revolve with sufficient rapidity to be effective and do quick work.

GERANIUM BRUANTI.—I would like to ask the readers of the *FLORIST* who have purchased Geranium "Bruanti" if they find any difference between it and Double Gen. Grant? I fail to see any myself.
Montreal. JAMES MCKENNA.

LOUISVILLE, KY.—Florist George T. Hodges recently left his place in charge of an employee named John R. Stoll for the day. When he returned Stoll was missing and it was discovered that he had broken into a desk and stolen \$54 before leaving. Stoll is but 18 years old, German by birth but speaks English very plainly, of medium height and rather heavy set. The fore finger of his left hand had been cut off to the first joint.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By thoroughly experienced florist—private or commercial.
S. HATSON, 223 N. Park St., Kalamazoo, Mich.

SITUATION WANTED—By young man to learn florist business with a good firm. Address at once.
F. C. DOOR, 37 Poplar Ave., Columbus, O.

SITUATION WANTED—As superintendent of a cemetery. Good references, and 11 years' experience. Address SCOTT, care American Florist.

SITUATION WANTED—By a young man, as under gardener; private place preferred; 2 years' experience in general greenhouse work; age 21; strictly temperate. Good references. Address WILLIAM STUART, Winchendon, Mass.

SITUATION WANTED—As head gardener on small private place, or as assistant; married; aged 29; understand propagating, greenhouse and general work on private place, sober, trustworthy, good recommendations. A. B. Am. Florist, Chicago.

SITUATION WANTED—In Oregon or N. California by German, age 26; 10 years' experience. Specially rose growing for cut flowers. Also culture of general greenhouse stock. Best references. Address stating terms. B. B. T. Page St., Toledo, Ohio.

SITUATION WANTED—By a single man, thoroughly experienced rose grower and general greenhouse stock; good propagator. Competent to take charge of commercial or private place. Good references. Address FLOKIST, 51 E. 13th St., N. Y.

INCREASED EXPRESS RATES ON PLANTS

A new classification card arranged by the Express Companies' Traffic Committee went into effect June 15, in which paragraph No. 9 reads: "Flowering and Ornamental Plants not less than double merchandise rates," thus doubling the previous rate.

As "Flowering and ornamental plants" most effectually covers all plants shipped by the trade we called on the Traffic Manager of one of the companies for information. After some hesitation he interpreted the new rule as applying only to plants not entirely enclosed in boxes or stout crates, but admitted that agents generally might interpret it to cover all florists' plants however packed.

It seems that the rate was intended to reach those shipments of single specimen plants shipped without any crating and boxes containing plants setting upright without any cover over them. And it can not be denied that these are difficult freight to handle, and that they take up a great deal of room, owing to the fact that other freight can not be piled upon them.

At our request the Traffic Manager visited constructed a new order to read: "Plants entirely enclosed by a box or stout crate may be carried at a single rate." This will be submitted to the other members of the Traffic Committee, if accepted by them it will go into effect immediately thereafter and will make the matter clear to agents. In the mean time if any agent attempts to collect double merchandise rates on plants boxed or crated as above described object vigorously and pay that rate only under protest, keeping your receipt so that you may collect the overcharge back from the company through its claim agent.

RENAMING.

We have received communications from several subscribers stating that the geraniums Bruanti and Double Gen. Grant are identical, and in a response to a note Mr. John Thorpe sends us the following interesting information:

"Bruanti is not Double Gen. Grant, but Double Gen. Grant is Heteranthe. It is one of these cases of suborning, and I think the change was made near New York. The first time I saw Double Gen. Grant I called attention to its being under a wrong name. The reply was that it sold better as Double Gen. Grant and it was not worth while to change it. Bruanti is one of the same type as Heteranthe and should be grown in its place as a bedder. These are some of the Inquinans section such as the Gloire de Nancy type but Mr. Bruant has refined their habits and they are more floriferous. Heteranthe is now about six years old—or it may be seven."

Will the party who did this bit of renaming please step forward and show why he should not be convicted of swindling. This matter of renaming must be dealt with in a summary manner. Quiet submission to the impositions of rascals who practice such frauds is not only disgraceful but may be considered to a certain extent as abetting their villainy. It is indeed surprising that men who would scorn to steal money directly out of your pocket find it compatible with their ideas of morality to steal it indirectly through selling plants for what they are not. A man who knowingly sells you \$10 worth of plants under a false name is just as much a thief as the pickpocket who surreptitiously relieves you of a like amount. And the result of the first thief's work is more farreaching in its evil results as the first victim may innocently propagate and perpetuate the swindle.

The Committee on Nomenclature of the S. A. F. has been appointed to unravel the tangle caused by practices of this kind, but what shall be done in the future? Shall the committee be kept busy straightening out the rascally work of these swindlers as fast as done? Certainly this is asking too much. Some means must be provided for the prevention of the iniquity in the future, and the only effective remedy we can see lies in the law. Let us make common cause in this matter. Let us ferret out the men who rename and prosecute them and publish them to the world. Let us not stop when we find that some of them are men whom we would least suspect of such rascality, but let each one take the consequences whoever he may be. In this way and in this way only will effective work be done.

And let us not forget that he who knowingly perpetuates a swindle is equally as guilty as he who originates it.

FLORAL ARRANGEMENT.—In this issue appears the first of a series of articles on floral arrangement, which will we believe be of great assistance to a majority of our readers. In response to numerous requests for illustrations of simple, every day arrangements Mr. Battles has at our suggestion started with a simple corsage bouquet. This may appear to some to be rather too elementary, but we are persuaded that instruction even of so elementary a character will be appreciated by a large proportion of our readers. In future issues we shall illustrate baskets of the size and style most commonly called for, filled in a variety of ways, showing how the most effective arrangement may be made with a comparatively small quantity of material, and finally other simple and graceful arrangements. The proper contrasts of colors to produce the best effects will also be touched upon.

QUALITY.—Don't forget that quality is becoming annually more essential in bringing financial success in flower growing. Flower buyers are becoming more and more fastidious, and as flowers are now mainly sold by the dozen each individual must pass inspection. The day when the poorest could be used up in baskets and designs is practically past; it is no longer a cry for flowers of any kind so long as they are actually flowers, but for flowers of good quality only. With the largely increased production comes selection on the part of the buyer, and while at some seasons of the year first quality stock means merely a higher price, at others it means sales as against no returns whatever. In making arrange-

ments for next season provide for quality at the expense of quantity rather than for quantity at the expense of quality.

THE FUTURE of the shipping trade in cut flowers most certainly depends upon skillful packing, and too much care can not be expended upon this important detail by those who desire to increase their trade of this character. No matter how fine the flowers when shipped if they are damaged in transit their quality is lost to the consignee and he will not be apt to order from a distance again except as a last resort. Every shipment which is received in good condition builds up the shipping trade, but every one damaged in transit gives it a set-back.

PROFESSOR REICHENBACH'S WILL directs that his collection of dried orchid specimens and drawings shall be sealed up in cases and so retained for twenty-five years from the date of his death. The value of the collection to botanists is very great, and through the Professor's peculiar will is lost to the present generation. As most of the material comprising the collection was contributed the disposition of it is freely criticised by those interested in the scientific study of orchids.

THE FLORIST CLUBS can greatly assist the S. A. F. Committee on Nomenclature by taking up the matter at their meetings. Many synonyms could be brought to light by members and the material forwarded by the secretary to the S. A. F. committee to be acted upon by it. This is one way in which the Florist Clubs and the national society can work together to advantage.

A LARGE ROSE.—A bloom of Paul Neron measuring six inches across is sent us by the Mendenhall Greenhouse, Minneapolis, with a note saying: "This rose was grown in the open ground by Mr. Frank H. Holmes, 1222 Hennepin Ave., Minneapolis. The bush was set out three years ago. The rose measured 6½ inches across when cut. Is it a Paul Neron?" It is undoubtedly a Neron.

DO YOU KNOW what your plants cost you to grow? Do you know when they net you a profit and when they make you a loss? Isn't it worth some trouble to find out? We think so. You may not agree with us now but you will later on when you find your balance on the wrong side of the sheet and can't tell exactly why.

HAIL INSURANCE has received a strong impetus from the recent hail storms and many florists are now taking advantage of the protection afforded by the Hail Association. Some would have been better off if they had got in earlier. Is your glass protected? If not, now is the accepted time to secure protection.

YOU WOULDN'T think much of a landscape or portrait painter that did not have a thorough knowledge of colors would you? Then how can you be a "Floral Artist" unless you have a fair knowledge of the same subject? You will have instruction in early numbers. Don't pass it by thoughtlessly.

LET US PRAY for the renamer and the substitutor, but let us give them a taste of the law too. That will quicken their consciences in a way that nothing else will.

THERE ARE tricks in all trades but ours. RENAMER.

IN ALL other trades there are tricks but none in ours. SUBSTITUTOR.

Catalogues Received.

J. M. Thorburn & Co., New York, forcing bulbs and seeds; United States Nurseries, Short Hills, N. J., orchids; Ang. Rolker & Sons, New York, flower seeds for summer sowing; C. G. Van Tubergen, Jr., Zwaneburg, Haarlem, Holland, Dutch bulbs; Wm. B. Hartland, Cork, Ireland, plants and bulbs; Hill & Co., Richmond, Ind., wholesale list plants; Geo. W. Miller, Lake View, Chicago, wholesale plants; A. M. Herr, Lancaster, Pa., pansies and smilax.

COLORS IN AZALEA MOLLIIS.—A reader asks: "Are there more colors than two in A. mollis? If so, is there any white?" We have about thirty distinct kinds and all differ a little in color from one another. The colors vary from whitish yellow to deep flame, but we have got no pure white flowered variety, nor do I know of any. But I find a colored figure of a white flowered one in the *London Garden*, page 428, May 26, 1877.

OUR LARGEST white flower in hardy azaleas is borne by *Azalea Indica alba*. This variety appears to be hardy enough here, still I would not recommend it for outdoor planting north of New York.

The Seed Trade.

SEED TRADE ASSOCIATION.

H. W. JOHNSON, Philadelphia, president; J. C. VAUGHAN, Chicago, vice-president; ALBERT M. McCULLOUGH, Cincinnati, secretary and treasurer; FRANK T. EMERSON, Omaha, assistant secretary. The eighth annual meeting at Saratoga Springs, N. Y., June, 1890.

Meeting of the American Seed Trade Association at Washington.

The association assembled at the Arlington House, June 11, Vice President James H. Allan, Picton, Ont., in the chair. There were two sessions held daily on Tuesday and Wednesday and another Thursday morning when the convention adjourned, after naming Saratoga Springs, N. Y., as the next place of meeting. The election of officers resulted as stated in our last issue.

Among those present were the following:

Adams, E D of Comstock, Ferre & Co.
Adams, H A
Allan, J H and wife
Allen, C L
Barteldes, F W and wife
Bolgiano, J
Brown, A E of W Atlee Burpee & Co.

Leonard, S F
Low, Aaron
McAllister, F E
McCullough, Albert and wife
McCullough, J Chas and wife
Maule, Wm H
Meggatt, Wm and wife
Nungesser, Henry
Parsons, E B
Price & Reed
Rice, R Niles of Jerome B Rice & Co.
Robinson, W T of Parker & Wood
Salzer, Henry A
Stecher, F A
Vaughan, J C
Wall, H M of Beatty & Co.
Wood, H W
Woodruff, S D

There were several applications for membership and five were elected as follows: Messrs. Chas. Henderson, S. D. Woodruff, J. H. Dunlop, B. P. Critchell, John Gardiner & Co.

Some twelve or fifteen ladies, wives of members were present. The meeting on the whole was considerable larger than had been anticipated. A uniform disclaimer of responsibility in selling seeds was adopted, and considerable other business of interest to the seed trade only.

BOSTON.—C. H. Thompson & Co. are selling their entire stock of seeds, implements, etc. at reduced prices preparatory to closing up their business August 1. Gilbride & Grey is the firm style of the new implement and seed concern who opened their store at 49 South Market St. in May. They are young men of push and have come to stay. Trade on the

whole in seeds and light implements has been very satisfactory. The season has been very unfavorable for some of the tender market garden crops, and consequently some complaint is heard, especially of beaus, which are blighting badly. Mr. Robert Farquhar, of R & J. Farquhar & Co., is spending the summer in Europe with a view to both pleasure and profit. Mr. F. L. Temple, of Temple & Beard, Shady Hill Nurseries, Cambridge, sailed recently for Europe. He will attend the Paris Exposition and will look among the growers for valuable novelties, particularly in herbaceous shrubs and plants. Mr. Wm. T. Wood, of Parker & Wood, is in Rochester, N. Y., hoping that charge and rest will restore his failing health. Mr. Archibald Smith, formerly with C. H. Thompson & Co., is in charge of Jos. Breck & Son's seed department.

DES MOINES, IOWA.—The assignment of the Iowa Seed Company was filed yesterday by the firm, H. C. Wisor and M. L. Page, the assignee being S. L. Fuller. The liabilities are \$17,973.10, the heaviest creditors being S. Freeman Son's Manufacturing Company, \$6,969.20; Valley National Bank, \$2,500; A. E. Cross, \$1,000. The last two and others are secured. The assets are \$18,000 to \$20,000. The causes are their heavy loss by fire last year, about \$6,000; their loss by hail this year and last, and the frost; also losses by Eastern failure to the extent of \$4,000 or \$5,000. The company expects to revive and open again soon.—*Iowa State Register*, June 16.

Among the creditors are The A. B. Cleveland Co., about \$1,200, and Northrup, Braslan & Goodwin Co., about \$600. It is expected they will make a proposition to their creditors about June 25 looking towards a continuance of the business. Local Des Moines florists and Muscatine plant growers are also reported to have suffered by this failure.

ROCKFORD, ILL.—J. B. Root & Co. confessed judgment for \$1,350 in favor of Mrs. E. A. Root on June 13. Liabilities estimated at \$3000. Assets from \$1500 to \$2000. Mr. C. R. Root who has had the active management states that during the past five years he has made money only the first two and has lost money each season the past three years. It seems that the judgment note was for balance of purchase money given by C. R. Root when he purchased the business from J. B. Root five years ago. The stock and fixtures were sold for \$700 on June 24 on the judgment claim of \$1,300. A compromise is talked of.

NEW YORK—Ang. Rolker & Sons have opened an auction house for plant sales at their warehouse, 42 and 44 Dey street. This is a project which Mr. August Rolker has had in view for over a year, he having inspected all the large European plant markets last summer with this project in mind.

ONE of the old stand-by seed and plant establishments in New York is said to be in the market for sale. When it is formally announced, it will be a big surprise to many people.—*Inter. Hort.*, May 15. Who is it?

CROSSMAN BROS., Rochester, are reported to have suffered serious loss in growing crops of onion seed and tomato plants destroyed by hail about June 13.

REPORTS from Hamburg, Germany, May 31, indicate excellent prospects for a good crop of lily of the valley pips.

NO REPORT was made at the Washington meeting on the number of onion sets thrown away this season.

E. GERMAIN, of the Germain Seed Co. at Los Angeles, represents Southern California at the Paris Exposition.

PASSED THROUGH Chicago the past week: Wm. A. Cox, of T. A. Cox & Co., San Francisco, H. A. Salzer, W. B. Hayt.

MESSRS. Fottler and Robinson were the only Boston representatives present at the convention.

THE NEW WATERMELON Ruby and Gold is said to have been sold to John Lewis Childs.

WILL THERE be a general scramble to get the catalogues for 1890 on a "hard times" basis?

G. W. PLATT, a seed and implement dealer at Benton Harbor, Mich., has failed.

ONION SEED is expected to sell low in the wholesale market the coming season.

MR. BURT, with S. L. Allen & Co., will sail for Paris the last of June.

TRY DREER'S GARDEN SEEDS

MRS. J. S. R. THOMSON, Spartanburg, S. C.

WOOTTON TESTIMONIALS.

We quote below a few of the many gratifying letters received from our patrons :

PETER HENDERSON, N. Y.

"I am happy to state that all of the plants received from you in the first shipment, probably 950, were planted out in the bench and are at the present time in as good condition as it is possible for plants of that size to be, not a speck of mildew or other disease, and altogether look very promising. There is no doubt in my opinion that it is going to be a particularly free blooming variety, every shoot that it makes has a bud. Altogether I am well pleased with the rose."

E. HIPPARD, Youngstown, Ohio.

"Did not lose one plant out of 202 received, and never saw such vigorous growth. We have them in 4 inch pots at present (June 18th) and they have filled pots with roots almost ready for 5 inch pots. If the rose is as easily managed in winter there is no doubt it will supersede all other high colored roses. It is very free blooming."

C. M. FICK, Philadelphia, Pa.

"I have not lost any of the Woottons. The present condition is very encouraging. Have just repotted them in 4-inch pots and are looking fine (June 13th)."

T. J. TOTTEN, Saratoga Springs, N. Y.

"The plants seem to be coming on nicely. Young plants keep budding but we pinch them off."

"The Woottons arrived in good shape and are clean and well grown cuttings. The plants grow all along; they show vigor and are as nice young stock as anybody need wish for. I bought them principally because a seedling from Bon Silene X Louis Van Houtte cannot be but good."

J. M. JORDAN, JORDAN FLORAL COMPANY, St. Louis, Mo.

"The Woottons were received; are all alive and growing, healthy and fine, having flower buds in profusion; am well pleased."

LEWIS & BROTHERS, Wilmington, Del.

"The plants (Woottons) are in fine condition, as fine as any man can expect. They are making fine, stout plants and strong root. I think it is a fine rose, and we are perfectly satisfied with it. The Beauties are also doing fine."

C. E. COOK, Madison, N. J.

"I have never had young plants more vigorous. They are ahead of any plants I have of their age, and promise great strength. I have kept the buds pinched back, but judge they will bloom well from the show they make for buds."

BIDWELL BROTHERS, Jersey City, N. J.

"The Woottons received from you 18th of May last, are all alive and doing well. They are growing vigorously and promise to be thrifty, healthy plants, without spot or blennish. Buds are already forming and we would say they will prove to be as prolific in flower as they are vigorous in growth."

J. Y. SMITH, Doylestown, Pa.

"The plants are doing well, and I think it will be THE rose."

CHAS. F. EVANS, EVANS & BATTLES, Philadelphia, Pa.

"They are all alive and 'growing nicely.'"

J. U. KUMERLE & SON, Newark, N. J.

"The Woottons arrived this afternoon in good order, (June 14th)."

H. C. BUTTERWORTH, Toronto, Canada.

"My plants at the present time are very vigorous, not the least sign of spot or any other disease. While all my roses were more or less covered with mildew on account of cold, damp weather, yours were free and healthy. I think according to my experience with so young plants the prospects are good for vigorous and abundant bloom."

R. CALVERT, La Crosse, Wis.

"Have lost none. All in good condition."

JNO. G. HERRICK, Stoneham, Mass.

"Have lost none. The plants are vigorous."

J. W. NORTH, St. Louis, Mo.

"They are growing finely. They show a bud on every young shoot."

BELA F. LINCOLN, West Hingham, Mass.

"The Woottons are doing nicely, and are fine, healthy plants."

G. H. ROWDEN, Wallingford, Conn.

"Are growing nicely."

PROBST BROTHERS, Kansas City, Mo.

"The plants are growing and in good condition."

E. T. HARVEY, Bond Hill, Ohio.

"I have not lost any of the Wootton, and they are looking well"

B. ONORATO, New Orleans, La.

"The plants are doing well and making new growth"

NOW READY FOR DELIVERY!

— OUR —

Celebrated New Pedigree Seedling Roses

— FOR 1889. —

MRS. JAMES WILSON, (Tea). In this Superb Novelty we have the long looked for pure yellow "Catherine Mermet." The growth of the plant is very vigorous, the habit excellent, and the flowers, which are very large are thrown up well above the foliage, and are produced in extraordinary profusion. A magnificent forcing Rose of First Quality.

Strong plants in 5-inch pots, \$2.00 each; 13 for \$21.00.

LADY ARTHUR HILL, (H. P.) This splendid new Rose is a seedling from "Beauty of Waltham." Color rosy lilac, quite a new shade, unique form and a profuse blooming variety. Very superior.

Strong plants in 5-inch pots, \$2.00 each; 13 for \$21.00.

MR. JAMES BROWNLOW, (H. P.) A truly magnificent variety of very large size and good form. The color is brilliant carmine, very novel, and growth very robust. It is a marvellously free flowering variety on cut back plants and is especially adapted for forcing.

Strong plants in 5-inch pots, \$2.00 each; 13 for \$21.00.

FIRST-CLASS CERTIFICATES HAVE BEEN AWARDED TO THESE ROSES.

Descriptive list will be mailed Free on application to the raisers,

JACOB SCHULZ,

LOUISVILLE, KY.

GERANIUM MRS. PARKER.—A western wholesale florist advertises in his price list the "new" double-flowering silver-leaved geranium Mrs. Parker, and asks a good big price for it too. It wasn't advertised as "new" when I first received it some three years since. However, the gentleman evidently knows a good thing when he sees it, for Mrs. Parker is with us the best silver-leaved geranium both on the bench and out of doors that the writer has seen. If he can induce florists to grow it perhaps we can forgive his adjective.

Exhibits at the Buffalo Convention.

To those intending to exhibit at the Buffalo convention the following circular from the secretary of the local committee will be of interest:

Card to Exhibitors:—The space engaged for Exhibits being somewhat limited, applications for same should be made at once, both for purposes of being in time to secure a location and to enable the local committee to determine about securing further room if such be needed.

By action of the Executive Committee a rental of 25 cents per square foot for table, wall or platform space will be charged all exhibits, excepting plants and flowers, which will be entered free of any charge for space. All tables and wall spaces for supplies and light goods will be of a uniform measure of three feet in width. Boilers and heavy goods will be accommodated on the ground floor, and space in square feet provided as nearly as possible to meet the requirements of exhibitors.

Entries will be booked and space assigned in the order in which the same are received. State the nature of exhibit the space desired in square feet, and whether table, wall, platform or floor space is wanted. Address

DAN'L B. LONG, Sec'y.,

JAS. BACKHOUSE & SON

THE NURSERIES,

YORK, ENGLAND,

invite the attention of the American trade to the following **SPECIAL STOCKS**, for which they have long been famous:

ORCHIDS.

Comprising Cattleyas, Lælias, Odontoglossums, etc., which they offer in established plants by the dozen, hundred or thousand. Disas (the finest stock of flowering plants in Europe), and other popular genera in choice leading kinds together with many rare and unique varieties.

FERNS.

These have long been a specialty, and our stock of Tree Ferns, Filmy Ferns, Gleichenias, Maidenhairs, and other popular kinds, is unsurpassed. Very moderate quotations can be given for grand specimen Tree Ferns; and for other kinds by the dozen, hundred or thousand.

Stove and Greenhouse Plants.

The leading kinds in large quantities. Special stocks of Red and White Lapagerias; specimen Camellias in all sizes, including large plants of Double Whites; Imantophyllums (Clivias), Fucharias, Azalea rosæflora and other fine varieties, Rhododendrons, etc.; together with extra strong plants of stove and greenhouse Climbers.

Alpine and Herbaceous Plants.

For many years we have given special attention to gathering together an extensive collection of the most popular plants of Old English gardens; whilst our collectors and correspondents in the Alps, Pyrenees, Tyrol and other mountainous districts of Europe; as well as in Asia Minor, the Caucasus, Turkestan and Siberia, India, Japan, Australia and New Zealand, have enriched our stock, which for extent and variety is unsurpassed in the Trade. Of Auriculas, Campanulas, Delphiniums, Fritillarias, Narcissi, Phloxes, Primulas, Pyrethrums, Spireas, Iris, Hellebores, etc., etc. We cultivate the choicest kinds in large quantities.

Evergreen & Flowering Trees & Shrubs

in the best and hardiest varieties are extensively cultivated, including North American, Japanese and other CONIFERAE which our soil and climate admirably suit. Also Hardy Climbers in great variety.

FRUIT TREES

are also largely grown in the best and most productive sorts.

VEGETABLE SEEDS.

Peas, Broccoli, Cabbage, etc., of the newest and best varieties.

Our representative, MR. S. MARSHALL, expects to visit the States, arriving about end of July, and will be happy to wait upon purchasers, or send special quotations on application. Address, GRAND CENTRAL HOTEL, NEW YORK CITY.

Marie Louise and Queen Victoria Violets for Fall Delivery. Prices upon application.

Chicago.

Lincoln Park has a new attraction this summer in the shape of two adjoining ponds of aquatics; there are two specimens of Victoria regia in addition to a fine assortment of nymphæas and nelumbiums. The ponds have steam pipes running through them so they may be heated when necessary. The fancy bedding at this park is much the same as last year. Santolina, which is so useful in the east, will not stand through the summer here.

The spring plant trade has so far not equalled that of last year. During the early warm spell it started off with a rush but the later cold disagreeable weather cut it short and it didn't seem to fully recover when warm weather finally came again.

The late cold weather killed a lot of coleus which had been bedded at South Park, as well as doing damage to other stock. Bedding plants do not look nearly as well as usual at this time in consequence.

Walter Heffron of Washington Heights is laid up with a broken arm. He was thrown from a buggy while driving a fractious horse.

BEDDING PLANTS.

Alternantheras, Paronychioides major, Aurea nana, Spathulata, Versicolor, \$1.00 per 100 \$3.00 per 1000; fine, strong plants from last fall propagation.

Coleus, in 20 varieties, all good bedding varieties, \$3.00 per 100, \$25.00 per 1000. A splendid collection of 2-inch Hybrids; also Imported Hybrids, worked low on Manetti Stock, \$3.00 per doz. \$20.00 per 100. A fine, healthy stock of Teas and Polyanthas. A large stock of Gen'l Jacquemont, 2-inch, at \$6.00 per 100; 3-inch, strong, at \$10.00 per 100; 4-inch, at \$15.00.

GERANIUMS.

Novelties in Geraniums at \$10.00 per 100. General Collection of double and single, at \$4.00 per 100, \$30.00 per 1000.

TOTTENHAM, LONDON, ENGLAND.

An Ice Storm.

The hail-storm or rather ice-storm—for the stones were not the usual round pellets but pieces of ice, oblong, pointed, flat and other forms—that visited this section May 15, reaching fully 100 miles from west to east and of varying width, struck our locality forcibly. It riddled my greenhouses leaving here and there odd panes and a few rows that were sheltered by a shed. I estimate the broken glass at about 12,000 8x10 panes. Plants were broken and chopped up considerably and injured as much since by being exposed to the continued cold weather. Think it will cost about \$1000 to repair the damage, including some renewal of woodwork. Have commenced repairs, and when I have got some glass to insure, hail insurance will be in order.

Ives' Putty Machine.

Patented Jan. 8, 1887.

The best device ever invented for laying putty. With this you can make old leaky sash perfectly tight without removing the glass. It will do the work of five men in bedding glass.

Send by Express on receipt of price, \$3.00.

J. H. IVES, DANBURY, CONN.

HUGHES'
SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

RAILROAD RATES—The various traffic associations have granted a rate of a fare and a third for the round trip on the certificate plan, to the Buffalo convention. As most railroads sell excursion tickets to Niagara Falls at low rates, these may be used if better rates can be secured in that way as nearly all roads running to the Falls go through Buffalo.

SOCIETY OF AMERICAN FLORISTS.

FIFTH ANNUAL MEETING

At BUFFALO, N. Y.

August 20, 21, 22, 1889.

WM. J. STEWART, Secretary, 67 Bromfield St., Boston, Mass.; M. A. HUNT, Treasurer, Terre Haute, Ind.

The annual dues of \$3. may be forwarded to either the secretary or treasurer before the meeting who will return a receipt and badge by mail. In this way you can materially lighten their labors at the convention and avoid delay in securing your badge on the opening day.

RAILROAD RATES.—To secure the rate made by the passenger associations when going to the Buffalo convention next month you will pay full fare going and when purchasing your ticket ask for a certificate of such purchase from the agent selling you the ticket. This when countersigned by the secretary at the convention will be an order to the Buffalo agent to sell you a return ticket at one third fare. Ticket agents are supplied with blank forms for the certificates.

THE SPRING PLANT TRADE.

LANCASTER, PA.—About 10 per cent greater than last year; no change in prices; collections somewhat better.

DORCHESTER, MASS.—A slight decrease; prices generally lower; 4-inch geraniums retailed at \$1.25 to \$1.50 per dozen.

LOCKPORT, N. Y.—About the same as last year; no change in prices; collections better; 4 inch geraniums retailed at \$1 a dozen.

SIOUX CITY, IA.—About 20 per cent increase; no change in prices; collections good; 4 inch geraniums 25 cents each, \$2 to \$2.50 per dozen.

MINNEAPOLIS—Considerably larger; prices not held very firm; collections rather slow; 4-inch geraniums retailed at \$1.50 to \$2 a dozen.

POUGHKEEPSIE, N. Y.—A decrease; prices lower; good pansies sold well; plant trade is overdone; cut prices prevailed; a large amount of stock left over.

HOLYOKE, MASS.—About 10 per cent larger; no change in prices; more demand for perennials; collections about as usual; 4-inch geraniums retailed at \$1.25 a dozen.

ATLANTA, GA.—Trade about the same as last year; prices also about the same, or possibly a little lower; 4-inch geraniums retailed at from \$1.25 to \$1.50 a dozen.

LAWRENCE, KAN.—About the same as last year, no change in prices; collections very prompt; no sale for chrysanthemums; 4-inch geraniums retailed at \$2 a dozen.

KEOKUK, IA.—Some increase over last year, possibly one-fourth, prices and collections about the same as last year; 4-inch geraniums retailed at 15 to 20 cents each.

AURORA, ILL.—A slight increase; prices about the same; collections rather slow, but perhaps not more so than usual; 4-inch geraniums retailed at from 15 to 20 cents each.

TERRE HAUTE, IND.—About one third less than last year; prices about the same; less call for verbenas; collections about as usual; 4-inch geraniums retailed at \$1.50 a dozen.

ELGIN, ILL.—About 12 per cent decrease; no change in prices; less call for fuchsias; collections about as usual; 4-inch geraniums retailed at 20 to 25 cents each, \$2 per dozen.

FT. WAYNE, IND.—Slight increase over last year; no change in prices or collections; increased demand for all bedding stuff, especially verbenas; 4-inch geraniums retailed at \$1.50 a dozen.

WORCESTER, MASS.—I think a little larger; prices about the same; increased call for geraniums and less demand for foliage plants; geraniums in 4-inch pots retailed at \$1.50 per dozen.

LOWELL, MASS.—Some increase over last year; no change in prices; an increased demand for hardy roses; collections about as usual; 4-inch geraniums retailed at \$1 to \$1.50 a dozen.

ADRIAN, MICH.—About 3 per cent larger than last year; prices ruled the same; increased call for coleus and geraniums; collections better; 4-inch geraniums retailed at \$1.50 per dozen.

DAYTON, O.—Spring trade about as usual; prices a little lower if anything; lessened demand for coleus and begonias; collections very slow; 4-inch geraniums retailed at \$1 a dozen and upward.

OSWEGO, N. Y.—About 25 per cent increase; prices somewhat lower; increased call for carnations for summer bloom; less call for Rex begonias; collections about as usual; 4 inch geraniums \$1.50 a dozen.

FT. SCOTT, KAN.—About 40 per cent increase over last year; prices about 10 per cent higher; more demand for verbenas, less for geraniums; collections slower; 4 inch geraniums retailed at \$1.25 a dozen.

MILWAUKEE, WIS.—About 10 per cent increase; no change in prices; increased demand for geraniums, alternantheras and tuberous begonias; collections about as usual; 4-inch geraniums retailed at 10 cents each.

NEWTOWN, PA.—About 10 per cent increase; no change in prices; increased demand for geraniums and Rex begonias, less for Begonia rubra; collections about as usual; 4 inch geraniums retailed at 75 cents a dozen.

CEDAR RAPIDS, IA.—Smaller than last year, 25 per cent decrease, perhaps more; no change in prices; less demand for all soft stuff that is easily propagated; collections slower; 4 inch geraniums retailed at \$2.25 per dozen.

HAMILTON, O.—About 9 per cent increase over last year; prices ruled the same; increased demand for H. P. roses, less for petunias and lobellias; collections good; first class geraniums in 4-inch pots retailed at \$1 a dozen.

MUSCATINE, IA.—About 20 per cent smaller than last year; prices about the same; increased call for roses and less for verbenas; collections better; 4-inch geraniums retailed at \$2 a dozen. Cut flower trade better than ever.

ANN ARBOR, MICH.—A slight increase, possibly 2 or 3 per cent; no change in prices; increased demand for coleus, less

for verbenas; collections about as usual; good bedding geraniums in 4-inch pots retailed at \$1.50 a dozen.

SALT LAKE CITY, UTAH.—Nearly double that of last year; prices lower on everything; collections slower; 4-inch geraniums retailed at \$1.50 a dozen. No call here for alternantheras, coleus, etc.—nights too cold for them.

TRENTON, N. J.—About same as last year; no change in prices; less demand for foliage plants; collections better; 4-inch geraniums retailed at 8 cents. We can not grow bedding plants alone at present prices to be profitable.

SPRINGFIELD, ILL.—About 25 per cent decrease; no change in prices; less call for verbenas, pansies and roses; collections about as usual; 4-inch geraniums retailed at \$1.50 a dozen; too many florists here to make the business profitable.

NEW HAVEN, CONN.—About the same as last year; prices a little lower; increased demand for scarlet geraniums, less call for coleus and chrysanthemums; collections slower; geraniums in 3-inch pots retailed at \$1.50 a dozen, 4-inch \$2.

SAVANNAH, GA.—Spring plant trade about 25 per cent larger than last year; no change in prices or collections; increased demand for bulbs and bulbous plants; 4-inch geraniums retailed at 25 cents each and \$2 to \$2.50 a dozen.

GERMANTOWN, PA.—About 20 per cent increase; no change in prices; geraniums sold better than last year, verbenas and other small plants not so well; collections rather slower; average retail price of 4-inch geraniums was \$1.25 per dozen.

DAVENPORT, IA.—About 10 per cent increase; prices lower owing to the sharp competition of one florist who wants the earth; more call for hardy herbaceous plants; collections slightly better; 4-inch geraniums retailed at \$1 to \$2 a dozen.

NASHUA, N. H.—An increase of about 10 per cent over last year; prices had a tendency to be lower; increased demand for hydrangeas and less call for coleus and Moon Flowers; collections slower; 4-inch geraniums retailed at \$1.50 a dozen.

GRAND RAPIDS, MICH.—Think total sales were larger than last year; no change in prices; increased demand for fine specimens of all sorts, particularly palms and dracaenas; less call for verbenas; 4-inch geraniums retailed at \$1 a dozen.

WATERLOO, N. Y.—About 15 per cent smaller than last year; prices about the same; increased demand for coleus, geraniums and heliotropes, less call for verbenas and pansies; collections slower; 4-inch geraniums retailed at from \$1.25 to \$1.75 a dozen.

PEORIA, ILL.—Some increase over last year; no change in prices; increased call for bedding plants for border; collections better (cash trade mostly); 4-inch geraniums retailed at \$1.50 to \$2 a dozen; trade shut down to nothing after May 30; cut flower trade very good.

RICHMOND, VA.—About the same as last year; no change in prices; increased demand for vines, less call for verbenas, ageratums and Mme. Salleroi geraniums; collections about as usual—possibly a trifle better; 4-inch geraniums retailed at \$1 to \$2 a dozen, averaging \$1.50.

BOSTON.—About an even thing with last year; prices slightly lower if any change; 4-inch geraniums retailed at from

85 cents to \$1.50 per dozen. There were too many plants grown for the demand, result auction sales and auction prices, forcing sales at a sacrifice.

MEMPHIS, TENN.—Some increase over last year; prices a little lower; an increased call for roses, geraniums and verbenas, less demand for coleus and general foliage bedding plants; collections are better; 4-inch geraniums retailed at \$1.50 to \$2 per dozen.

SING SING, N. Y.—About 8 per cent increase; no change in prices; collections better; increased demand for roses, verbenas and fuchsias, less for hybrid roses and hardy plants; 4-inch bedding geraniums retailed at \$8 and \$10 a hundred; auction sales in New York hurt us.

NORWICH, CONN.—About the same as last year; no change in prices; increased call for Hydrangea hortensis; collections somewhat slower; 4-inch geraniums retailed at \$1.50 per dozen. We should force more white shrubs and white stuff to fill out gap when azaleas are gone.

BUFFALO, N. Y.—Somewhat larger; no change in prices; an increased demand for large palms, etc., for vases, less call for verbenas; 4-inch bedding geraniums retailed at 15 cents each, \$1.50 a dozen. Nearly one half the plants sold in this city are used in veranda boxes and vases.

ALBANY, N. Y.—About 25 per cent larger than last year; prices about the same; collections about as usual; 4-inch geraniums retailed at \$8 per 100. Large plants of geraniums and roses are more profitable to grow; they sold more readily and brought more remunerative prices.

NEW ORLEANS, LA.—About the same as last year; prices a shade lower; increased demand for palms and ferns, less call for small plants; collections about as usual; 4-inch geraniums retailed at \$1.50 to \$2.50 a dozen; no market for verbenas. Cut flower trade shows an increase over former years.

NORTH CAMBRIDGE, MASS.—About 15 per cent smaller than last year; prices lower; collections slower; geraniums in 4-inch pots averaged 8 cents each at retail. Plant peddlers have increased in number, also plants sold very low at auction in Boston, which helped to injure trade.

ZANESVILLE, O.—One-third larger than last year; no change in prices; lessened demand for verbenas; collections about as usual; 4-inch geraniums retailed at \$1 a dozen. The cut flower trade shows a healthy growth; two of our leading florists have opened cut flower stores in the heart of the city.

AUGUSTA, GA.—About 10 per cent larger than last year; no change in prices or collections; geraniums in 3-inch pots retailed at \$1 a dozen. We find the demand for the better class of plants increasing and a decided advance in knowledge of floriculture among our best classes of citizens.

LA FAYETTE, IND.—Spring plant trade somewhat smaller than last year, about 15 per cent decrease; prices about the same; an increased call for hardy plants and less demand for Moon Flowers; collections are very fair, as good as usual; 4-inch geraniums retailed at 15 cents each, \$1.50 per dozen.

WILLIAMSPORT, PA.—About 10 per cent greater than last year; prices obtained were slightly lower on the average; collections about as usual; 4-inch geraniums

retailed at 10 cents each, \$1 to \$1.25 per dozen; we tried to get \$1.50 a dozen but market stock stopped that and we were glad to get \$1 to \$1.25.

COUNCIL BLUFFS, IA.—One-third larger than last season; no change in prices; an increased demand for geraniums and small roses, less call for verbenas, heliotropes and hibiscus; collections about as usual; 4-inch geraniums retailed at 25 cents each, \$2.50 a dozen. Cut flower trade has been better than last year.

DENVER, COLO.—About the same as last year, perhaps a small percentage of increase; prices about the same; a little better demand for first quality stock; collections about the same; 4-inch geraniums retailed at from \$1.80 to \$2.40 a dozen. Coleus and alternantheras don't do very well here—nights too cold.

PORTSMOUTH, N. H.—About 20 per cent less than last year; prices a shade lower; collections about as usual; geraniums in 4-inch pots retailed at \$1.50 a dozen. There was a general peddling of plants from door to door by out of town people with little fire heated houses and frames. Cut flower trade better than ever.

PATERSON, N. J.—Probably 20 per cent increase; prices somewhat lower; increased demand for all foliage plants, less for verbenas; collections about the same, possibly a little slower; 4-inch bedding geraniums 75 cents to \$1 a dozen. Competition is so keen that it results in cut rates and returns are less than usual.

EVANSVILLE, IND.—No increase, possibly a slight decrease; no change in prices; less demand for foliage bedding plants; collections about as usual; 4-inch geraniums retailed at \$1 to \$1.50 a dozen. The last winter was so mild with us that a great many people kept their plants over thus materially reducing the demand.

NEW BEDFORD, MASS.—A considerable increase; prices better; an increased demand for hardy roses, Ampelopsis Veitchii, less call for pansies, verbenas and tea roses; collections slower; 4-inch geraniums retailed at \$2 a dozen. Not as much call for baskets, vases and tubs as in years past, and more call for beds and shrubbery.

LOUISVILLE, KY.—About 10 per cent increase; no change in prices; increased demand for roses, geraniums and chrysanthemums, less call for coleus, centaureas, alternantheras and begonias; collections about as usual. 4-inch geraniums retailed at \$1 a dozen. The demand for fine fuchsias and roses was unusually good, also for plumbagos.

MT. VERNON, N. Y.—About 10 per cent increase; no change in prices; an increased demand for cobeas and other vines, also for cannas and chrysanthemums, less call for geraniums and coleus; collections a little better; 4-inch geraniums retailed at \$1 a dozen. There was an increased demand for palms, window boxes and large showy plants.

DES MOINES, IA.—About 25 per cent less than last year; prices same as last year; better demand for pansies and less for scented geraniums; collections are very slow; 4-inch geraniums retailed at \$2 a dozen. We think that the mild winter here had something to do with the decrease in sales, also scarcity of cash among the merchants.

TORONTO, ONT.—About the same as last year; no change in prices except for good geraniums, which brought rather

KENTIA FORSTERIANA.

better prices; *Anthemis coronaria* sold well, no demand for light coleus; collections about as usual; 4-inch geraniums retailed at 80 cents a dozen, 5-inch \$1, 5½-inch \$1.25 to \$1.50. Trade began much earlier than usual.

FAYETTEVILLE, N. C.—About 10 per cent decrease; no change in prices; increased demand for coleus and blooming hydrangeas, less for geraniums, owing to the fact that many people kept over their old plants because of mild winter; collections about as usual; 4-inch geraniums retailed at 20 cents each, 3-inch \$1 a dozen.

UTICA, N. Y.—About the same as last year; better prices for choice decorative plants; increased demand for palms and all kinds of decorative plants, less call for small stuff; collections much slower; 4-inch geraniums retailed at 10 cents to 15 cents each. Owing to the excessive rains and cold weather many beds were left unplanted.

PORTSMOUTH, VA.—About 25 per cent decrease from that of last year; lower prices on nearly all stuff; increased demand for geraniums and bedding plants, less call for roses and bulbs; collections slower; 3-inch geraniums retailed at \$1 a dozen. Cut flower trade has been extra good, but trade in both plants and flowers has been very dull since May 1.

HARTFORD, CONN.—About one-third larger than last year; prices about the

same; increased call for geraniums and less demand for coleus; collections about as usual; I sold 3-inch geraniums at \$1 a dozen, some sold in 4-inch pots at 50 cents a dozen. I have no trouble in selling good plants, and hope to get horsewhipped if I buy any more at auction.

DETROIT, MICH.—Probably an increase though much complaint on account of the cold, disagreeable weather; no change in prices; increased demand for palms, less call for verbenas and pansies; collections are good; 4-inch geraniums retailed at \$1 to \$1.25 a dozen; sales would have been much larger, but rain and cold in the very best part of the season did much harm.

KANSAS CITY, MO.—About 10 per cent increase; prices ruled about the same as last year; more call for bedding roses and carpet bedding plants; less demand for foliage plants; collections about as usual; 4-inch geraniums retailed at \$1.50 per dozen. Most of the geraniums are sold in 2½ and 3-inch pots at 50 to 75 cents a dozen, not many sold in 4-inch pots.

DAY CITY, MICH.—About 10 per cent increase over last year; no change in prices; increased demand for pansies, palms, geraniums, fuchsias and carpet bedding plants, less call for verbenas; collections somewhat slower; 4-inch geraniums retailed at 7 to 12½ cents. This

has been the most unfavorable season in 15 years. Most everything planted out before June was destroyed by cold.

ROCHESTER, N. Y.—About the same as last year, possibly averaged a small decrease; prices rather lower on some things; an increased demand for specimen hydrangeas and ornamental plants for piazzas; less call for pelargoniums, fuchsias and pansies; collections slower if any difference; 4-inch geraniums retailed at 10 to 12 cents—a few growers got 15 cents—\$1 a dozen.

MONTREAL, CAN.—About 15 per cent increase; little if any change in prices; the hydrangea is increasing in favor, but less demand for fuchsias; collections a little better than usual; 4-inch geraniums retailed at \$1.50 a dozen. Owing to the cool and dull weather this spring most of the florists have a large number of fuchsias left on hand, as they did not come into bloom in time for spring sales.

ST. PAUL.—Sales probably as large in quantity but prices were much lower, probably 25 to 30 per cent lower; an increased demand for perennials, less call for alternantheras and coleus; collections very slow—worse than usual; 4-inch geraniums \$1.50 to \$2 a dozen. Noticed a lessened demand for bedding and an increase for window boxes and vases and an improvement in plants used for same.

PROVIDENCE, R. I.—Decided increase; no change in prices; increased demand for good geraniums and annuals, less for foliage plants such as coleus, cannas etc.; collections about as usual; 4-inch geraniums retailed at \$1 to \$1.50 per dozen; Gloire de France is a very popular geranium, plants in 4 inch pots retailed readily at 50 cents each. We are short of wholesale rose growers and cut flowers generally in this state.

CINCINNATI.—Somewhat larger; bedding stuff sold at lower prices than last year, but good stuff brought better figures; an increased demand for roses and better class of plants, less call for coleus, geraniums, fuchsias, echeverias, etc.; collections very much slower; 4-inch geraniums retailed at from 60 cents to \$1 a dozen. The dry season in May with cold and bad weather in June had much to do with poor sales of bedding stuff.

BRIDGEPORT, CONN.—About 15 per cent increase; no change in prices; increased call for large palms, coleus, geraniums and hydrangeas, less demand for verbenas, centaureas, abutilons and pelargoniums; 4-inch geraniums retailed at \$1 a dozen, 10 cents each. There has been a good demand for large palms to set on lawns and piazzas, also good prices were obtained for large geraniums, fuchsias and other plants grown in large pots.

KALAMAZOO, MICH.—Sales about 25 per cent less than last year; prices a little lower on some plants; increased demand for verbenas, asters and alternantheras; collections about as usual; 4-inch geraniums retailed at \$1 to \$1.50 a dozen. There being more in the plant trade this spring we have not done as well individually, but I think there were more flower beds planted this year than ever before.

ST. JOSEPH, MO.—One florist reports plant sales as 10 per cent less and another as 20 per cent increase over last year; one reports prices about the same and another as lower; an increased demand for small bedding plants; one florist reports a lessened demand for geraniums; one

reports collections as about as usual and another as rather slower; geraniums in 4-inch pots retailed at \$1.50 a dozen. Owing to mild winter a great many plants were kept over by private parties which affected the trade at the start and some growers cut prices.

WATERTOWN, N. Y.—About 10 to 15 per cent decrease from last year; prices about the same with a downward tendency; less demand for verbenas; collections have been a little slow; 4-inch geraniums retailed at \$1.50 to \$2, good strong plants bringing the latter price. We think the price of plants will have to be lowered for another season. Our sales would have been as good as last year if we had had favorable weather. It was cold and very wet just at the time we usually do our planting.

BALTIMORE.—The supply was in excess of the demand with the exception of good roses; about 10 per cent decrease with the exception of plants suitable for vases; prices had a downward tendency with few exceptions; roses and vase plants met with ready sale, but pelargoniums and the general run of bedding plants went slower than in former years; collections slower, parties who have heretofore paid cash want time this season; 4 inch geraniums retailed mostly at 10 cents each, \$1 a dozen. Auction sales were hurtful to all, especially to those that had them.

CLEVELAND.—Some florists report an increase and others a decrease, probably an average would show that total sales were only about equal to last year; no change in prices; there was a good demand for viucas and verbenas, while there was less call for coleus and pansies; collections about as usual; bedding geraniums in 4-inch pots retailed at \$1 a dozen, though a very few brought \$1.20. The demand for window boxes and vases was excellent and *Dracæna indivisa* was especially called for in this work. Pink, salmon and crimson geraniums were in equal demand with scarlets for bedding.

SPRINGFIELD, MASS.—About the same as last year, possibly a slight increase on the average; prices generally were higher; there was an increased demand for palms and blooming hydrangeas, and a lessened demand for foliage plants such as coleus, centaureas, etc.; collections about as usual; 4 inch geraniums generally retailed at \$1.50 a dozen, though there were cases where they were sold as low as 75 cents a dozen. The florists demanded and obtained better prices for good stock; inferior stock sold low as usual. We find that well grown plants sell rather than poor at any price; the man who grows the best plants will get the trade.

NASHVILLE, TENN.—One florist reports an increase of 25 per cent and another a decrease of 20 per cent; one reports prices lower and another higher for roses and geraniums; one reports increased demand for roses and geraniums, and a decreased call for coleus, salvias, alterantheras and achyranthes; one reports collections as slower and the other as "better than usual to a remarkable degree;" one reports that 4-inch geraniums retailed at \$1.50 a dozen and the other \$2.50 a dozen; one adds: "During March and April our prospects were very encouraging for a good trade, but the drought set in here and lasted about six weeks which just killed trade for the season," while the other one says: "Plenty of rain, no overflow, heavy wind

nor hail to do any damage this year up to the present time." Certainly these two gentlemen have looked upon the field through glasses of different color.

PHILADELPHIA.—Some florists report a slight increase, others a decrease and still others as about equal to last year, probably the total sales are somewhat less than last year; prices averaged slightly lower on most bedding plants; there was notably a lessened demand for small carpet bedding plants; collections about as usual; 4-inch bedding geraniums retailed generally at 10 cents each, \$1 a dozen, though some were sold as low as \$6 a hundred, and others as high as \$1.25 a dozen. One florist reports that roses in pots sold as well as anything, and perhaps a little better than other stock. Some complain bitterly of unjust competition, stating that plants were advertised and sold at ruinously low prices.

CHICAGO.—There is much complaint in regard to the spring plant trade and it is probable that there was a decrease of about 25 per cent from that of last year, though some florists believe that their books will show a slight increase, giving as a reason that while there was not the usual rush, owing to the unfavorable weather, still sales were steadily made and the total sales will foot up all right; but the majority think that sales will fall nearly one-fourth short of last year. Prices generally were maintained at about

the same figures as last year; cuts were made in some cases, though these failed to move stock off any faster and might just as well have not been made. There was a comparative decrease in the call for coleus and similar foliage plants. Bedding geraniums, in 4 inch pots retailed at from \$1.50 to \$2.40 per dozen. The poor sales are almost universally ascribed to the cold, wet, unfavorable weather during the best part of the selling season.

YOUNGSTOWN, O.—Personally we cannot complain about our plant trade this spring. It has been good, but whether the plant trade generally in this section has been better than last year I very much doubt. For Decoration Day the demand for good plants at fair prices was excellent, but the demand for plants to set out at home is feeling the evil effects of florists raising a large number of small plants, and selling by auction and otherwise at ruinously low prices. In small cities it is being the means of making it impossible to get paying prices for anything like a good article. This method of disposing of what is called "surplus stock" has been practiced in the large eastern cities for years, and there its evil effects may not be so visible, although I believe even there the purchaser does not gain much, and I am sure the raiser loses. But in small places where everybody knows everybody it is doing considerable injury to the home retail plant trade.

ARECA LUTESCENS.

LATANIA BORBONICA.

Plants Best Adapted for Decorating.

Often the florist wishing to procure a moderate stock of decorative plants is at a loss to know just what will best suit his requirements; possibly this addition to his stock may be an experiment about being tried for the first time; his business may be growing, and with an increase of patronage he naturally wishes to bring it up to a higher standard by gradually incorporating into it all those different branches included in a first class retail establishment.

Even those who have had some experience in the plant decorating art often litter up their places with a lot of rubbish either through ignorance of what is best adapted for the purpose or through a false idea of economy. In my opinion it is not economy to buy plants that will not stand rough handling and are easily damaged or possibly killed by being used a few times; such I think will prove not cheap even at a low price.

In writing this short article I have thought to render some little assistance if possible, especially to any who may wish to add to their business (in a modest way perhaps) that very important and profitable branch, the decorating with plants of dwellings, public halls, etc. If he be of moderate means and is somewhat timid about making the venture I would say that a great deal can be done with a few good sized foliage plants, especially if some commoner stuff is used

to fill in with—small evergreen trees, laurel boughs, with some ordinary flowering plants will answer well.

To give the tropical effect so desirable in decorations, palms of course take the lead. No other class of plants can supply their place, and as there is a great difference in palms some being far superior to others for the purpose, only those best varieties most suitable are the ones to buy. Say a dozen palms are wanted, then I would recommend that the collection consist of just four varieties, viz.: 4 *Areca lutescens*, 2 *Kentias*—either *Belmoreana*, *Forsteriana* or *Australis* (they are very similar in every way); 2 *Phoenix reclinata* (cheaper than *rupicola* and quite as good for the purpose), and 4 *Latania borbonica*. Even if a larger number were required I would hardly feel inclined to recommend any addition to the assortment. These possess all the qualities needed—beauty, distinctiveness and hardiness, they are deservedly the most popular varieties, and as a consequence good plants can usually be procured at moderate prices and this is an important point to consider.

There are some other palms perhaps equally as good for the purpose, but are always scarce and consequently high in price. The varieties of *Rhapis*—*flabelliformis* and *humilis* can not be excelled for decorative purposes, but unfortunately are always scarce. It is generally very hard to procure good specimens and I

think absolutely impossible to buy more than a very limited quantity at any time. A few years ago quite a large number of *Seaforthia elegans* were used, now they are seldom asked for; the foliage is so easily injured that it can not be classed among the best palms for decorative purposes. For small work where plants one or two feet high can be used, *Cocos Weddelliana* has proven very valuable. None can surpass it in beauty, and if care is taken not to over water them, keeping them rather dry at the roots they will retain their health and beauty and stand considerable exposure.

In addition to the few varieties of palms I have named it will be well to have a small stock of other decorative foliage plants. *Ficus elastica* will give a good effect, and I think most florists are aware that it will stand as much abuse as almost any plant that grows. *Pandanus utilis* is another excellent plant and is always quite plentiful. *P. Veitchii* will make an elegant addition to the collection, but unfortunately is never plentiful; when it can be procured its beautiful variegated foliage gives a splendid effect. The *aspidistras* so well suited in every way are also somewhat scarce; they were never until recently appreciated as much as they should have been I think, or the stock would not have been allowed to get so low, however we all are trying hard to get up a stock and I hope in a short time a fair supply can be offered for sale. *Dracaena fragrans* is another very good plant for the purpose where rather low growing plants can be used.

I do not think it is necessary to make any addition to the list of plants I have already named; nothing is gained by too great an assortment. The best effect in decorations is gained by grouping together such as are most distinctive and contrast well with each other; for instance *Chamaerops excelsa* and *Latania borbonica* would not look well together, but substitute *Areca lutescens* for the *chamaerops* and an excellent effect is produced. One of the former can be dispensed with and any person familiar with the qualities of the two will certainly pronounce the *latania* the much more valuable palm.

Often the desire to have variety induces the florist to buy what will soon prove of no use whatever to him. This mania for variety has already sunk thousands of dollars for us, has spoiled our catalogues, and is now about to give no end of work to the Committee on Nomenclature. Sometimes it seems to me the florist endeavors to turn his store or conservatory into a sort of botanical garden by littering it up with a lot of useless stuff merely for the sake of having a variety of kinds. Usually the conservatory so stocked soon gets the appearance of a home for incurables or (a portion at least) a cemetery; the pots and labels remain to mark the spot where once grew a handsome plant, but unfortunately the plant had not the constitution to stand what was required of it; yet the florist keeps the pot and label hoping the plant is not quite dead and with care may recover. There is little chance of such recovering their health, it would be far better to throw them on the rubbish heap and restock, using better judgment next time in making a selection. Nothing looks worse than a lot of sickly half dead plants standing around, your customers are sure to notice them and perhaps their mental opinion of your ability as a decorator may not be very flattering to you.

CHAS. D. BALL,

Holmesburg, Philadelphia, Pa.

Seedling Palms.

The greatly increased use of palms for house decoration and also for filling conservatories, is being met by a corresponding increase in the number of seedling palms raised from year to year in the establishments of many of the leading florists. That this branch of the business may be overdone in the near future is an opinion freely expressed by some florists, but as the public knowledge of the great utility of these plants becomes more general, it may reasonably be expected that the demand for well grown plants will quite equal the supply for some years to come.

It is not, however, to the commercial side of palm growing that I propose to call attention, but rather to give some general remarks in regard to their culture.

The first requisite to success in the raising of seedling palms is good, fresh seed, and this, in the case of some species, is difficult to procure, on account of the long ocean voyage, during which the seeds invariably lose much of their vitality unless very carefully packed. It will be found that some species suffer much more than others from this cause. *Kentia Belmoreana*, for example, apparently, decays much more rapidly than *Kentia Forsteriana* when packed in precisely the same manner and sent at the same time.

The seed of that most useful palm, *Areca lutescens*, though easy to germinate, does not keep well, and consequently it should be sown as soon as possible after its arrival, and if it is fresh it will germinate in three or four weeks, and may be potted off at the end of three months.

Among the palms in general use probably the easiest and quickest to germinate is *Livistonia Chinensis* (or, as more generally known, *Latania Borbonica*). Seeds of this species under favorable conditions germinate in about two weeks after planting and are ready to pot off in two month's time.

Cocos Weddelliana is one of the easiest of its family to raise from seed, though not always making so good progress after the first potting, owing to the fact that the long, stiff tap root, which is made during the first growth of the seedling, is very brittle, and is, in consequence, frequently broken or otherwise injured in potting. This gives the young plant a severe check; and if accompanied with a slight excess of water such an injury often causes the death of the seedling.

The kentias are rather slower in germinating and sometimes take from six to eight months for the operation, and besides this it is seldom that more than 50 per cent of the seeds prove good. This fact, coupled with that of the comparatively slow growth of the young plants, undoubtedly has much to do with the high prices at which good plants of this species are sold.

The soil for palm seeds should be rather lighter in composition than that in which established plants are grown, and may consist of equal portions of peat and light loam, with sand enough to make the mixture open and easy to drain, the latter point being worthy of attention, for when the soil is allowed to become too wet many of the seeds are sure to rot.

The seeds may be planted in either pots, pans or wooden boxes, an objection to the latter being their liability to breed fungus, the earthenware vessels being therefore found the most satisfactory, and for convenience four to six inch pots are preferable. As a steady bottom heat is essential for the rapid germination of

PHOENIX RECLINATA.

palm seeds, the pots containing them should be placed in the propagating house or some similar structure and plunged in cocoa fibre or coal ashes, the cocoa fibre being the better conductor of heat of the two and also cleaner to handle.

Care should be given to watering, to keep the soil damp without making it sodden until the seedlings have developed their first leaves, after which water may be given much more freely without injury to the plants. As to the time for potting off, it will be found best with most species to wait until the second leaf begins to push up, but with some of the free growing sorts, such as *Areca lutescens* and *Livistonia Chinensis*, it is not necessary to prolong the time to this extent, and plants may be potted as soon as the first leaf is fully expanded; but they should in any case be kept in a warm house and shaded from the direct sunlight until they are well established. —W. H. Taplin, in *Garden and Forest*.

Basket and Vase Plants.

Trailing plants for vases and hanging baskets are indispensable to every florist, and whoever has a great many large vases and baskets to fill generally will find himself getting short after filling half or three quarters of them unless he grows very large quantities of such stuff.

I submit herewith a few suggestions and a list of the principal varieties I grow for my own trade, and these few hints may, I hope, help some one who may have found it rather difficult to grow enough good plants of this description in his limited space, and who if he ever had to buy such plants for immediate use found to his sorrow on their arrival that they were entirely too small to make any show at all.

Good plants of nearly all enumerated here can not be grown on benches set as close together as we would set any

upright growing plants, and therefore we reserve the front row next to the walks on every bench and bed in the greenhouses for them. There they have ample room for drooping down and will not get entangled as would be the case if set across a bench or bed in the ordinary style. Every plant has here a chance to spread, very few will get smothered by their neighbors and they are not much in the way. We endeavor to grow large plants rather than a multitude of small stuff and find it to give good satisfaction. Many a good florist may have a different opinion as to the holding over of some varieties for almost a year, but I am convinced that it pays better to plant six or eight good well grown vines into a vase, and thereby make it look full and finished, instead of using twice or three times that number of small young stuff and then after all not accomplish the same end. One or two good sized one year old plants make more show in a vase than a dozen small ones will ever do, even at the end of the season. No matter how well and artistically the main portion or center of a vase is filled and arranged, without a number of vines around the outer edge it looks unfinished and bare and therefore a variety of good sized trailing plants are indispensable; if we have none of suitable length and correspondingly branchy the result will be disappointment on both sides.

Vinca major var. heads the list with me; we only use one year old plants grown from cuttings the previous year and planted out in open ground, we consider the potting off of the cuttings waste of time and therefore leave them in the sand bed until planting time. In October all the soil is shaken from the plants and they are potted in 5-inch pots (the longest branches are either cut clean out or the ends cut off at a proper length) and wintered in a frame or in green-

PHOENIX RUPICOLA

house, but by the first week in March should go in a moderate heat and be repotted in fresh soil and 6-inch pots and be placed along the edge of beds and benches in single rows.

Scenio heterophylla or German Ivy, as it is generally called, is a very rampant growing vine, always healthy looking and is indispensable for baskets or vases. About March 1 we cut up a lot of vines and insert two single eye cuttings in a 3 or 3½-inch pot filled with good soil, and repeat the same again in April with a second lot, the first being used for the larger vases and the second batch will be strong enough for hanging baskets and smaller urns. They will root in these pots just as well as in the propagating bench and we save the trouble of potting off.

Convolvulus mauritanicus is a very valuable plant for the purpose, but the cuttings should be made the year before, some time in early summer and potted off into 2½ or 3 inch pots in which they may remain until the following February or March, when they will require a 3½ or 4-inch pot; it is a charming sight when the plants are covered with the light blue saucer-shaped flowers in spring and early summer; the plant will stand our hot and dry weather admirably and still look luxuriant all the year round.

Sedum carneum is another good thing for dry situations and we grow it in quantity, planting and rooting in the pots like the German ivy to save labor; February or March is time enough for this. I do not know for certain that *S.*

carneum is the right name for this plant, but at any rate it is a green sport from the variegated variety originated with me some years ago, and it grows so much better and stronger, producing great clusters of yellow flowers in May, June and July, that I discarded the variegated form entirely. The plants will droop over the pots from 12 to 18 inches and correspondingly branchy, while the variegated kind is generally much shorter.

Lobelias I place next and we grow two sizes of them. Seeds sown in November give us plants for large vases and are in 4 and 5-inch pots covered with bloom by May 1. A second sowing in January, however, is the main stock and these may be grown on a bench set the whole width across, for they will not droop so much over or entangle like other things, but in order to get good plants should be allowed ample space as soon as they show signs of beginning to run.

Ficus repens is seldom grown for this purpose, but I have found one year old plants among the most useful; we grow a lot of cuttings in early summer and keep them in 2½-inch pots until February, when they are shifted to a 3½ or 4-inch. They make nice well furnished plants by a little pinching and ordinary care, fill out a big space in a vase and will stand rough winds and dry weather exceedingly well.

Ampelopsis Veitchii is another plant that not everybody would use in a vase, but in order to have good spreading plants we also have to grow them for about a year and then it is in proper con-

dition to use even in the largest size vases. The little plants after rooting may be planted out for a season and trimmed back short at potting time in the fall, or they may be grown in 3 inch pots until February or March when they require repotting and a good heat to start them into growth.

Mesembryanthemum mutabile and *M. blandum* both we find very desirable for urns, vases or baskets of every description, and they do well in the most exposed and driest situations, but do equally well in any place, charming as they are in bloom all summer. We root the cuttings for the larger plants in October or November and in February for the smaller sizes.

Alopecurus aureus marginatus is a good rampant growing grass-like plant, with rather broad and short blunt blades, producing long short-jointed drooping or running stems, thickly set at every joint with a whirl of beautifully variegated leaflets half inch wide and from two to five inches long. These stems often attain a length of three feet and over in a few months. Propagation is easy, for by cutting the stems into pieces every joint will make a plant in a few months. It will stand more rough winds and dry weather than any long drooping vine I know of and looks well at all seasons.

Glechoma hederacea var. is a first class creeping vine, grows as freely as the well known green variety, forming a compact sheet of white and green, so densely grow the stems and leaves interweaving each other into one mass, drooping over the edge of basket or vase and by its silvery variegation is seen from far off distinctly.

Tradescantias are not to be despised for partially or wholly shaded positions, while in the open sun they do not succeed very well. We only grow the variegated types and take particular pains to select the very best colored cuttings, rejecting all those that show too much green, as they are very apt to sport back to the original green parent.

Ampelopsis sempervirens is in many respects preferable to *A. Veitchii* as a basket or vase plant, as it makes stiffer growth and the dark, glossy foliage is retained all the year around, but it is rather scarce and not many florists would use it in vases on that account. The cuttings of this should also be rooted the summer before or else the plants would be too small.

Linaria cymbalaria (Kennilworth Ivy) we grow to some extent, but we must not set them too near together while growing fast, or else they will run into each other and get entangled. When once established in a pot it will take care of itself and grow in every direction creeping over everything and hanging over the rim so far that we frequently have to shorten them before using. In a vase it has such a graceful habit to form tracery with its hair-like branchlets set with roundish scalloped leaves over and among the coarser growing vines that I would hesitate to do without it, although we generally have to spend more care on this vine than any other if we want large sized plants, owing to their everlastingly running into each other.

Saxifraga sarmentosa we use frequently, but plants have to be large and show plenty of runners to look well, if divided in January or February good sized plants will be obtained in time for filling vases.

Maherua odorata makes an excellent plant for the purpose if left to grow without tying, the finely cut foliage contrasts well with the more solid leaves of other

plants, and besides this the golden bell-shaped flowers are very fragrant and admired by everybody. These plants also should be about one year old before we use them.

Of *Othonna crassifolia* we grow two sizes in 3 and 3½-inch pots, the smaller ones for hanging baskets, the others for vases in rather exposed positions; the larger plants have also the habit of running into each other and we generally set them alternately with other plants like *ampelopsis* or grasses etc along the edge of benches.

Maurandia we use freely wherever we can. Make cuttings or sow seed in November and after potting off keep pinched in until about April 1 and the result is many streamers from a compact bushy base.

Ivy *Geraniums* of every description I should mention here; they are used largely by every one, and we do it too, but in reality they are not the right thing for the purpose and as long as we have enough of other vines we seldom plant any in vases, they are too liable to lose their foliage if left dry in hot weather, though their blooming quality should be considered in favor of them.

Besides these plants we grow a number of others, such as double and single *tropaeolums*, *alyssum*, *Isolepis gracilis*, *Festuca glauca*, *Fragaria indica* and others, mostly in 3 inch pots to fill out a small gap in a vase and to make it look full when filled—for my customers at least want their vases to look well filled and do not want to wait for them to grow full. We can not do this with small plants as cheaply as when we have a few good large vines for every one, but after all some florists may think growing such stuff for almost a year would not pay, perhaps a trial with a limited quantity would convince them to the contrary.

Rochester, N. Y. JOHN B. KELLER.

Notes From Washington.

BY WM. FALCONER.

I GOT INTO Washington Saturday, June 29, and found the trees and shrubs and lawns and flowers as bright and gay as could be. The whole city is a vast garden, or rather a series of gardens.

THIS SEASON, so far, has been the wettest the gardeners remember, and on this account together with the very stiff clayey soil that prevails there, spring planting was much delayed.

THE PEOPLE of Washington are strict Sabbatharians; one wouldn't go there on Sunday except to church.

BUT I HAD the good fortune to first call upon my old time friend Mr. W. R. Smith, the curator of the Government Botanical Gardens and one of the Park-ing Commissioners of the city of Washington. His kindness, hospitality and attention to me were extreme, and to him I am indebted for my most enjoyable visit to the capital.

MR. SMITH has been in charge of the Botanical Gardens for the last thirty-six years. He is known to most every florist in the land, and his genial face must be familiar to every one who has visited the florists' conventions. He is regarded as having the best all-round knowledge of horticulture and plants of any man in the country. And he is an earnest student.

THE BOTANICAL GARDENS are alongside of the Capitol grounds and occupy the lowest ground in the city. The land is level and a square block. The soil is a stiff clay. There are extensive ranges of greenhouses, some very large and

roomy, and others of lesser altitude for small plants and propagating.

AT THE SAME time that the recent flood devastated the Conemaugh valley all this part of Washington was submerged, not so much by rain water as by dammed back sewerage. The green-houses stood three to four feet deep in this poisonous sea, and the pot plants upon the benches floated about in the flood. And on the ground floor of Mr. Smith's residence the water stood 29 inches deep. The results of this disastrous overtaking is now evident in death or serious injury among many of the plants and a sorrowful superintendent. Of agaves alone he has lost 18 species.

THE ROCKERIES.—Beside the office and greenhouses extensive rockeries have recently been built. These are not meant as an artistic feature but as a home for plants. A vast number of species of little plants find a place in a botanic garden that are not generally cultivated, and to afford to these the best cultural conditions, a position where they can be kept together dry at the top and thoroughly drained underneath, and where they are always under the eye of the gardener, is the purpose of the rockery. The stones are set deep in the ground with a liberal supply of rotted leaf soil under and about them so as to encourage the roots of the plants to creep around and under the rocks and in this way find food and moisture and keep cool in warm summer weather. Being elevated above the ground and so well drained there is far less danger in winter to plants

that are grown in rockeries than to those in the level open borders.

STEPPING-STONE PATHWAYS wind through the rockeries to admit of easily reaching any part of them, and they nestle among evergreen mats of alpine pinks, dwarf phloxes, ajuga, crimson-leaved oxalis, sibthorpea, marsh pennywort, golden moreywort (*Lysimachia*), *colissenii* ivy (*Linaria*), creeping veron-icas, different kinds of sedums as *S. acre*, *album*, *Hispanicum*, *Sieboldii*, and the like; variegated ground ivy (*Nepeta gle-choma*), *Lespedeza striata* and similar little spreading plants. *Fragaria indica*, used in this way, was also very pretty, deceptive rather, for it is studded all over with tempting luscious like red strawberries, but, alas, they are not edible.

LITTLE PONDS of water in the rockeries serve as homes for the smaller aquatics. And there are certain rockeries devoted to certain botanical races of plants. Two very interesting patches are filled with sensitive and insectivorous plants. Among the sensitive plants were *Oxalis sensitiva*, *Mimosa sensitiva*, *M. pudica*, and the telegraph plant, *Desmodium gyrans*. The insect eating plants included our many species of northern and southern *sarracenas*, also *dionæas* and *pinguiculas*. And in a greenhouse alongside of these is a large collection of sundews (*Drosera*) which are also reckoned among insectivorous plants.

ARISTOLOCHIA ELEGANS is a beautiful tropical species brought into notice a few years ago by having grown and bloomed and seeded so freely in Dr. Richardson's

PANDANUS VEITCHII

PANDANUS UTILIS.

gardens in New Orleans. Mr. S. raised lots of it from seed and has it in quantity planted out about his rockwork and garden.

ARISTOLOCHIA CILIOSA is a small variegated-leaved species from Brazil. It filled some of the pockets in the rockery and was in bloom. Its flowers are purple yellow and deeply fringed.

A VERY distinctly white variegated rib grass (*Plantanus lanceolata*) was seen in a corner. But its mother is a bad weed.

CROZY'S GLADIOLUS FLOWERED CANAS were in favor, and large clumps in brilliant bloom in the borders and flower beds.

BEGONIA EVANSIANA is perfectly hardy and comes up abundantly in the rockeries.

BAMBUSA FORTUNEI VARIEGATA is also hardy and a thrifty grower one to two feet high when it gets good, moist ground and a little shade. It is also hardy as far north as Boston.

OPUNTIA VULGARIS, Rafinesquii and its varieties, also Missouriensis and its forms enjoy themselves upon the rockeries. But I was surprised to find that *Opuntia arborescens* was also hardy here.

THE CORAL-TREE (*Erythrina cristagalli*) had been wintered within a cold frame and at the back. The sashes are now uncovered and the plants are huge bushes with long, massive, terminal racemes of deep red flowers.

THE WHITE BLADDER FLOWER (*Physianthus albens*) was grown in a greenhouse, but a hole was made in the glass

and the vine turned outside. It enjoys the open air in summer and is now a mass of white flowers.

STIGMAPHYLUM CILIATUM is a yellow-flowering Brazilian vine that has long been in cultivation. Mr. Smith has it planted out on a little fence, and he assures me it grows and blooms beautifully in this way in summer. At the White House I found it used as a greenhouse creeper.

THE FINEST collection of Pitcher plants in Washington is at the Botanical Gardens and they are splendidly pitchered and highly colored specimens. This is greatly due to Mr. Oliver, the gardener in charge who is passionately fond of this class of plants.

MR. SMITH insists that the current idea that the insects enter the pitchers and get drowned in the water is erroneous. They enter the pitchers and partake of the liquor generated in these vessels and thereby become stupefied or intoxicated and die; or, to use a vulgar phrase, they drink and die drunk. But as soon as this liquor becomes diluted with ordinary water its fatal purpose lessens, and he has found insects enter and again leave the pitchers with seeming impunity. In their natural state most all pitcher plants, whether *sarracenia*, *darlingtonia* or *nepenthes* have their pitcher-mouths so guarded as to shed the water. There are a few exceptions to this rule, our common *Sarracenia purpurea* is one; rain water may enter it. Furthermore, he finds that certain species of pitcher plants are

attacked by insects peculiar to themselves.

MR. SMITH is opposed to side ventilation for tropical plants; indeed he does not like door draughts even in summer. He cited his *nepenthes* house, which is a roomy curvilinear structure, as an example. He used to have a door at either end of this greenhouse, also side ventilators for use when needed. But he assures me it was not till he shut up the side ventilators permanently and closed up both end doors and opened one in the front of the house instead, that he was enabled to get the wealth of magnificent pitchers that now so richly drape the soaking, mossy baskets that hang from the roof of the house. And I observe that the large rose growers in their new greenhouses make ample provision for top ventilation, but none whatever for ventilating from the sides.

OF PALMS, Mr. Smith is said to have the most complete collection in the country. Some of his specimens are immense, spreading from side to side of the big greenhouse and pushing their young leaves clear through the glass roof. He considers the following a good set for general cultivation: *Thrinax elegans*, *T. argentea*, *T. parviflora*, *Kentia australis*, *K. Belmoreana*, *K. Forsteriana*, *K. Canterburyana*, *Sabal umbraculifera* (the Blackburn fan palm), *Areca Baueri*, *A. sapida*, *A. lutescens*, *Phoenix reclinata*, *Cocos australis*, *C. Weddelliana* and *Lantania Borbonica*. He regards *Areca lutescens* as a feather palm an excellent companion to *Lantania Borbonica* as a fan palm, and both of these everybody's palms.

HYMENOCALLIS CALATHINUM was in good bloom out of doors. This is a Brazilian bulbous plant of the greatest merit; it has large, white, fragrant flowers. We lift the bulbs in fall, keep them dry and away from frost over winter and plant them out in early summer. I may here remark that any one having a lot of these bulbs that have been well ripened and rested can force them for Easter or any other occasion they please with very little trouble and a certainty of getting bloom inside of six weeks after introducing them to moderate warmth; and they can be hurried on in four weeks.

OF YUCCAS there was a fine display most everywhere. *Y. angustifolia*, the poorest one, was past; *Y. filameutosa* and its varieties were at their best or on the wane, and *Y. gloriosa* and its variety *recurvifolia* were in their prime. Now, all of these yuccas are good plants to handle. They germinate readily from seed, grow easily, last forever and bloom with precision every summer. The blossoms, although showy and produced in quantity, are of little use as cut flowers, but landscape gardeners use large numbers of the plants. *Y. gloriosa* is not hardy in New York, but the others are.

IN CACTUSES and other succulents the Botanical Gardens are rich. The plants are grown in pots and plunged out of doors in summer. This is the best way to treat them. If the plants are weak or spotted or damaged plant them out rather than plunge them, but lift and pot them in August, so as to get them well rooted before winter sets in, and have them conveniently at hand to cover over to ward off rain and mist, both of which are productive of spot.

FOR GENERAL cultivation—to winter over in the house and plant out in summer Mr. S. recommends the following: *Opuntia nigricans*, *O. glaucophylla*, *Cereus triangularis*, *Echinopsis Decaisneana*, *E. Byrnesii*, *E. multiplex*, *Echino-*

cactus visnaga, *E. pectiniferus*, *E. longihamata*, *Mammillaria pectinata*, *M. bicolor* and *M. floribunda*.

THE SOUTH-SIDE IVY is a new name Mr. Smith has given to *Ampelopsis tricuspidata* (Veitchii); and he has also applied the name of North-side Ivy to the European ivies (*Hedera*). This is because the *ampelopsis* flourishes so bravely on the south or sunny side of buildings; and the European ivies are only satisfactory when grown on the north or shady sides. By these simple names the people at once understand the proper place and use for each ivy.

AMPELOPSIS ROYLEI is after the same fashion as *A. tricuspidata*, but of bolder habit and has larger and more leathery leaves. Mr. S. has a very good word for it, so has John Saul, and both grow lots of it. It seeds freely and they raise it from seed as well as from cuttings.

HORSE-MINT (*Monarda*) in variety, some with bright red blooms and others with purple and white flowers formed the largest masses of color in the grounds. Pretty and good perennials but not adapted for florists' work.

TWO AGAVES were in bloom here and one at Arlington, but none of them were showy. And in passing through New York I found a larger species at Peter Henderson's door with a rising stem a dozen feet high.

Arlington, General Lee's Old Home.

Is situated on an eminence a few miles from Washington and commands a splendid view of the capital. It is now owned by the U. S. government and used as a military cemetery. The mansion house is preserved in its former beauty and completeness, but a great deal of alterations have been effected in the grounds to render them fitted for the use to which they are now devoted. The place is freely open to the public.

Mr. Rhodes, the superintending gardener, treated us with much courtesy.

A very large greenhouse with outside hot water heated frames was erected last year for the propagation and accommodation of bedding plants and the storing of palms, yuccas, agaves and other bulky subjects used out of doors in summer.

The old greenhouse has been removed and the ground there and beyond it for some distance graded and sodded and a new flower garden laid out and planted with bedding plants. In the beds a good deal of lettering with *echeverias* has been done.

Sibthorpia europæa is used here as elsewhere very freely as a green carpeting or groundwork in flower beds, and I am informed that when used in this way it is very satisfactory, growing and spreading well, forming a close carpet and not likely to rot off in summer. Who has now got the variegated variety of it? Some years ago it was common enough about Cincinnati, but in answer to recent enquiries I can find no trace of it there now.

Rockery-like beds in shady places and made up of a pile of old tree root stumps and furnished with palms, cycads, agaves and the like in pots and set among the stumps are very pleasingly arranged. The earth in the pots, together with the pots themselves, also the root stumps are covered over with thin sods of wood moss, which by being kept moist has assumed a perfectly natural appearance and looks as if it had been growing there for several years instead of a few weeks as is the case.

Saxifraga sarmentosa has naturalized itself about the base of these rooteries and is hardy.

The common Water Penny-Wort (*Hydrocotyle*) has also established itself in the moss around the rooteries and is spreading up among the moss about the pots. This is a particularly pleasing feature and gives the whole a very natural appearance.

Tecoma radicans abounds by the way-side, where it scrambles over bushes and banks and climbs up into the trees from whose branches its trumpet laden arms now depend in gay estate. Its variety *sanguinea* is trained against one of the Arlington out buildings, and an exceptionally fine form which Mr. Smith regards as a probable hybrid between *T. radicans* and *T. grandiflora* was conspicuous for its floral beauty.

The true *Tecoma grandiflora* of China and Japan was also in bloom against one of the walls of a building. What a

ASPIDISTRA.

splendid vine it is with its massive panicles of large and showy red flowers. But it is not reliably hardy much north of New York.

The English Ivy (*Hedera*), here, as elsewhere, was made good use of; it is employed to run over banks and stones and clothe the stems of trees. Mr. Rhodes remarked that after this rather than root out the stumps of broken trees he would head them off and cover them with ivy. Several old tree trunks are covered in this way.

W. F.

George Washington's Old Home.

Mount Vernon, in Virginia, is situated on the right bank of the Potomac, sixteen miles south of the city of Washington. In Washington's time the estate comprised about 8,000 acres. The mansion house is a beautiful, spacious and homey two story building and about it are the many out-buildings and servants' quarters, just as they were in the time of the "Father of his Country." Here also is Washington's tomb.

On every side we find Washington's taste for landscape gardening and horticulture. Broad landscapes and long vistas occur here and there, and wide lawns are spread before the fronts of the mansion. Trees were selected and planted with a definite and well considered purpose, and there are many magnificent old specimens of oak, ash, linden, elm, tulip and other trees and the largest sassafras tree I have ever seen; indeed so fine was this specimen, that Mr. Smith, of Washington, who was with me, had it photographed at once.

The flower garden is preserved in its old style. It is an inclosed space, surrounded and intersected with gravel walks edged with box, and a scroll pattern of beds also edged or defined with box. But the box, although clipped a little every year, has in a hundred years attained quite massive proportions.

One of the sources of income for the maintenance of the place is derived from the sale of plants and flowers, and a professional florist is employed for this purpose. Little plants, hardy and tender, are gotten up in small pots and sold to visitors who buy them as a souvenir of their visit to Mount Vernon.

But what surprised me in this plant business was the scraps of coleus, geraniums and the like that were displayed for sale. The varieties now grown of these did not exist at all in Washington's lifetime. Visitors seeking souvenirs, no doubt would prefer something indigenous to the estate, for instance oaks, tulip trees, magnolias, maples, lindens, trumpet vine, or something in the way of a part of the plants that he had planted, for example young boxwood plants from the scroll edgings of the flower garden, something they could bring home with them and which would last a lifetime.

The Mary Washington Rose: According to the guide book this is a delicate tea-scented rose, a seedling raised by General Washington and named for his mother. "Large numbers of it are yearly raised and readily sold."

Many evidences around the old home show that General Washington was a devoted horticulturist and a tasteful landscape artist. And I find that his library contained Mawe's Gardener, Langley on Gardening, Miller's Gardener's Dictionary, Miller's Gardener's Calendar, Kennedy on Gardening, and the Hothouse Gardener, together with other works on rural adornment and many books on agriculture.

W. F.

The Department of Public Parks.

The greenhouse establishment of the department of public parks and gardens is a village of glass not far from the Washington Monument. Mr. George Brown is the superintending gardener, not only of the greenhouses but also of the parks and squares.

As might be expected a large portion of these greenhouses are devoted to the propagating and raising of bedding plants, of which great quantities are used, and are now comparatively empty. Chrysanthemums by the thousand are now being potted; they are to take the place of the ordinary summer bedding plants when these are removed in fall, for the chrysanthemums have ample time to bloom before the severity of winter cuts them off.

There are also extensive ranges of greenhouses for the cultivation of palms, dracænas, ficuses, anthuriums, cycads, aralias, ferns and other decorative plants, not for use in outdoor garden display, but for decorating the White House and other state departments. Cut flowers in quantity are also grown for the same end.

Mr. Brown propagates all of his large dracænas as *fragrans*, *ensifolia*, and *Goldiana* in small bottles of water plunged into a tan hotbed in a glass case in the propagating house. He claims that in this way they root very freely and in transferring them to pots of soil he has no trouble. And he can strike large pieces, and in this way get useful plants up quickly.

The common variegated-leaved *althæa* is much esteemed as a fine-foliage pot

NEW FRENCH CANNAS

plant in winter. The shrubs are planted out in nursery rows in summer, and lifted and potted in fall early enough so as not to cause them to drop any of their leaves. Then keep them moist and cool, but do not allow frost to reach them else it will defoliate them.

The variegated-leaved *Dracena fragrans*, usually known as *D. Lindenii*, is greatly appreciated as a "furnishing" plant, as it remains in good condition for a long time when used for house decoration. But the plain green *D. fragrans* itself cannot be excelled in this way.

Dracena Kneckeii, also a bold green-leaved sort, is much grown for "furnishing" purposes, and the florists here speak of it with much favor, indeed, Mr. Brown regards it as being the best of all.

W. F.

New York Notes and Comments.

The "Devil's Tree" mentioned by Mr. Falconer on page 541 is very impressive, but it must take a back seat when compared with the *Crinoida Dajecana* or man-eating tree of Madagascar, which will casually devour a botanist or a crocodile with equal ease. The story of this tree appeared in the *New York World* a

great many years ago; it was reprinted in *Current Literature* of last July. The *Crinoida* may be considered a slight exaggeration of Mr. W. R. Smith's carnivorous *nepenthes*, which, already addicted to a diet of bull frogs, may in the future entertain sinister designs on the genial botanist himself.

Probably the most interesting feature now on view at Peter Henderson's nurseries is the collection of new French cannas. Previously almost the only canna we had worth growing for flowers as well as foliage was *Elhemannii*, but these new varieties supply our wants in this direction. They can only be compared with the *gladiolus*, and they have one advantage which all the *gladioli* lack, and that is handsome foliage. They are all dwarf in habit; from two feet to thirty inches would, I imagine, be a fair average. The greater proportion of the foliage is green, though there are some handsome bronzes among them. They were planted about the first of June; on the 5th of July they were freely in bloom and giving vigorous promise of a floriferous summer. There are about forty varieties to be seen, among them a number of handsome seedlings raised at

Henderson's, but the larger proportion was imported from France.

The flowers are, as a rule, iris-like in shape, large and borne in thick spikes. *Admiral Courbet* is clear golden yellow, thickly apsplashed with crimson. *G. Cous-ton* shows similar colors, but larger showier flowers and broader petals, while the splashes are flame color rather than crimson. *Mme.* Just is orange, shading into flame. *Cardioux* is rich vermilion with bronze foliage. *Madame de Liabaud* scarlet. *Edward Andre* bright crimson. *Ulrich Brunner* glowing vermilion, with broad petals and handsome spikes. If they were not all so beautiful one might be tempted to call this the finest of the lot. *Rival Mascot*, scarlet, with a bit of orange in the throat. *Antoine Crozy*, scarlet, petals very broad. The parti-colored varieties are very suggestive of an orchid; the flecks and spots are like those of an *odontoglot*. The value of these plants is apparent at first glance; they will form a very attractive feature in fine bedding out. Many of the red ones suggest *Elhemannii* in color and shape of bloom, but the spikes are always erect, not drooping.

At the same place a lot of very fine *Magna Chartas* were put outside in 10 inch pots; by using only these large, well developed plants in perfect condition flowers of large size are expected. A lot of these roses were planted in boxes, about six in each, according to the system pursued by Julius Roehrs; they are far more easily handled than pots, and give increased economy in labor. Among other roses a house of *Beauties* was especially good, giving fine promise for next winter. A lot of *Souvenir de Wootton* showed that this newcomer is to be tried thoroughly next winter.

A handy way of growing chrysanthemums was noted, they were planted in boxes and stood outside. This entirely does away with the nuisance of digging up and replanting in the fall; the boxes are lifted in as needed. The varieties grown for cut flowers were simply red, yellow and white. None of the queer, off shades are grown for this purpose, experience every where showing that flower buyers don't care for them. Mrs. Wheeler, Mrs. Jessie Barr and *Gloriosum* are three of the most popular, and consequently most salable. There is no doubt that Mrs. Pottler will be thoroughly salable as soon as it is grown in quantity, for its exquisite *La France* pink is just the color women want, and the flower is large and shapely too.

Each year experience proves that the regular staples for the bedding trade are roses, geraniums, colons and the like; outside little known stuff is not cared for. Hardly herbaceous is hardly salable at all. The use of sub-tropical plants increases among those who have a house where stuff can be carried over for the winter, but the largest part of the nursery trade comes from people who can't do this.

Florists in New York complain that their bedding trade is dropping off, because people now leave town too early in the season that it is not worth while to do anything in this line, so vases and window boxes are neglected.

Trade is at present very dull, fortunately there are few flowers in the market. There are literally no roses; if a florist wants to fill a basket with anything good he has to use orchids. Some nice water lilies are in, among them the pink Cape Cod lily.

Jules Lachlaume, of the Havana Garden of Acclimatization, is making his annual stay in N. Y. EMILY LOUISE TAPLIN.

THE SPRING PLANT TRADE.

The reports from all sections which appear in this issue are well worthy of a careful study by all in the trade.

For several years past our reports have shown a decided annual increase in the spring sales of plants, but this year's reports not only fail to show an increase but indicate a decrease in the total sales from those of last season.

For this a number of reasons may be advanced. The remarkably mild winter undoubtedly had its effect, not only in that many plants were successfully carried over which usually have to be replaced annually, but in that trade in general was curtailed and money was not as plentiful with those who constitute a large proportion of the buyers of ornamental plants. And finally the very unfavorable weather during the best part of the selling season discouraged from planting many who were not affected by the reasons previously named, for when the weather had at last become settled it was time for the annual flight to the summer resorts. Had it not been for the unfortunate weather during the selling season sales would in all probability have been equal to last season, but still have been short of the usual annual increase.

We are pleased to note that the latest reviews of trade by the Commercial Agencies report improved prospects for business and that an active fall season is anticipated. Crop prospects are good and other indications are at present favorable.

But it will undoubtedly be wise to be conservative in building this summer. Better put what you have into best condition rather than increase your glass surface. And certainly do not build unless you have the money in hand to pay cash as you go. Do not assume heavy obligations to be met only by the sale of the product of the new houses.

Another fact to be noted is the large number reporting a lessened demand for coleus and similar foliage plants. Last year quite a number reported an increased call for plants of this kind and the present lessened demand would indicate that their popularity may be somewhat on the wane; though their failure to sell this spring may have been due to the cold weather which would naturally militate very strongly against the sale of such a tender plant as the coleus.

COST OF PRODUCTION.

In *Garden and Forest* for June 26, appears an article entitled "Peter Henderson's Plant Factory," which contains the following paragraph:

"It looks like slaughter," said Mr. Henderson, "to sell plants at a dollar a hundred, but it is a fact that the actual cost to us of producing these plants is often no more than thirty cents a hundred. Here are the figures: Four men will take

off, make and put in the bench 10,000 cuttings a day; two men and a boy, or say three men, will pot the same when rooted in another day; three men in a day will knock the plants out of the pots and pack them in boxes. That is, ten days' work has been all that was needed to get 10,000 plants ready for market. If we call this labor worth \$15, we can add \$15 more as a good allowance to be charged against the plants for firing and delivery, so that \$30 is a liberal estimate for the cost of the 10,000 plants. The same could be proved of some plants raised from seed—such as asters, balsams, Drummond's phlox, etc., so that even with expensive structures, on land where every building lot of 100 x 25 feet is worth \$1,000, there is no actual loss on certain plants even at the low price mentioned when they are sold in sufficient quantities."

We do not know whether Mr. Henderson has taken account of the cost of care while growing, interest, taxes, wear and tear etc., but presume this is included in his estimate; and if this is so, then the cost of producing bedding plants has been brought down to a much lower figure than we had believed possible.

Can any other grower produce bedding plants as cheaply?

PLANTS FOR DECORATING.—In this issue appears a very liberally illustrated article on "Plants best adapted for decorating," which we consider of great value to the trade at this time. The constantly increasing demand for plant decorations must be met, but many florists who realize this have been in doubt as to the kinds most available and above all the most profitable for the purpose. To such we would say that no better selection can be made than that indicated by Mr. Ball and that we heartily agree with him as to the wisdom of avoiding too great an assortment. Our illustrations are from photographs of plants of the sizes which can be obtained in quantity at moderate prices—the palms from 2½ to 3½ feet in height.

EXPRESS RATES.—Up to time of going to press the Traffic Committee of the Express Companies had not taken final action in regard to modifying the classification card which went into effect June 15. As abundance of time has elapsed for each member of the committee to have signified his approval or disapproval of the modifying rule it is probable that some member has made objection. If such is the case it may be several weeks before the matter is finally adjusted. It is believed by the officials we have seen that if any objection has been made it is merely to the phraseology and not to the intent of the modifying rule.

THE BUFFALO CONVENTION.—The time is rapidly approaching when the Society of American Florists will again meet in annual convention, and there is every reason to believe that the fifth annual meeting will show the usual increase in attendance over preceding conventions. A most excellent programme has been prepared, the convention hall is admirably adapted to the purpose, the exhibition hall is under the same roof, hotel accommodations are ample and cheap, a rate of a fare and one third for the round trip on the certificate plan has been secured, and the beautiful city of Buffalo offers open handed hospitality.

HAVE YOU done anything toward assisting the Committee on Nomenclature in their work? If you know of any plant which is known by more than one name you are not doing your duty to the trade at large if you do not at once report it to the committee. Your hearty co-operation is necessary to accomplish effective work. Don't let it be said that you failed to do all in your power to assist the committee in its work.

THE WOOTTON ROSE.—Regarding Mr. Bennett's statement that his Woottons were affected with black spot, Mr. John Cook, of Baltimore, the originator of the rose, writes that Mr. Bennett's is the only complaint received and sends a lot of letters from various florists who say that the rose is free from spot with them. And from information received from other sources we are inclined to the belief that the Wootton is fully as free from the ravages of black spot as any of the hybrid tea class.

OUR CONVENTION SUPPLEMENT will be published with the issue of August 15, and the map and directions it will contain will, we believe, be of considerable value to those attending the meeting at Buffalo. Exhibitors wishing to call special attention to their exhibits will find the supplement a very effective medium.

TUBEROUS BEGONIAS.—Messrs. F. J. Meech & Son, Charlevoix, Mich., send us blooms of eight varieties of tuberous begonias which are of great size and most beautiful colors. There is certainly a great future before this race of begonias.

Arrangements for the Coming Convention.

The local committee has secured rates as follows from Buffalo Hotels:

The White House Gardens.

A spacious conservatory is attached to the mansion and entered by two doors from the state apartments, and used as a promenade for guests during entertainments. Inside, the arrangement consists of side benches all around, wide, straight pathways, and middle step and stair stages. The plants are grown in pots and consist of ordinary decorative fine foliage stock, as dracenas, aralias, crotons, anthuriums, ficuses, and the like. Suspended from the roof over the pathways are baskets filled with ferns and pitcher plants. The whole house has more the appearance of a nurseryman's plant house than a conservatory. The building itself is ample—wide, high and long, and affords every facility for a first-class natural arrangement. Why, therefore this miserable get up—these straight pathways, rigid benches; and this crockery warehouse? Of all places in the country where one would expect to find

an appropriately furnished conservatory it is in the one attached to the Executive Mansion of the President of the United States of America.

Regarding the natural style of arranging plants in conservatories, Mr. William Robinson, the most tasteful horticulturist living and the most eminent horticultural reformer who ever lived, has this to say: "The natural method is the true and satisfying one, and moreover, the one best suited to the gardener, inasmuch as it saves much time, and enables him to produce a ravishing effect in winter, and indeed at all seasons. * * The common way of exhibiting red pots and stages * * simply makes the infinite grace of vegetation impossible therein. And this in the very house which we place near the mansion to show the choicest treasures of our collection."

Besides the main conservatory there are also other greenhouses for the cultivation of roses, carnations, orchids and the general run of flowering and foliage stock, ferns and bedding plants, and also tanks for wintering aquatics.

There is no attempt at elaborate flower gardening, at the same time a good many coleuses, geraniums, alternantheras and other gay subjects are displayed in beds. And roses, lilies, gladioluses and like summer-blooming plants are freely grown.

W. F.

NOTICE.

—OF—

STOCKHOLDERS' MEETING.

CHICAGO, July 10, 1889.

Stockholders of the American Florist Company:

You are hereby notified that the annual meeting of the Stockholders of the American Florist Company will be held in Room 172, Tift House, Buffalo, N. Y., Thursday, August 22, 1889, at 3 o'clock P. M., for the purpose of electing directors and officers for the ensuing term, and for the transaction of such other business as may come before the meeting.

November 12-16, Philadelphia.—Chrysanthemum Show Pennsylvania Hort. Society.

November 12-14, Boston.—Chrysanthemum Show Mass Hort Society.

November 12-14, Orange, N. J.—Chrysanthemum Show New Jersey Floricultural Society.

November 12-16, Cincinnati.—Chrysanthemum Show Cincinnati Florist Club.

LINDENIA.—In the last number of this publication appear colored plates of *Zygopetalum Gibeziæ* N. E. Br.; *Masdevallia*

Shuttleworthi Rehb. f.; *Dendrobium Brymerianum* Rehb. f.; *Odontoglossum Halli* Lindl. var. *Lindenii*.

News Notes.

BALTIMORE.—Robert Patterson has sold out his florist business.

PROVIDENCE, R. I.—Robert Johnston the florist left June 26 for a trip to Europe.

KANSAS CITY, MO.—The loss of glass by hail on R. S. Brown & Son's greenhouses was 1,500 lights, not 800 as stated in last issue.

DETROIT.—Mr. and Mrs. Philip Breitmeyer left on the 9th inst for a three weeks' trip in the east to include all the prominent cities along the coast.

TORONTO, ONT.—The Toronto Electoral District Society's annual flower show will be held in the pavilion at the Horticultural Gardens July 24 and 25.

SAN FRANCISCO.—The *California Florist and Gardener* has been consolidated with the *Pacific Rural Press*, in which it will hereafter appear as a department.

FISHKILL, N. Y.—The firm of I. C. Wood & Bro. was dissolved July 1. The business passes into the hands of Lewis E. Eugene V. and Isaac J. Wood, sons of one of the members of the old firm. Wood Bros. will be the style of the new firm.

UPPER SANDUSKY, O.—On the afternoon of June 30 S. O. Streby had 2,000 10x12 single thick and 66 double thick lights of glass broken by hail. There was a steady fall of hail for half an hour; some of the stones were as large as walnuts; all his plants and vegetables were seriously injured. No insurance.

WILLIAMSPORT, PA.—The flood of June 1, which covered the entire city four to ten feet, and left mud and destruction behind, covered the greenhouses of Harry Chaapel five to seven feet, six feet in the seed store and four and a half feet in dwelling house. The entire stock of seeds were lost, plants not destroyed but damaged by the mud and water. Had the flood come May 1 instead of June 1 the loss would have been much more serious, but as it is the entire stoppage of business caused by the damage and delay of the mails has been a hard blow to all kinds of business.

Boston Notes.

Mr. James O'Brien, the treasurer of the Gardeners' and Florists' Club of Boston is seriously ill at his home in Jamaica Plain.

The committee in charge of the annual excursion of the club has decided on a trip to Downer Landing, a favorite resort in the harbor. The excursion will take place on Tuesday, July 30.

The annual "school order" was as usual divided among about ten of the prominent city florists. About three thousand of the graduates from the public schools were presented each with a bouquet at the expense of the city of Boston.

The weekly exhibitions of the Massachusetts Hort. Society from July 13 to September 7 inclusive, will be held one week earlier than the time specified on the schedule. This is necessitated by the earliness of the season. The display of Japan iris at the show on Saturday, June 29 was very fine. Those shown by W. C. Strong were superb, some blooms

measuring eleven inches across. J. L. Gardiner and A. H. Fewkes also showed magnificent specimens of the same flower, some of Mr. Fewkes' being seedlings of great merit. W. J. S.

Chicago.

A receiver is disposing of the stock of Hoyt & Erby, florists at 157 Wabash Ave.

Mr. R. W. Rathborne, an amateur at Hyde Park, has on his grounds this summer a very attractive feature in the shape of a hundred and fifty foot hedge of *Delphinium formosum*, with a row of *Salvia splendens* in front of it. Owing to the unfavorable season the salvias are not yet in good bloom, but the delphiniums alone make a handsome show and attract much attention.

Trade is dull as usual at this season. The weather is hot without any qualification and all the retail florists find to do is to fan themselves and make a lame attempt to appear comfortable.

Those in Chicago and vicinity who intend to go to the Buffalo Convention are requested to send their names to the secretary of the Florist Club, 54 La Salle street, that the committee may know how many to provide for. The Chicago Club would be pleased to have florists from other cities who will pass through here travel from this point with them.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advts. not admitted under this head.

— OUR —

Celebrated New Pedigree Seedling Roses

— FOR 1889. —

MRS. JAMES WILSON, (Tea). In this Superb Novelty we have the long looked for pure yellow "Catherine Mermel." The growth of the plant is very vigorous, the habit excellent, and the flowers, which are very large, are thrown up well above the foliage, and are produced in extraordinary profusion. A magnificent forcing Rose of First Quality.
Strong plants in 5-inch pots, \$2.00 each; 13 for \$21.00.

LADY ARTHUR HILL, (H. P.) This splendid new Rose is a seedling from Beauty of Waltham. Color rosy lilac, quite a new shade, unique form and a profuse blooming variety. Very superior.
Strong plants in 5-inch pots, \$2.00 each; 13 for \$21.00.

MR. JAMES BROWNLOW, (H. P.) A truly magnificent variety of very large size and good form. The color is brilliant carmine; very novel, and growth very robust. It is a marvelously free flowering variety on cut back plants, and is especially adapted for forcing.
Strong plants in 5-inch pots, \$2.00 each; 13 for \$21.00.

FIRST CLASS CERTIFICATES HAVE BEEN AWARDED TO THESE ROSES.

Descriptive list will be mailed Free on application to the raisers,

ALEX. DICKSON & SONS,
Royal Nurseries. NEWTOWNARDS, County Down, IRELAND.

Hail Insurance.

Among those who have lately become members of the Florists' Hail Association are the John A. Salzer Co., of La Crosse, Wis., and Julius Roehrs, of Charlton Hill, N. J., both of national reputation. The latter insures 33,000 square feet of double thick glass. The fact that men of this character are becoming members is enough to make the croakers eat their melancholy predictions.

Occasionally we meet a rare specimen who says: "We haven't had a hail storm in twenty years, come and see me after I get hit." When the life insurance agent calls no doubt this florist says: "I'm alive yet, call around and see me after I am dead." A parallel character is the one who having been hit by hail says: "We won't have another hail storm in twenty years to come, I guess I will wait." What would you think of the man who having been burned out talked in that style?

Hail insurance costs less than fire insurance and there is no reason why the Florists' Hail Association of America should not become in five years as rich and powerful as its German contemporary, which has been in existence forty-five years.

Mention American Florist

Substitution.

The first case of substitution which came to the attention of a veteran New York florist was at a public market in Baltimore many years ago. A market woman had a big clump of the old "grass pinks" under her stand, and when a gentleman with three children stopped to purchase a small clump of pinks for each of the children, giving them their choice of color, the woman supplied them with three small clumps, one "red," one "white" and the other "blue," each being broken from the same large clump under the stand.

It is related of a nurseryman of the present day that he considers his orders well filled if his men send trees bearing a name which commences with the same letter as that ordered. If out of plums he sends peaches; as far as the variety is concerned, that is entirely too trivial for an instant's consideration.

It is also stated that some of the large tree dealers send around a list of what they want for the season to various nurserymen to "figure on," and the one who figures the lowest gets the order. In order to figure low he substitutes liberally of what he has a surplus. The dealer again substitutes on his orders, and heavens only knows what the planter is lavishing his care on.

Catalogues Received.

G. J. Alberts & Co., Boskoop, Holland, plants and trees; Geo. W. Miller, Lake View, Chicago, plants; Jno. Laing & Sons, Forest Hill, London, England, plant novelties; Hillebrand & Bredemeier, Pallanza, Italy, seeds and bulbs; Ludwig Moller, Erfurt, Germany, garden supplies; Ellwanger & Barry, Rochester, N. Y., strawberries; Wm. Toole, Baraboo, Wis., seeds; Siebrecht & Wadley, New York, Orchids.

PANSY SEED. NEW CROP.

Orders booked now for delivery July and August at the following special rates:

TRIMARDEAU, choicest French mixed, unsurpassed in brilliancy of color and size of flowers, some measuring from 3 to 4 inches across. Price, per lb. \$25.00, oz. \$2.50, ½ oz. \$1.50, ¼ oz. \$1.00.

IMPERIALIS or **ODIER** Prize Pansies, 3 and 5 bloated, extra fine per oz. \$4.00, ¼ oz. \$1.50.

BLIGNOT'S NEW, spotted, large flowering show Pansies, somewhat smaller than Trimardeau, but of even more exquisite markings and richer colors, pronounced by many the finest strain produced yet. This variety produces few seeds and is yet very scarce. Per lb. \$80.00, oz. \$8.00, ½ oz. \$4.00, ¼ oz. \$3.00, ⅛ oz. \$2.00.

CASSIUS 3 and 5 bloated Giant, extra. Per ¼ ounce \$3.00.

FAUST, King of the Blacks, fine for bedding. Per ounce \$1.00.

White or Yellow, fine strain. Per ounce 75c. Emperor William (blue); Lord Beaconsfield (purple). Per oz. \$1. Fine German mixed, lb. \$5.00, 50c. improved, extra large flowering mixed, lb. \$10.00, \$1.

Also French Bouquet Pyramidal Asters (dwarf), fine for cut flowers, in separate colors. Per lb. \$15.00, \$1.50. Mixed, per lb. \$12.00, \$1.25.

JAS. BACKHOUSE & SON

THE NURSERIES, YORK, ENGLAND,

invite the attention of the American trade to the following **SPECIAL STOCKS**, for which they have long been famous:

ORCHIDS.

Comprising Cattleyas, Lælias, Odontoglossums, etc., which they offer in established plants by the dozen, hundred or thousand. Disas (the finest stock of flowering plants in Europe), and other popular genera in choice leading kinds together with many rare and unique varieties.

FERNS.

These have long been a specialty, and our stock of Tree Ferns, Filmy Ferns, Gleichenias, Maidenhairs, and other popular kinds, is unsurpassed. Very moderate quotations can be given for grand specimen Tree Ferns; and for other kinds by the dozen, hundred or thousand.

Stove and Greenhouse Plants.

The leading kinds in large quantities. Special stocks of Red and White Lapagerias; specimen Camellias in all sizes, including large plants of Double Whites; Imantophyllums (Clivias), Eucharis, Azalea rosæflora and other fine varieties, Rhododendrons, etc.; together with extra strong plants of stove and greenhouse Climbers.

Alpine and Herbaceous Plants.

For many years we have given special attention to gathering together an extensive collection of the most popular plants of Old English gardens; whilst our collectors and correspondents in the Alps, Pyrenees, Tyrol and other mountainous districts of Europe; as well as in Asia Minor, the Caucasus, Turkestan and Siberia, India, Japan, Australia and New Zealand, have enriched our stock, which for extent and variety is unsurpassed in the Trade. Of Anriculas, Campanulas, Delphiniums, Fritillarias, Narcissi, Phloxes, Primulas, Pyrethrums, Spiræas, Iris, Hellebores, etc., etc. We cultivate the choicest kinds in large quantities.

Evergreen & Flowering Trees & Shrubs

in the best and hardiest varieties are extensively cultivated, including North American, Japanese and other CONIFERAE which our soil and climate admirably suit. Also Hardy Climbers in great variety.

FRUIT TREES

are also largely grown in the best and most productive sorts.

VEGETABLE SEEDS.

Peas, Broccoli, Cabbage, etc., of the newest and best varieties.

Our representative, MR. S. MARSHALL, expects to visit the States, arriving about end of July, and will be happy to wait upon purchasers, or send special quotations on application. Address, GRAND CENTRAL HOTEL, NEW YORK CITY.

AMERICAN FLORIST CO.,

CHICAGO.

The Social Florists' Club of New Jersey.

An association with the above title has been organized with Summit, N. J., as headquarters. Mr. J. N. May, the originator of the scheme, having generously erected a howling alley and reading room upon his place for the use of the association.

The object is to bring together florists and the horticultural fraternity in general for mutual improvement and enjoyment. Two nights each month have been set apart for the reading and discussion of papers.

Messrs. W. A. Manda and I. Forstermann have linked hands with Mr. May and with their united and substantial support it will prove an undoubted and assured success. The duties of secretary were conferred upon Mr. A. Dimmock, Summit, N. J. Nearly fifty members were enrolled at the first meeting.

TOTTENHAM, LONDON, ENGLAND.

The June Floods.

In the awful destruction of life and property caused by the June floods in several of the states it is likely that many florists are numbered among the victims.

In Williamsport Harry Chaapel was flooded to the depth of about five feet in his store and also in his greenhouses.

In Johnstown Alvar Akers lost his life in the fearful flood that carried away so much of that thriving town; and Robert Leupke only saved himself and family by getting them through the upper windows to the roof of an adjoining house and from there to a third one when the second one started down stream, meanwhile his greenhouses, plants, household goods, clothing, etc., were all swept away. He has since decided to move to East Liverpool, Ohio.

Pittsburg was just west of the flood limit and suffered no loss from this cause. M.

As to Lottery Tickets.

"When June comes in the florists will find enough to do between the June weddings and school graduations, but just now there is a lull, so that they find time to go once in a while to the base ball game and to the auction sales, to visit their neighbors, and to buy an occasional Louisiana Lottery ticket. Some of them seem to have phenomenal luck in the lottery line."

From "Boston Notes," page 492, June 1 issue AM. FLORIST.

"Embezzler Flann kept a precise account of every dollar he stole, expecting to make up the thefts some day by a big strike in the Louisiana Lottery. Deluded youth. The victims this lottery has lured to destruction are legion, and yet it manages to elude the law and keep right on in its nefarious work."

From Pittsburg Commercial Gazette, June 27.

The boys had better stick to base ball and let the lottery tickets alone. M.

HUGHES'
SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc., if used as directed. Used as a WASH it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.

THE BUFFALO CONVENTION.—The time is rapidly approaching when the Society of American Florists will again meet in annual convention, and there is every reason to believe that the fifth annual meeting will show the usual increase in attendance over preceding conventions. A most excellent programme has been prepared, the convention hall is admirably adapted to the purpose, the exhibition hall is under the same roof, hotel accommodations are ample and

cheap, a rate of a fare and one third for the round trip on the certificate plan has been secured, and the beautiful city of Buffalo offers open handed hospitality.

Arrangements for the Coming Convention.

The local committee has secured rates as follows from Buffalo Hotels:

Hotel.	Can accom- modate.	Rate. Am. plan
Tift House, Headquarters, Tift House Block.	150-175	\$.30 00 \$
Iroquois, Eagle and Main Sts.	300	\$.35 00-4 00
The Niagara, Porter Ave. and Seventh St. 120 . . .	350-450	\$.35 00-4 50
The Genesee, cor. Genesee and Main Sts. 125-150. . .	300-350	\$.35 00-3 50
Mansion House, cor. Exchange and Main Sts. 75 . . .	300	\$.30 00
Stafford House, Washington and Carroll Sts. 50-75 . . .	200	\$.20 00
Tucker's Hotel, Exchange and Michigan Sts. 30-40. . .	200	\$.20 00
United States Hotel, cor. Terrace and Pearl Sts. 75-100. . .	150-200	\$.15 00-2 00
Eagle House, Washington and Eagle Sts. 40-50. . .	200	\$.20 00
Gruener's Hotel (German), 20 East Huron St.	40-50	\$.20 00
Southern Hotel, Michigan and Seneca Sts. 40-50. . .	150	\$.15 00
St. John's House, 39 East Swan St.	40	\$.15 00
Tremont House, Washington and Seneca Sts. 60 . . .	150	\$.15 00
Brinswick Hotel, Exchange and Wash. Sts. 50 . . .	150	\$.15 00
Billmore House, Michigan and Carroll Sts. 40 . . .	150	\$.15 00

Applications for rooms may be made direct to the hotels, or to Thomas Clayton, chairman hotel committee, 90 Richmond avenue, Buffalo, N. Y.

RAILROAD RATES.—To secure the rate made by the passenger associations when going to the Buffalo convention this month you will pay full fare going and when purchasing your ticket ask for a certificate of such purchase from the agent selling you the ticket. This when countersigned by the secretary at the convention will be an order to the Buffalo agent to sell you a return ticket at one third fare. Ticket agents are supplied with blank forms for the certificates. Don't neglect to secure one properly filled out when purchasing your ticket as otherwise you will not secure the reduced rate on the return trip. Orders for return tickets at the reduced rate will be good up to and including the 26th, three days after the final adjournment on the 23d.

FROM BOSTON TO BUFFALO.—The delegation from Boston to the Buffalo meeting will leave at 3 p. m. Monday, August 19, via Hoosac Tunnel and West Shore railroad. New England members who wish to join should send their names at once to the secretary, W. J. Stewart, Boston, or to the vice-president, L. H. Foster, Dorchester, and berths on sleeper will be reserved for them. Railroad fare for the round trip \$14.20.

FROM CHICAGO TO BUFFALO.—Advantageous arrangements have been made for transportation to Buffalo. The party will leave at 3 p. m. Sunday, August 18, by one of the most popular routes, reaching Buffalo the following morning. Special cars will be provided and dining car will be attached to the train at 6 p. m. Florists west of Chicago who can arrange to travel from this point with the party are cordially invited to do so. Drop a card to G. L. Grant, 54 La Salle street, Chicago, and berth will be reserved for you.

THE CONVENTION SUPPLEMENT will be mailed with next issue and extra copies distributed at Buffalo. Advertisements for it should be sent as early as possible, reaching us by August 7 at latest; earlier will be better.

Programme for the Buffalo Convention.

The official programme for the Buffalo meeting of the Society of American Florists has been issued. We give it below:

TUESDAY, AUG. 20, 1889.

FIRST DAY—MORNING SESSION, 10 O'CLOCK.

Address of welcome, Hon. Philip Becker, Mayor of Buffalo—Response, Mr. A. P. Calder, Boston—President May's Address—Reports of Secretary and Treasurer—Reports of Standing Committees—Reports of Special Committees—Miscellaneous Business—Discussion of President's Address.

FIRST DAY—EVENING SESSION, 7 O'CLOCK.
ESSAY.—Roses: W. C. BARRY, Rochester, N. Y.
Discussion.

QUESTION BOX.

ON ROSES.

What varieties of roses of recent introduction are specially useful to the florist? Reply by E. G. Hill, Richmond, Ind.

Will the Rose-bug commonly found in greenhouses survive freezing? Reply by Chas. P. Anderson, Flushing, N. Y.

Southern grown Rose Bushes. A. C. Oelschig, Savannah, Ga.

What is the best way to keep Green-fly from Roses without fumigating.

Where does the Rose-bug deposit its eggs?

Perles and other Roses on the Banksia and similar stocks—are they preferable to those on own roots?

MISCELLANEOUS.

The influence of soil on Carnations—what is the effect of transplanting from light to heavy soil, or vice versa? Reply by Wm. Wayne, Kennett Square, Pa.

What are the best varieties of Azaleas for Christmas blooming?

What is the best method of raising fine Miguouette in winter?

Can any of the following plants be profitably grown in winter for cut flowers: Rogiera cordata, Rondeletia speciosa, Hemerocallis, Ranunculus, Anemone, Aster?

Winter blooming Heaths.
What is to be recommended as new or promising for the cut flower trade?

WEDNESDAY, AUG. 21, 1889.

SECOND DAY—MORNING SESSION, 9 30

Selection of place of meeting for 1890
—Nomination of officers for ensuing year.

ESSAY—*Elevation of our Business*, ROBERT CRAIG, Philadelphia, Pa.

Discussion.

ESSAY—*Education*, H. H. BATTLES, Philadelphia, Pa.

Discussion.

SECOND DAY—EVENING SESSION, 7 O'CLOCK.

ESSAY—*The Establishment of an Experimental Garden*, JOHN THORPE, Pearl River, N. Y.

Discussion.

QUESTION BOX.

What are the necessary qualifications for properly filling the following situations: 1. Grower in commercial green-houses. 2. Head gardener on a private estate. 3. Florist in a public institution. 4. Superintendent of public parks and grounds. Reply by Peter Henderson.

Is the sale of flowers in the streets of large cities an injury to the general business of the stores? Reply by F. M. Huutsman.

Is the practice of advancing prices of cut flowers on special occasions injurious to the trade. Reply by J. C. Vaughan.

What per cent over cost should be a general basis for prices in conducting a retail cut flower trade. Reply by John Westcott.

How can local clubs and the national society best work together to promote their common interests? Reply by J. D. Reynolds.

Can the general florist engage to advantage in the hardy plant and shrub business for lawn decoration? Reply by Wm. Scott.

Palms, ferns and decorative plants, their value in floral decorations. Reply by M. H. Norton.

It what way can a florist most successfully start in business in a country town?

What hardy and half-hardy plants may be used for decorative purposes in severe weather?

Can the Society do anything to regulate the prices of bedding plants throughout the country?

THURSDAY, AUG. 22, 1889.

THIRD DAY—MORNING SESSION, 9:30.

Election of officers.

ESSAY—*Useful Summer Blooming Flowers*, A. E. WHITTLE, Albany, N. Y.

Discussion.

ESSAY—*Horticultural Exhibitions*, EDWIN LONSDALE, Chestnut Hill, Pa.

Discussion.

THIRD DAY—EVENING SESSION, 7 O'CLOCK.

ESSAY—*Landscape Gardening*, Wm. McMILLAN, Buffalo, N. Y.

Discussion.

ESSAY—*Orchids, The Natural Habitat of the Leading Varieties*, J. FORSTERMAN, Summit, N. J.

QUESTION BOX.

What is the best method of caring for wrought iron boilers when not in use? Reply by M. A. Hunt, Terre Haute, Ind.

What are the results of experiments with water gas? Reply by J. T. Temple, Davenport, Ia.

What are the advantages of the electric light?

What is the experience in the use of petroleum?

Best method of packing plants for express?

Materials for flues?

How to prevent waste in fuel?

FRIDAY, AUG. 23, 1889.

FOURTH DAY.

The fourth day will be devoted to social enjoyment. The great feature of the day will be an excursion to Niagara Falls, 23 miles distant from Buffalo. The Buffalo Florist Club will arrange for an excursion train, and procure lowest rates for trip and incidentals at the Falls. On return to the city a collation will be tendered the Society by the Buffalo Club. A large hall, capable of seating the whole company at once, will be provided. A base ball game and other diversions will follow.

Philadelphia.

At the last meeting of the Florists' Club Mr. W. W. Coles, of Lansdowne Heights, delivered an address on "Grafted Tea Roses for winter blooming." Mr. Coles after one winter's careful trial of grafted roses, alongside roses on their own roots, has come to the conclusion that there is no difference. He fully expected to note an improvement with W. F. Bennett, but there was none. The subject for the next meeting is: "What can the members of the Florists' Club of Philadelphia do to advance the interests of the S. A. F. at the approaching convention to be held in Buffalo in August?" President Robert Craig was selected to prepare and deliver the paper.

A trip through Craig & Bros.' extensive establishment at Forty-ninth and Market streets, revealed the fact that this enterprising firm has a finer lot of palms this season than ever. The house which was planted in camellias for a number of years has had to give up those old fashioned and at one time most popular flowers to make room for arecas, latanias, kentias and the phoenixes, as also have one or two houses, which for some time past had yielded fine blooms of the H. R. roses, Jacqueminot, Magna Charta, Baroness Rothschilds, Merveille de Lyon and Captain Christy. A house full of Mrs. John Laing, I think, still remains to delight the connoisseur with its delicious fragrance and delicate coloring for a few more winters to come.

To return to palms, what a sensible move it is to grow these and kindred plants, and especially the varieties in quantity that have proven so useful for the adornment of homes in the dull and dreary winter season. Many of Philadelphia's florists are adding them to their stock. In addition to the old reliables, H. A. Dreer, Craig & Bro., Charles D. Ball and David Fergusson & Sons, Messrs. Alburger Bros., W. K. Harris, J. William Colfesh and John Burton have each a fine stock of the best varieties. All palm growers and buyers have awarded the palm to Mr. Burton for the best lot of *Areca lutescens*. And Mr. Harris holds his own as the best exponent of the culture of *Pandanus Veitchii*.

Before this is in press all the florists will have planted their roses and their houses will be put in order preparatory to the trip to Buffalo. A very general disposition to go prevails and a good time is confidently expected.

H. A. Dreer is adding more green-houses to his already very large establishment. Craig & Bro. are building one. John Burton has rebuilt three, two rose houses and one for smilax in the most approved and substantial manner. H. C. Woltemate has plans out for a new rose house after the style of the best built in these days.

C. S. Price and Coles & Whitely, of Lansdowne Heights, will plant very few

American Beauty and Bennett roses, whereas A. L. Pennock & Son, of the same place, will increase the area devoted to the Beauty. C. F. Evans' Rowlandville nurseries are not planting quite so many of Beauty and Bennett as heretofore.

Craig & Bro. are planting about the same number each of the last named and have planted quite largely of "Wootton," Duchess of Albany and Mme. Hoste. The latter will not, from present indications, be of much service for late spring or summer blooming. It is small and off color. Its friends claim that it will amply make up for these shortcomings in the winter season when the buds are of more value.

Mr. M. F. Gallagher, the genial florist from Chicago, is "doing" the town. He is in the hands of Mr. D. D. L. Farson, who welcomes any brother florist at his cosy office at Horticultural Hall. Mr. Julius Roehrs, of Rutherford, N. J., and Mr. J. M. Keller, of Bay Ridge, N. Y., spent a few days here last week. They are very much interested in palms.

Commodore Westcott, of the Rose Bud Fishing Club, has announced that the annual excursion to the fishing grounds of Barnegat Bay will take place the first week in August. It is expected that the club will be in session five days. Vice Commodore James Dean, of Bay Ridge, will be present, and it is to be hoped that Ernest Asmus, of West Hoboken, and John N. May, of Summit, will favor the club with their presence as they did last year. E. L.

Boston Notes.

The retail florists all close at 5 p. m. during July and August.

Trade at the sea side resorts has been very light this season.

L. Prang & Co. have issued a beautiful little pamphlet on "Our National Flower." It is artistically illustrated with colored plates of the trailing arbutus and golden rod.

David Allan is justly proud of an unusually brilliant variety of *Epidendrum vitellinum*. One spike in bloom at present bears twenty-two flowers.

A very severe hail storm struck in this vicinity July 17. Greenhouses and garden crops suffered severely. Lynn and Newburyport appear to have sustained the most damage.

James Dennis, formerly of Mt. Auburn, and Walter Butler have gone into business together and are erecting two houses at Readville, on land close to the railroad station. Their specialties will be violets and carnations.

Thermopsis Caroliniana from the mountains of North Carolina, is a hardy perennial of great beauty, that has been recently introduced here. It promises to be exceedingly popular. Propagates readily from seed.

Mr. Samuel A. B. Bragg, superintendent of Mt. Hope Cemetery, died at his home in Dorchester July 17, at the age of 64. The news of his death was a severe blow to those who knew him. It falls to the lot of but few men to be so universally beloved. Of him it may truly be said that he had not an enemy. He was a member of the Gardeners' and Florists' Club of Boston, a delegation from which attended the funeral.

M. of Pittsburg, seems inclined to censure slightly in his note on "Lotteries" in the last number of the *FLORIST*. The writer, in humble imitation of the daily newspapers regarding the prize fight, would say that he is not in "favor of" lotteries "but must give the news." But M. must not feel too safe as

CARDS.

to base ball either. It is also a matter of news that "the boys" sometimes return from the ball games with less money than they had when they started.

W. J. S.

Chicago.

Mr. P. Transon, of P. & E. Transon, nurserymen, Orleans, France, paid this city a visit July 19.

A bed of geraniums over a third of a mile long is a feature at South Park this summer. It is about three feet wide and completely encircles the main bedding near the greenhouses.

Mrs. J. C. Vaughan and Miss Florence Vaughan have returned from a lengthy visit in California.

S. D. Bradford, of Colorado Springs, Colo., is here taking a look through the parks.

At the last meeting of the Florists' Club the social feature predominated. Eatables and drinkables of the kinds and sizes most affected by florists were provided and were heartily enjoyed. During supper an informal discussion as to the best ways and means of making the coming exhibition a success was carried on with the result of arousing much enthusiasm, and if the show is not an overwhelming success it will not be the fault of those who were present on this occasion.

Cards.

BY H. H. BATTLES.

Every florist should have a place set aside for blank cards and small envelopes where they can be kept from dust and moisture; it is generally better to put them in some convenient place that customers may help themselves.

Three sizes are found useful, quite small ones for gentlemen, medium for ladies, and you will often find it a great convenience to have a much larger size, for the use of clubs, firms, and their employes, when they send funeral designs. It is generally better taste to enclose the cards in an envelope addressed to the person that is to receive it.

When necessary to attach cards to designs it should be done as neatly as possible. We have often seen a hole punched with a knife, and a piece of wire run through. A better way is to make two eyelet holes and tie a piece of ribbon into a double bow-knot (as illustrated), then fasten the wire on the loop underneath. If it be a funeral design for an aged person a few sprays of wheat drawn through the bow is good; if for a child some simple little flower is pretty.

You will also find illustrated three cards which we offer as suggestions for dinner cards. The idea admits of many variations, and good opportunities of displaying taste. We have used them a

number of times with considerable success; the florist is not only credited with good taste, but he can be sure that the flowers used in this way harmonize with his other decorations; too often do elaborately colored dinner cards detract from the delicate tints of the flowers.

Florists who are fortunate enough to have many orders for "dinner decorations" know that there is considerable money expended for dinner cards, often very valuable souvenirs are given. Can not we florists divert some of this money, so that it will not only bring profit and credit to us, but pleasure to our customers? By giving this subject some thought, and exchanging ideas, we may be able to make the floral dinner card fashionable next season. Let us not make them too elaborate, but rich and chaste.

The writer of these articles thinks there will be no better opportunity for him to explain his position in offering these designs; he does not for a moment think them perfect, but looks upon them simply as suggestions put in tangible shape, open to criticism; and by such criticisms no one will be more willing to learn than himself. As the editor states in July 1 number, they are being written at his suggestion, and I feel confident he will gladly publish any notes that may be offered on the arrangement of flowers,

pointing out the defects of designs illustrated where they are weak, and how they can be improved.

Color has such a prominent place in the arrangement of flowers that the writer is always disappointed when he sees the photographs so colorless and flat, due consideration must be allowed for these two defects.

Notes From Washington.

BY WM. FALCONER.

THE BERTHOLDI Fountain was a present to the U. S. government. It was erected in the middle of the large lawn in the Botanical Garden. Noticing it there I asked Mr. Smith how could the garden afford to provide for such a magnificent piece of art? His reply was: "That reminds me o' an aul' Scotch wifie, Janet o' Auldearn; Her guidman, Sandy, cam' hame a' nicht an' he was awfu' fu; so woman-like, Janet started to berate him soundly. 'Whisht, whisht, Janet, woman,' implored her spouse, 'it's nae sae bad as that, the whuskey did na' cost me onything; I got it a' for nocht!'" And so it was with the fountain, it didn't cost the garden anything, the government paid for putting it there.

THE "INDIAN" MOUNDS AT MOUNT VERNON.—At the far end of the west lawn are two mounds, one in each corner. President Buchanan planted an elm tree on the top of the right hand mound, and a year or two ago Mrs. Grover Cleveland planted another elm—a graft from the Washington elm at Cambridge, Mass—on the other mound. Harriet Lane was present when both of these trees were planted. How these mounds came there can best be related in the words of General Washington's old gardener. "Thim mounds there mark the burial place o' two Indian chafes. They had fallen out and came to the Ginerl to have him settle their dispute. 'Git out there on the lawn an' fight it out,' was Washington's reply. 'Yis, sor, an' bedad they did. They fought there on the lawn till both were dead, and then the one buried the other under each o' thim mounds in the corners there.'"

THE MOTHER-IN-LAW PLANT is a name suggested by Mr. Smith for the dieffenbachia. It happened in this way: At a horticultural exhibition at Baltimore some years ago a newspaper reporter wishing to get some points about the plants, buttonholed Mr. Smith. Mr. S. in the course of his explanations came upon the dieffenbachia and began telling the reporter the effect of the dumb cane (the old name for the dieffenbachia) upon the tongue of any one who should be unfortunate enough to taste it. A bright light sprang into the poor scribe's eye, for no doubt he was a victim, and he exclaimed, "Oh what a splendid plant it would be for a mother-in-law!" Mr. S. at once saw the point, and advised him to call it the Mother-in-law Plant, which the newspaper man did for all it was worth. And next day thousands of people rushed to the exhibition and gladly paid their quarter for the privilege of beholding the salve for their domestic affliction.

THE COMMERCIAL WORTH OF THIS NAME.—At an auction sale of plants at Pittsburg soon after that, Mr. Smith tells me, the auctioneer was crying out in despair—"Who'll give me twenty-five cents for this beautiful plant, the Dieffenbachia Seguine?" and no bidders. A gentleman present suggested to him to put it up by its new name, the Mother-

in-law Plant. He did this and inside of two minutes every plant was sold for seventy-five cents a piece.

UNDER THE name of Begonia Gibsoni I have for the last 13 years grown the double-flowering evergreen sort which is sometimes catalogued as B. Gilsoni, and I attributed its origin to Mr. Gibson, an English collector and for many years superintendent of one of the London parks. But Mr. Smith says I am mistaken, and that he himself not only is the author of the name Gilsoni, but also the one who gave me (in 1876) my first plant of it.

ITS HISTORY is this: Mrs. Livingston, a lady from New York state and who had a colored gardener named Gilson, sent a piece of a new double-flowering begonia which her gardener had raised, to Mr. Smith for his opinion and wished him to suggest a name for it. Mr. Smith, in compliment to the gardener who raised the plant, named it after him, Begonia Gilsoni. And he informs me that it is the only contribution to horticulture, he knows of, that has been given by a colored man.

DOLICHOS JAPONICUS is the fastest growing vine I know of; the vines will run 40 feet in a year. The leaves are large, trifoliate, on long petioles. The flowers don't amount to anything. The plants are herbaceous and make new vines every year. It is a hardy (even with us in New York) perennial. Capital for quick effect. It is much used about Washington. At Major Cranebrook's I saw it used as a greenery against the stable wall. But I don't like it for this purpose. Our ivies and ampelopsis are unsurpassed for covering walls; and for dense foliage vines the Aristolochia Siphon and menispermums are better than the dolichos.

THE STRAUSS COMPANY are building immense additions to their greenhouse establishment. Evidently rose growing pays. They use steam heating and are eulogistic in its praise. Some of the Furman boilers with pipes and connections had just arrived and were ready to be put in.

THE HOUSES are large, wide, high-roofed, roomy and well raised above the ground, and the lights are exceptionally large. The pitch of the roof on the front side is 45°, on the north side it is flatter. This insures a large measure of light and heat and freedom from drip. And although the new houses are ranged in front of each other, no two of them are joined together, but all are some distance apart from one another, and as they are built on sloping ground no one of them shades the other.

THEIR ROSES looked fine, and finest of all was Wootton. It was still in bloom and about the only one in flower.

THE CLARK BOYS are an industrious trio. Their greenhouses are beside and in front of Strauss'. They grow roses, also a miscellaneous collection of flowering and furnishing stock, and handle their plants with skill and success. It was well nigh 8 p. m. when we called there, and we left those young men tearing into the loam pile with barrows and shovels and sweating like race horses, for they were making up their rose benches. This is just the material out of which successful florists evolve. The elder brother used to be with Mr. Smith at the Botanical Gardens, and Mr. S. tells me he was one of the best and smartest practical men he ever had.

The Gardens of the Agricultural Department, Washington.

These are the gayest in the city. The large acreage of grass lawns, the undulated character of the ground and the multitude and great assortment of trees, including groups, lines and individuals, render a display of color desirable, providing it is kept together, and this is just what Mr. Saunders has done. A water course is filled with aquatics, and in it *Nymphaea tuberosa* and *N. odorata* are in full bloom; *Nelumbium speciosum* is hardy and growing with the luxuriance of a spatter dock, and the water chestnut (*Trapa natans*) has become an unwelcome weed.

The large greenhouses are filled with an assortment of economic plants and some decorative ones. Considerable space is devoted to growing and propagating pine apple plants for distribution in Florida and elsewhere where they will thrive. A full set of all the choice varieties cultivated in Europe has been imported and are being multiplied with despatch; suckers and tops are in more demand than fruits, but Mr. S. tells me he cut some 10-pounders last year. A large span-roofed greenhouse is devoted to grapevines, not so much for the fruit as for the wood for propagating purposes. There are also several other greenhouses used for propagating, and one filled with orange trees.

Saul's Nurseries, Washington.

Mr. Saul has a seed and florist store on Seventh street, the principal business thoroughfare in the city, also greenhouses and extensive nursery grounds a few miles out of town. The street railway is now being extended out as far as the nurseries.

This is an old-fashioned nursery on an old-fashioned plan, and perhaps carries a larger assortment of plants than any other concern of the kind in the country. If you can't find any particular plant you want, just send to Saul of Washington, and most likely you may get it. John Saul is a florist of the old school, apart from plants as a business commodity, he loves plants and keeps them because he loves them.

He does a large business in orchids and imports heavily. But he tells me he feels the depressing effect of the rafts of orchids that are disposed of at the auction marts in New York. And his orchids looked well. He was fixing them up. At this time of year when the greenhouses are emptied of other material a little time and more room can be spared for these aristocrats among plants. His cypripediums in addition to having been potted in moss were plunged in a bed of moss; this is to keep all evenly moist and lessen the daily drenchings of water.

Salt in the greenhouse benches; where the workmen were cleaning up things, I noticed they had spread a heavy coating of rough salt over the gravel on the plant benches. This was to kill any worms or other vermin that might be lurking there.

Elliottia racemosa is a shrub from Georgia. It had gone out of flower but its unfamiliar face attracted my attention. It was growing in the open nursery and seemed perfectly hardy there and to enjoy its quarters. Mr. S. was very enthusiastic over it. "Send us a plant" of course was the result. Some may laugh at me and say it won't be hardy with us in New York, it will die sure. Well, perhaps it will perish, but the experience won't, and that's worth a quarter.

VACCINIUM STAMINEUM

Clematis Stans is a hardy herbaceous non-climbing species, two feet high, and with small, pale blue, fragrant blossoms. It was in full bloom, and I wanted to buy it, but John wouldn't sell it as it was his stock plant. Little plants are well enough, but I have a weakness for big blooming plants right away. This is an illustration of a florist of the old school, a man who has plants and flowers in his heart as well as in his pocket.

Hedera dentata is a very large leaved handsome ivy and it was growing beautifully against a north-facing wall. Mr. S. assured me it is the hardiest of all ivies, and this I can readily believe as it is the largest leaved, for it is proverbial that the larger the foliage, the hardier is the ivy. It is different from *Hedera Røgnieriana* which also is a very large leaved ivy, and much grown. In the *London Garden* of July 6, page 7, and just to hand I find this ivy illustrated and described.

A bed of *Lilium auratum* in bloom out of doors caught my eye, but on investigation I found they were grown in pots and the pots plunged. And, really, this is about the only sure way of dealing with this capricious lily. You needn't tell me about instances where you have seen it in the most magnificent condition year after year grown out of doors. I've so seen and had it myself, and then disease would suddenly appear and sweep the field. But grown in pots it is always good.

Hydrangea Thunbergii was in fine bloom as a hardy shrub. Its flower heads are "single" and bluish and produced in great profusion. This shrub is hardy at

Boston, and should be grown by everybody who cares for summer flowers. Even if it be cut to the ground in severe winters it starts afresh in spring, and in June blooms out gayly. *Hydrangea hortensis* does not always do this. W. F.

Vaccinium Stamineum.

The subject of this engraving is an ericaceous shrub from two to four feet high, native from Massachusetts to Georgia in dry woods. The flowers are conspicuous for their long straight anthers, projecting far beyond the short spreading white corolla with pointed lobes.

The berries are of a greenish white color and scarcely edible. The plant blooms from May to June and is one of our most beautiful small-flowered ericaceous shrubs, and might be profitably forced for cut flowers. Like all the ericaceous shrubs it is of slow growth, plants seldom flowering in less than three years, but plants might be collected in their native localities and grown in the nursery one or two years when they would be fit to use. I think this is a shrub that enterprising nurserymen would do well to look up whether for the shrubbery or for forcing.

JACKSON DAWSON.

Arboretum Notes.

IV.

Twenty minutes ride from the Boston station of the Boston & Providence R. R. brings us to Forest Hills station. Alighting here, turning to the right up the road into the grounds and past the handsome

stone building of the Bussey Institute, down a little path through the shrubbery across the nursery grounds, then over the meadow by a winding path through the clover and daisies, up over the hill and we come in sight of the little propagating house where all the grafting and seeding for the Arnold Arboretum are done.

As we approach the potting shed the familiar tap, tap, tap of the little pots on the bench is heard, and passing in we find ourselves in the presence of the presiding genius of the place, the best informed man in this country on the propagation of trees and shrubs, Jackson Dawson.

A hearty welcome we are sure of, and Mr. Dawson is always ready no matter how busy he may be, to stop and reply to the same old questions that he has doubtless answered hundreds of times before, to go with you through the grounds, up and down the nursery rows, directing your attention to this or that shrub, its flowers, fruit, history or its value for one purpose or another, and to impart useful information such as no one else can impart and in a manner which he alone is master of.

Here in this unpretentious little greenhouse 40x20 feet heated by a little Hitchings conical boiler, are accomplished veritable wonders of propagation. Seeds are constantly arriving from all parts of the world, and they must be tough seeds indeed that will not waken into active life under the skillful hands of Mr. Dawson. The seeds are first sown in pots, pans or boxes, and as they come up are pricked off into shallow boxes, the soil used being composed of about equal parts of sand, loam and peat.

Most of this seed sowing is done in the winter. Many kinds are very slow to germinate, some taking two years before showing signs of life. During all this time they are carefully watched, covered with damp sphagnum and kept moist all summer long, and on the approach of winter are placed in frames until about February 1, when they are removed to the house, and under its encouraging warmth soon come up. Some of the coarse hard-shelled seeds, such as the plums, crataeguses and tulip trees, are put in boxes of wet sand where they are allowed to remain a long time to slowly soften them.

The stocks for grafting, when it is known in advance what will be required, are kept over in small pots from spring, the best results being always obtained where the stocks are thoroughly rooted in the pots. Most of the grafting is done from December to May, beginning with the evergreens and ending with the deciduous trees.

The yearling grafts and seedlings are packed away in the fall on shelves in a pit, where they are aired occasionally through the winter to guard against excessive dampness, and in spring are set out in rows in the "infant" nursery, and one year afterward are in proper condition to be planted in the regular nursery rows or where they are to remain permanently. Forty to fifty thousand seedlings are thus produced and handled annually. There are seven acres of nursery under cultivation in botanical order and scarcely a weed is to be seen. In the infant nursery there are at all times not less than twenty thousand young plants of all descriptions, seedlings, grafts, layers, etc. and these are all transplanted and replaced annually.

In the propagating house are to be seen now over a thousand *Andromeda*

speciosa which were sown last February and are now two inches high, several thousands of the "high-bush" blueberry, which, by the way, are commonly regarded as very difficult to start, an equal number of tiny *Rhododendron maxima* and *Berberis Thunbergii*, about twenty newly found species of roses, besides new varieties of clematis, pyrus, spiraea, prunus, etc. in large numbers.

Mr. Dawson shows among his newest acquisitions vigorous grafted plants of *Pinus ponderosa*, a magnificent pine with needles nine inches long, which originated as a chance seedling at Mr. H. W. Sargent's place at Fishkill Landing. Also a new weeping Ginkgo tree, known as *G. biloba pendula*.

What becomes of this vast accumulation of young trees and shrubs? From five to seven thousand go in exchange annually to the various agricultural colleges and experimental stations in this country and in Europe and Japan. There is a great and increasing demand abroad for American stuff. Large quantities of seeds and plants are received in exchange or from interested collectors. Dr. Regel, of the Imperial Botanic Garden at St. Petersburg, is one of the largest contributors, and a considerable quantity is also received from Kew gardens.

The larger part of the young plants, however, are set out as fast as the grounds can be got ready, on the slopes and banks of the Arboretum Park, which is fast becoming one of the grandest features of Boston's park system. With the exception of the roadways and policing which the city of Boston assumes, the whole work is conducted under the supervision and at the expense of Harvard University.

WM. J. STEWART.

Boston, July 8, 1889.

Plants for Decorating.

I see that Mr. Ball omits from his list of palms *Chamærops gracilis*, one of the very best of its class, low, compact and bushy, the base breaks all around with young plants and makes a solid filling very desirable in many situations. *Phoenix sylvestris* is also a good tough plant and strong grower. Don't overlook *Phoenix canariensis* if you want something you can bang around; it stands lots of abuse, anything except freezing; it stands the hottest sunshine in vases or bedded out in tubs.

For outdoor decorating *Areca lutescens* and *Latania borbonica* are worthless here, but for house decorating *Areca lutescens* is first on the list. No doubt some varieties of palms that are useful in the east would be of no use for outdoor summer decorating in the west. Mr. Ball's excellent article covers those best for house decorating only. Will not he or some other eastern palm grower give us a list of palms and other decorative plants that are most valuable for use in vases, on lawns, etc. Western florists would undoubtedly like to try any they have not yet had.

ROBERT S. BROWN.

Kansas City, Mo.

Geranium Bruanti.

Mr. James McKenna in *FLORIST*, July 1, asks if there is any difference between *Geranium Double Gen. Grant* and *Bruanti*. Perhaps that depends upon where the stock of *Bruanti* is purchased.

Last year I had both growing in the same bed and failed to see any difference, but this year I purchased *Bruanti* of another dealer and find it rather more double, much brighter and altogether a

decidedly better geranium. A few days of damp weather completely ruins the entire truss of *Double Gen. Grant* while *Bruanti* stands damp weather well and soon recovers. GEO. H. HENDERSON.

Dover, N. H.

Tuberous Begonias.

I have forwarded to you by express to-day a box of blooms of my seedling tuberous begonias. The plants from which these flowers were gathered have been raised from seed sown on the 9th of January last. After growing on the seedlings in a greenhouse and hardening them off well we planted out several thousands of them in beds in the open air on the 20th of May. They have grown pretty well since then and are now

INTERIOR OF LOW GREENHOUSE OR PITS

coming nicely into bloom. The light colored varieties are later in blooming than the high colored ones, and the yellows the latest of all.

I sowed a lot of choice seed early last summer, but not early enough to have strong plants in time to set them out of doors, so I grew them along during summer in cold frames slightly shaded. Early in September I lifted and potted them and brought them into a light greenhouse in which I used a little fire-heat night and day. They were a mass of bloom through October and November. I selected the ones with the strongest constitution and best shaped flowers in their respective colors for seeding, and saved all the seed possible about the middle of December. And it is from plants raised from this seed, as already stated, that the flowers I have sent to you have been gathered. T. G.

Hackettstown, N. J., July 2.

[A large and lovely lot of flowers, single and double, and ranging in color from glistening, velvety scarlet to pale pink; also shades of yellow. The largest single flower was $4\frac{7}{8}$ inches across. The double blossoms were very full; the largest rosette being two inches across. There is a bright future ahead for tuberous rooted begonias for summer gardening.]

Cost of Production.

Like many others I don't think that plants, even the commonest kinds of bedding plants, can be raised for thirty cents a hundred. To grow plants in large quantities requires a good supply

of stock plants, these are the raw material in a plant factory. It costs to produce the stock plants and to care for and prepare them several months beforehand. Even if grown outside in summer they have to be housed on the approach of winter and every square foot of space under a glass roof costs money.

The hand that writes this has time and again taken off, trimmed and put in propagating bed three thousand rose cuttings a day. Any one accustomed to the handling of small stuff can do the same thing, so that there is nothing extraordinary in the quantity of work reported to be done at Mr. Henderson's establishment, but who can say that that single day's work was one third or one fourth the cost of production.

There is a material difference in the cost of different kinds of plants that are raised from cuttings. Geraniums are one of the most costly of common things, on account of their leafiness, they require room. If any one can raise them for less than \$25 a thousand in $2\frac{1}{2}$ -inch pots I would like to know his methods.

Many kinds can be more cheaply raised from seed than by cuttings, by sowing in flats, transplanting in flats and finally potting. Many growers dispense with transplanting in flats, but transfer from the seedling boxes at once to small pots, but they don't get as good plants in the same time. Carnations are among the cheapest that can be raised from cuttings. For an early crop of these the grower has to sacrifice his blooms by cutting back, but for the general crop he can sell his flowers and get a good supply of cuttings from the same plants.

H. P. roses can also be very cheaply raised, where the plants are forced into bloom in winter and early spring for the sale of flowers as is now so extensively done. The flowers are generally disposed of at a good profit and from the same plants a good crop of cuttings can be obtained, which may be said to cost nothing for the care of the stock plants. The same, however, cannot be done with the monthly roses. For these the plants have to be, or at least ought to be, raised for the exclusive production of cuttings. Cuttings and blooms cannot be taken from the same plants without injury. Every healthy leaf taken from an evergreen rose while in a growing state is a damage to the plant.

Delaware, O., July 18.

E. FRYER.

Cost of Production.

The note on "Mr. Henderson's Plant Factory" may be all right, but it is misleading. The majority of florists don't stop to think of the actual cost to them of growing their plants, and many of the smaller florists can grow only one crop.

Place 10,000 plants in 2 inch pots as close together as they can be set and they will cover a space 4 feet wide and 100 feet long. If not sold when they had made a certain amount of growth they would soon be spoiled by crowding each other and becoming drawn. To give them sufficient room it would be necessary to take out one half, which would leave you 5,000 plants. It would not be long before this would have to be repeated and your space would contain only 2,500 plants. If treated properly they will by this time be in 3-inch pots nice bushy plants ready for sale, and I don't think that the grower could afford to sell them for less than \$60 per 1000. This would give him \$150 for the use of the space occupied and other expenses. I think that this is as low as they can be grown at a profit.

LOW GREENHOUSES, OR PITS

SECTIONAL VIEW OF LOW GREENHOUSES, OR PITS

A. Sash 6 x 4 feet. B. $1\frac{1}{4}$ -inch steam pipe. C. Cemented bench $4\frac{1}{2}$ feet wide. D. Walk 2 feet wide and $6\frac{1}{2}$ feet from ridge. E. Yellow pine gutter 10×4 inches. F. Front wall $3\frac{1}{2}$ feet high. G. Ground level.

I know that Mr. Henderson sells in large quantities, but he would have to have an immense market and then grow only a few varieties of soft stuff. As for seedlings the majority of florists could not sell them at any price. I think that \$15 is too low an estimate for care, firing, interest, etc., even for a common greenhouse with brick flue and certainly for a house put up as good as money can make it and heated by hot water or steam. Don't let the average florist or would-be plant grower think he can grow 1,000 plants for \$10 and get rich from his sales. He would find the balance on the wrong side very soon. ROBERT S. BROWN.

Kansas City, Mo.

Low Greenhouses or Pits.

EDITOR AMERICAN FLORIST:—In accordance with the promise that I made when you called on me a few weeks ago, I herewith send you a few notes with sketches of our low greenhouses or pits recently erected. There is nothing new in the plan, it is almost identical with what we and others have had in use for the past thirty years, except it be that instead of lifting the sashes individually for ventilation with an iron bar for a lever, we now apply the ordinary hoisting apparatus, so that every alternate sash on the south side can be lifted to a height of nearly four feet. This was the great desideratum in our first erections of these low houses, whether of fixed roofs or portable sashes, that for the purposes for which such houses are best adapted—the growing of hardy or half-hardy stuff—sufficient ventilation could not be obtained. These low houses are formed of sashes 6×4 , the glass is double thick, 10×14 . All sashes on the north side are screwed down, also every alternate one on the south side, the others being used for ventilation. This abundant means of ventilation makes such houses adaptable for any purpose that cold-frames or sunken pits are generally used for,

such as the growing of violets, pansies, daisies, bulbs of all kinds, or, in short, any plant whose nature rebels against a high temperature in a dormant state. For dormant hybrid roses, clematis, hydrangeas and carnations, we find them particularly useful, and we never before have had such satisfactory results from that class of plants.

The space occupied by these houses on our place is 300 feet long by 90 feet wide. The length is crossed by two potting sheds each 15 feet wide. As will be seen by the ground plan, the paths are sunk, the sides of which are held up by brick on edge laid in cement; the benches are all cemented, thus always presenting a clean, smooth surface on which to set plants. The posts supporting the yellow pine gutters are locust, so that houses so built, we believe will stand for at least twenty-five years, with but a trifle for repairs. The heating is done by steam, by three of Lord & Burnham's No. 5 hot-water boilers with a steam dome attachment. The two $1\frac{1}{4}$ -inch pipes in each house are attached to the gutter-plate, as shown in the plan, which is sufficient to keep out frost in coldest weather; if heated by hot-water it would require exactly the same amount of $\frac{1}{4}$ -inch pipe to do the same work. It is in such conditions as we have here, however, where steam has the advantage over hot-water, the extreme point to be heated being nearly 600 feet from the boiler pit, it would hardly be practicable to heat with hot-water at such a distance.

This block of pits was erected by Lord & Burnham, and cost \$7.50 per running foot, for each house, complete. This, of course, far exceeds in cost that of the ordinary sunken pits, which we used for the same purposes sometimes using them as sunken hotbeds, heating by manure, but two years' working of this new plant has convinced us that we would have been many thousand dollars in pocket had we made the erection a dozen years ago instead of bungling along with the

cold sunken pits, because, not only is there always loss by breakage, in matting up such pits, but often great loss to plants is sustained from snow storms when the pits have to be kept closed. As a matter of fact, although the area covered by these low houses is considerably less than what we had in sunken pits and cold frames, our output of plants has been more than doubled, and at much less expense in labor. Against that, of course, is the cost of fuel, which I estimate to be only about \$500, as the temperature is at all times low, but taken all together, it is perhaps the most satisfactory change in our greenhouse plant that we have ever made.

Although we use these houses only for half-hardy stock, and keep them at a low temperature, of course, they can be used for other greenhouse stock by increasing the heat; but for growing flowers in winter, or for growing plants requiring a high temperature, such houses are not so well adapted as the modern rose house, which I believe to be the best for any purpose of flowering or fruiting plants in winter. But most florists growing a general stock, always find a necessity for cold frames or retarding pits, and for such purposes, I doubt if this style of low greenhouses can be much improved upon.

PETER HENDERSON.

Jersey City, N. J., July 11, '89

[It should be added that surplus water drains into the cemented walk, and the houses having a slight fall the water flows easily in the side gutters to one end where it is carried off by a sewer. The rafters and ridge pole are of yellow pine. It will also be noted as shown in sketch of interior that each sash which is raised by the ventilating machinery is provided with two arms, one on each side. At the apex of the roof the two rafters and the ridge are solidly united by a small iron truss, which is undoubtedly of considerable value in strengthening the roof and keeping it in shape.—E.D.]

Greenhouse Heating.

In spite of all the information which has been given us by able men at the S. A. F. conventions and through the columns of the *FLORIST* on this subject many of us are still lamentably ignorant. I have been traveling around among florists considerably lately and have been constantly on the watch for points in regard to the heating question, being still in search of the most simple, thorough and economical system. I have no doubt many may think that enough has been said and written on this subject, but while I have learned much from the discussions I am anxious for more knowledge. It may be thought by some that by this time every one in the trade should know all about heating. Well, I do not, and the question of perfect heating is just as new and important to me as ever. I have several questions to ask, and I should be glad if those who can speak from personal experience would give the facts through the columns of the *FLORIST*, for I believe that others would be equally benefited.

1. Where houses are piped with heavy 4-inch cast iron hot water pipes can they be heated with low pressure steam as well as if the pipes were smaller, that is the sized pipes usually used for steam?

2. Where one set of houses is fitted with 4-inch cast iron pipe and another set with 1½ or 2-inch pipe can both be successfully heated by low pressure steam from the same boiler?

3. A set of houses is heated by hot water in both 4 inch and 2-inch pipes, on one boiler and consequently on one level, another set of houses on a level 1½ to 2 feet lower is to be heated, can the two sets of houses on different levels be successfully heated by low pressure steam (regulating by check valves) from one boiler, using say 1½ or 2-inch pipe in the houses on the lower level? Will the steam circulate properly?

In regard to the last proposition the main difficulties to overcome are the difference in size of pipe and the different levels. There are no doubt similar cases arising troubling readers of the *FLORIST* and authoritative answers will undoubtedly benefit others as well as myself.

H. A. SIEBRECHT.

New Rochelle, N. Y.

Greenhouse Walls.

To determine the value of greenhouse walls constructed of different materials as a protection against the weather four sections six feet long by four high were constructed in the new greenhouse recently erected at the Hatch Experiment Station, Mass. This account is taken directly from the report.

Section 1.—Concrete (Rosindale cement one part to three parts of sand.)

Section 2.—Hollow brick 9 inches thick.

Section 3.—Framed hollow wall covered with lining boards, building paper and sheathing on the outside; and the same, without the paper, on the inside.

Section 4.—Same as section 3, but the space was filled with dry fine shavings.

In each of these walls was made a space five inches wide and one foot long running to the center, in which were placed thermometers so protected as not to be affected by the inside temperature of the house. Other thermometers were placed upon the inside surface of the walls similarly protected from inside temperature.

The temperature of each kind of wall, both inside and surface, was recorded at 7:30 a. m., 3 p. m. and 9 p. m. The experiment continued from January 9 to

March 1, and the results are recorded in a table which is too long to reproduce.

The report continues: Much has been said and written as to the protective value of the building materials commonly used in the construction of greenhouse walls, but generally without facts or figures to substantiate the statements. After the extended observations recorded above we feel that we have facts and figures which lead to the following conclusions: 1st, That on the inside of the wall, the lined board walls, filled with shavings, give the best results, that with the hollow space being but little less valuable. 2d, That hollow brick and concrete walls are about equally valuable in protecting from cold, but not equal to the framed and board walls. As to the cost of construction there can be but little difference, and the important question of durability can only be determined after ten or fifteen years' service.

An experiment in glazing has been tried at the same place. A portion of the house was glazed with Gasser's patent zinc joints. These joints (which are illustrated, with method of using, in advertisement in the *FLORIST*) allow the glass to be laid flat on the sash bars, with little or no chance for the frost to act upon the putty as in lapped glass. No water can enter between the laps of the glass to start it from place when frozen, and no air can possibly enter no matter how strong the wind may blow. In glazing the strips were simply dipped in linseed oil and the glass tacked in place with ordinary zinc points; large points not being needed as with lapped glass. As no laps were made there is a saving of ½ to ¾ inch with each light of glass used. The drip of water that runs down the glass inside was found to be no more than with lapped glass.

Conclusions: 1. By the use of these strips there is a saving in glass. 2. The glass is more easily laid. 3. Less putty is needed. 4. The frost can not get under the glass as readily as when lapped. 5. The glass does not slip down if the lower light is well fixed in place. 6. No air can penetrate between the joints. 7. No more drip was observed than with the lapped glass.

The question of repairs in case of breakage seems not to have been considered. Perhaps others who have used this method can report upon that point. A perfectly practicable method of laying glass flat is much to be desired.

L. WIGHT.

Non-Inflammable Wood.

In the *Manufacturer and Builder* for May, appears a report of two professors at the Ghent University on a series of experiments and investigations in connection with rendering wood un inflammable. The following conclusions were arrived at:

"Although wood cannot practically be rendered so fire-proof as not to be destroyed by heat, it is very possible to deprive it, to a considerable extent, of the property of catching and communicating fire, and to this end it is sufficient to coat the wood with a suitable composition.

"In the majority of cases, coating with a brush is the only practical solution of the question, and the substances most to be recommended for use in this manner are cyanide of potassium and asbestos paint."

"ARE YOU going to the Buffalo convention?" "Why, certainly! Are you?" "Most assuredly!"

News Notes.

HAMPDEN, MD.—M. A. Hautske has built a new house 70x12.

SARNIA, ONT.—Jas. Macklin has built another grape house 50 x 15.

KINGSTON, ONT.—J. L. Nicol is preparing to build a new house 20 x 160.

ARLINGTON, MD.—T. V. Sutton has completed three houses 100x20 each.

ROCKLAND, ME.—A. I. Mather is building a commercial greenhouse 18x100.

DETROIT, MICH.—S. Taplin has just recovered from a severe attack of typhoid fever.

BROCKVILLE, ONT.—R. B. Heather is building two houses 20 x 100 to be heated by hot water.

GENEVA, O.—W. P. Simmons & Co. are preparing to erect two new houses to be 96 x 18 each.

ST. CATHERINES, ONT.—Mr. John Holder, the florist, was married July 1 to Mary A. Genge.

PHILADELPHIA.—H. A. Dreer has added two new houses 100 x 10 each, heated by steam.

MONTREAL.—Wilshire Bros. have purchased land on Mt. Royal avenue and intend to build thereon two greenhouses 95 x 13 each.

MINNEAPOLIS.—The Exposition directors have voted to offer \$400 in premiums for competitive floral displays by members of the local Florists' Club.

KANSAS CITY, MO.—Probst Bros. are putting up eight new houses each 90 feet long with latest improved ventilators for growing roses, ferns and orchids.

PROVIDENCE, R. I.—Four great beds of roses were the June attraction at Roger Williams Park. There are 1,100 plants in the four beds and include about 60 varieties.

YOUNGSTOWN, O.—E. Hippard has in course of construction five houses, one 100x22 and four 12x100. A fifty-acre tract in the northern part of the city is to be turned into a public park.

LONDON, ONT.—Jas. Gammage & Son are building two houses 20x100 each, to be heated by steam. Fred Dicks has completed two houses 20 x 100 and one 40 x 10, heated by hot water.

BALTIMORE.—John Donn is arranging to tear down his greenhouses and remove to rebuild on another location. R. Schmidt has completed two houses 70x18 each and commenced the erection of another 120x40.

WAVERLY, MD.—J. B. McLaughlin has built two new houses, 70 x 16 and 70 x 12 respectively. Joseph Wolf has added three houses 100 x 20 each, heated by steam. Wm. Patterson has in course of construction three houses 104x14 each.

HAMILTON, ONT.—Webster Bros. are building five houses, three 80x20, one 80x17 and one 40x10. Both hot water and steam will be used for heating. E. T. Townsend is preparing to add two houses 16x90 each, to be heated by steam.

LANCASTER, PA.—Wm. Rohrer, son of A. D. Rohrer, has put up three houses 135x20 and two 135x9 that are complete in every respect. A. D. Rohrer & Bro. are adding six houses 40 x 10. M. A. Bitner has built five houses 120 x 19, and Albert M. Herr is adding eight houses 100 x 9. All are heated by steam.

"YOUR CHOICE FOR A QUARTER."

WASHINGTON.—Field Bros. have purchased three acres of land north of Seventh street road on which they intend to build several large rose houses. Mr. Field will soon start on a two months' trip through Belgium and Germany. J. H. Small & Sons have built two palm houses 75 x 16 each. J. R. Fremian has added two houses 25 x 20.

KANSAS CITY, MO.—R. S. Brown & Son have bought two acres on Troost avenue for \$11,000, to which they will later remove their entire greenhouse plant. They will push the wholesale plant trade harder than ever the coming season. J. N. Kidd has taken a partner, the boys expect to give them a reception on his return from St. Louis.

SAN DIEGO, CAL.—The *Sun* relates how a Ventura lady commenced on a small plot of ground to grow flower seeds and met with such success that she has now ten acres devoted to the work and finds it very profitable. It is predicted that nearly all of the seeds and bulbs now imported from Europe will in time be supplied to the trade by this state.

LONDON.—The annual exhibition of the National Rose Society was held at the Crystal Palace July 6. There was an immense crowd at the show, many undoubtedly being attracted by the presence of the Shah of Persia. In spite of the very unfavorable weather this year for roses the exhibits were excellent, which spoke well for the skill of the exhibitors.

PITTSBURG.—The contract for the building of the aquatic house in the Allegheny Parks has been let to Thos. W. Weathered's Sons, New York, and work will be commenced at once. The floral decorations on the occasion of the recent meeting of the Elks are described by the local press as unusually elaborate. Ludwig & Richter, of Allegheny, did the work.

TORONTO, ONT.—J. H. Dunlop is building two rose houses 18x135 each. S. Tidy & Son have opened a store at 164 Yonge street, as has the Victoria Floral Co. at 569 Yonge street. Levi Taylor has built several new houses on Bolton avenue. P. Fogarty has added two houses 90x10 each and one 90x16. A. Fraser one 60x16. Cotterill Bros. are building one 20 x 130,

and H. C. Butterworth is preparing to erect one 20 x 150.

BOULDER, COLO.—The meeting of the State Horticultural and Forestry Association was held here June 19 and 20. The main exhibits were of fruits and vegetables, though some greenhouse plants, flowers and floral designs were shown. J. E. Hubbard took nearly all the premiums on greenhouse plants, W. W. Willmore first on collection of cut roses, M. G. Smith on hand bouquets and A. Gallup of Denver on floral designs.

BALTIMORE.—A number of the florists who have been in the habit of selling flowers on Eutaw street above Lexington were on July 6 prohibited by the police from putting up their stands. On the 8th the Gardeners' and Florists' Club met and appointed a committee to wait on the mayor and demand his protection. The following were the committee: James Pentland, chairman; Wm. Fraser, Wm. McRoberts, Wm. Sands, Robert Graham and Wm. Christie. They waited on the mayor with a petition signed by property-holders in favor of allowing florists to continue their sales. The mayor, after hearing the statement from the committee ordered them to occupy their stands as heretofore. Some have been selling in that locality twenty-six years under license. The florists at Waverly were jubilant at the mayor's decision in their favor. The difficulty first originated with the store-keepers on Eutaw street, who wanted the florists to vacate the street in front of their stores.

The Court Memorial Fund.

The treasurer reports amount of contributions received to this date \$231. The following is an extract from a letter written to the treasurer by a prominent English horticulturist: "Bravo America! What an agreeable surprise you have in store for the friends of the late Mr. Court in this country. Can I ask, is there any limit to the generous impulses of the American people? Can we hope ever to make them feel our gratitude? Can it be possible that they realize the bond of affection which they are creating in our breasts, to last not for a day, but forever? Had we only had the power to deliver this news to that dear, meek, manly soul, whose presence you are about to make us feel again and again."

"Your Choice for a Quarter."

"Four nice Luizets for a quarter;" wholesale price on the same day to the regular florists, \$2 per dozen. "Old roses," you say? Not a bit of it. Luizets fresh and quality good. This is no fairy tale, but an actual fact the past season.

The retail florists had the street fakir killed some time ago. They had him very much dead, but he seems to be an exceedingly lively corpse. Move him off the sidewalk and he takes to the street; off the street and he ensconces himself in a private doorway or vacant nook, where having got the consent of owner or lessee he is safe and can snap his fingers at policemen and florists alike.

It looks very much as if he had come to stay. And he has the best side of the bargain every way. He takes no orders ahead, hence is under obligations to nobody. And when "stuff" is scarce and prices high he just lays off somewhere and waits quietly for the turn in the tide, and he don't have to wait long either in these days of overproduction.

Watch the grower in the morning as he goes from store to store with his box of flowers. He is deliciously independent, he won't break prices, no, not for the world. But just follow him after he has gone the rounds and see him bring up at the fakir's. Listen to the trading now and you will have a treat. It is diamond cut diamond, but the wily fakir knows he has the last call, so in the end he is pretty sure to buy at his own price. He will soon be out on the corner with his bunches of flowers stuck in rows on a perforated board, almost under the very shadow of the poor chap who pays a high rent and three times as much as he for the same goods.

And does the conscience of the grower ever smite him? Oh, no, the fakir does a cash business and the jingle of the money has a fascination far exceeding that of due bills and book accounts, and has a wonderful effect upon consciences. Besides the grower has not forgotten how a year or so ago this same store florist coaxed him away in the fall from the commission man with smiles and wiles and cunning sophistry, and how afterwards when the spring time came and flowers became a drug in the market he had unceremoniously given him the bounce.

And won't the florist pay the grower off some day for his funny business with the fakir? Bless you, no. Next fall he will love him just as of old—so the everlasting see-saw between the growers and the dealers goes on, and the cunning street fakir rakes in the benefit. The boss street fakir of Boston is in Europe this summer traveling for pleasure, while his poor neighbors, the store keepers and the growers, say they can not afford to go to Buffalo this year. Who would not be a fakir? W. J. S.

Pacific Coast Notes.

On my recent visit to California, Oregon and Washington Territory, I was impressed with the beauty and vigor of the flowers, shrubs and trees, as well as with the fruitfulness of the orchards and vineyards. The effects of the currents of the Pacific Ocean on the climate on our western coast, even so far north as Alaska, is remarkable, and to this influence I largely attribute the success of the half hardy flowers and fruits. Fuchsias in San Francisco were often 15 to 20 feet high, and roses all along the coast were far more healthy and vigorous than in New York state. Shrubs and trees grow

successfully there as far north as Tacoma, W. T., without protection, which would perish in New York state under the same circumstances unprotected.

Golden Gate Park, San Francisco, embraces 1,300 acres, taking in a large mountain. It is not entirely completed, but as far as complete the work is effective and pleasing. As every plant must be irrigated the expense of maintaining is great.

The mountains along the stage road to the Yosemite valley are beautifully covered with forests, mostly "sugar pines" so called, many of enormous size. There are various spruces, firs and cedars often growing in fissures of rocks on abrupt mountain sides, where there is but slight trace of soil and where rain seldom falls. There was in June a profusion of flowers on these Sierra Nevada mountains, azaleas, lupines, Mariposa lilies, columbines, wild marigolds and others. Earlier in the season I am told these mountains are carpeted and ablaze with flowers, far more numerous than in June, when the soil becomes quite dry.

To say that certain flowers or fruits will thrive in a certain state is to make a wild statement of no value to the planter, for different sections of most states differ as widely as it is possible to imagine. For instance, Washington Territory west of the mountains has a moist, mild climate and is heavily timbered, while east of the mountain slopes the climate is very dry and there is no timber worth mentioning.

The Mariposa Big Trees (*Sequoia gigantea*), are wonderful. I measured one, 50 feet in circumference. There are 600 in the Mariposa Grove. It resembles the cedar in texture and color of wood, and is a conifer. CHARLES A. GREEN.

Rochester, N. Y.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By a first class rose grower, propagator and cut flower worker, with a large firm, will be ready August 15. Address E. C. PARTON, Denver, Col.

WOOTTONS.

WE HAVE STILL A FEW LEFT AFTER PLANTING 20,000 FOR NEXT WINTER'S CUT.

These 20,000 plants required 1,800 running feet of Greenhouses 16 feet wide, which we have erected at a cost of \$35,000, to be devoted exclusively to "WOOTTONS."

WHY WE PLANT THIS ENORMOUS NUMBER, AND WHY YOU SHOULD DO LIKEWISE :

Because it is the best red rose in the world.
Because it blooms continuously for the whole year.
Because it is as large as an American Beauty, and
Because it is of a much richer color.
Because it blooms best in winter.
Because with us it never has shown disease.
Because reports from hundreds of growers are favorable.
Because next winter it will pay four times the profit of any other rose.
Because the greatest profit will be this coming season.

Because it is no snare and delusion like hundreds of others that you and I have tried.
Because it has been thoroughly tested.
Because we offer it at reasonable figures.
Because red roses will take the lead this winter.
Because it is a home production.
Because it has taken first prizes whenever exhibited.
Because ALL THE FLOWERS ARE PERFECT, WITH LONG STEMS AND ELEGANT FOLIAGE.

REMEMBER THE \$300 PRIZE WHICH WE OFFER.

Plants in perfect order, from 3-inch pots, at \$180 per thousand; \$100 per five hundred; \$25 per hundred; less quantity, 50 cents each, during August and September.

THE AMERICAN FLORIST CO., Chicago.

GERANIUMS.

From a pigeonhole of this year's catalogues we selected eight that contained good sized lists of geraniums, and proceeded to condense the various lists into one. We imagined that after combining two of the longest lists those listed in the remaining catalogues would be mainly duplicates, but to our surprise the duplicates were comparatively rare, except in one instance where one list was an exact copy of another and it was evident that both catalogues were printed from the same copy, but this duplicate is not included in the eight catalogues mentioned above.

We found that in the eight catalogues selected there were listed 385 varieties of geraniums (zonals only), and that where duplicates did occur more often than not, the names were spelled differently, though most frequently sufficiently alike to identify them as one and the same to any one familiar with the names. It is quite probable that over 500 varieties of geraniums (zonals only) were listed in the American catalogues for 1889, and how many are the same variety traveling under two or more names and how many are so near alike that one or the other should be discarded? is an interesting question. That at least one half of those listed should be thrown out there can be but little doubt. Too frequently new introductions are no improvement on or are inferior to existing varieties and some means should be adopted to prevent the admission to our lists of new varieties until they have been passed upon by some competent authority who shall determine whether they are desirable additions. It would seem that this is a matter which the national society should consider.

We now propose to call attention to some of the vagaries of the geranium lists in the eight catalogues in question, among which are included those of our best known florists, and we trust that the errors to which attention is here called will not be repeated in the same catalogues for 1890.

In one catalogue we find listed "C. A. Kuorr," in another "Comte A. Kuorr," and still another "Contre-Admiral Kuorr." Lemoine gives it as "Contre-amiral Kuorr," which is undoubtedly correct and shows that of the American catalogues none of the three is correct. One catalogue has "Esperance," which is correct, and another has "I, Esperance," which is incorrect; one has "Gloire de Corbaux" and other "Glory de Corbenay;" one has "King Olga," another "Koniga Oglea" and another "Konigin Olga;" one has "Deruchette" as Lemoine gives it, and another has "Deruchute Lerbois" (abbreviation may be forgiven but adding on, never); others are "Emile de Girardin" and "Emil Girar-

din;" "Guillon Mangelle" and "Guillon Mangilli;" "Kate Patterson" and "Kate T. Patterson;" "Re Umberto" and "Umberto;" "Abricote" and "Apricote" (Lemoine gives it "Abricot") and so it might be continued into a lengthy list.

Why this lack of uniformity? Is it simply carelessness on the part of the compilers of catalogues? In any event it is a disgrace to the profession. Let us hope that more care will be expended upon the catalogues for 1890, and that lists will be more thoroughly weeded of kinds which should have been discarded long ago.

EXPRESS RATES.

We are pleased to state that a modification of the classification which went into effect June 15 has been made by the Traffic Committee of the Express Companies. The new rule reads: "Live plants of all kinds, boxed or crated so that they may be packed with other freight without damage, single merchandise rates. When not so packed not less than double merchandise rates." We received advice of this action shortly after we had gone to press for last issue and the new rule will undoubtedly be in the hands of all agents by the date of this issue.

The inconvenience and trouble to shippers caused by this disturbance in rates has been considerable, and it was all due to the hasty, ill-considered action of one official. It seems that this gentleman one day noted among the freight carried by his company a large rubber tree, some six or seven feet high, with no packing whatever, merely a tag with directions tied to its stem. It was an unwieldy thing to handle and extremely difficult to pack without injury, in fact could hardly be placed in the car in an upright position. After ascertaining that the plant was billed at a single rate he formulated the double rate classification which was adopted by the traffic committee, the members thinking that it applied only to plants in flower and specimen decorative plants. In fact when we laid the matter before one of the committee June 18, he attempted to convince us that small roses and similar plants were not "flowering and ornamental plants." Since that time however we have been advised of several cases where agents have exacted double rates on small plants tightly boxed.

As the case now stands open trays of plants and single specimens without any crating are still subject to the double rate, and we doubt the wisdom of an attempt to have these included in the single rate classification. It is a matter of regret that we overlooked shipments in baskets when formulating the modifying rule, as these make handy packages, but we are inclined to believe that convenient packages which can be easily handled and packed with other freight will be billed at a single rate. Should double rates be exacted on any such shipments advise us and we will lay the matter before the traffic committee.

TUBEROUS BEGONIAS.

Another and larger lot of blooms of tuberous begonias has been sent us by Messrs. F. J. Meech & Son, Charlevoix, Mich. Some forty varieties were represented in addition to fifteen unnamed seedlings raised by Mr. Meech.

Among the single varieties Prince of Wales (Laing), crimson, 4½ inches across; Duchess of Edinburgh (Laing), salmon, 4 inches across; Princess Louise,

white, and Mrs. Bellew (Cannell), deep rose, 3 inches across, were most noticeable, the color of the first named variety being unusually rich and velvety. So many of the doubles were of such excellence that it would be difficult to make a choice. Terre de feu (Lemoine), is dark pink, of very large size and very double; Clemence Denisart, a beautiful pink and fully as large; Rosamonde (Leguin), pink; H. Barnet (Laing), almost crimson, 3 inches across and very double; Goliath (Leguin), pink; Glow (Laing), scarlet; Jubilee (Laing), deep rose; Felix Crousse (Crousse), scarlet; Bouton d'or (Lemoine) rich yellow; Louis d'or (Lemoine), lemon yellow; Gabrielle Legros (Crousse), white with yellow tint; Mrs. French (Crousse), white; Mrs. Amy Adcock (Laing), scarlet with white center; Angles Sorel (Leguin), beautiful light pink; Mrs. Arnould (Arnould), rich pink; Thalie (Lemoine), small white; Little Beauty (Laing), dark rose; Longfellow (Lemoine), rose; Wm. Bealby (Crousse), scarlet with salmon shade; Le Grand Citoyen (Lemoine), dark scarlet; Ionia (Laing), red; Comtesse H. de Choiseul, pink; Gluck (Van Houtte), dark rose; Prince de Battenberg (Van Houtte), pink, of very large size. Several of Mr. Meech's seedlings are excellent, a single salmon pink 4½ inches across will undoubtedly find favor. Had anybody told us ten years ago that we would ever see begonias equal to any in this collection we should certainly have laughed at him.

For a selection of a half dozen double varieties we picked out the following (judging from the flowers and knowing nothing of the habits of the plants): Clemence Denisart, pink; Bouton d'Or, yellow; Lucy Closon, white; Jubilee, rose; Glow, scarlet; Terre de feu, dark pink. To complete ten varieties we added Rosamonde, pink; Mrs. Arnould, pink; Comtesse H. de Choiseul, salmon pink; H. Barnet, crimson.

GERANIUMS SUNLIGHT AND B. K. BLISS.—A correspondent writes that in his soil and with his treatment these two geraniums can not be distinguished as two varieties. Regarding the matter Mr. Thorpe writes: "Sunlight is not the same as B. K. Bliss. They are both chickens of mine. Sunlight is a shade lighter than B. K. B., the flower a trifle better shape, but B. K. B. surpasses it in size of flower truss and general good properties, and is two years younger." It is possible that our correspondent has received plants of one of these varieties under the two names. It may be a case of substitution or carelessness on the part of the party from whom he purchased, but is not a case of renaming.

THE BEST GERANIUMS.—In order to determine which geraniums are most valuable in all sections of the country for bedding we request each grower of these plants to drop us a postal card naming his best single scarlet, best double scarlet, best single pink, best double pink, best single white, best double white, best single any other color and best double any other color. Remember that the first requisite of a bedder is to stand the sun and look well through the summer. A full report can not fail to be of great interest and value to all in the trade. Don't neglect to do your share. It will cost you only a moment's time and one cent.

COST OF PRODUCTION.—On the blank form sent out for our plant trade reports we added a query worded as follows: "Have you kept a record of expense so

that you could determine the cost of producing bedding plants? If so give your estimate on the cost of producing good plants of geraniums in 4-inch pots; verbenas in 2½-inch pots; coleus in 2½-inch pots; alternantheras in 2½-inch pots." Out of the sixty replying to the other queries but eight had kept any accurate record, though several sent in estimates. An average of the reports received is as follows: Geraniums in 4-inch pots \$6 per 100; verbenas in 2½-inch pots \$2.50 per 100; coleus and alternantheras \$2 per 100. All of the estimates were very close to these figures, hence it may be considered a fair average.

HAIL INSURANCE.—Persons desiring to join the Florists' Hail Association at Buffalo should measure their glass before going to the convention. Measure your single and double thick glass separately, and the secretary will fill and receive your application on the spot. The directors and officers will impart whatever information may be desired to any one interested in hail insurance.

THIS ISSUE completes the fourth volume of the FLORIST, which shows an increase of twenty four pages over volume III. Volume IV bound in half leather uniform with previous volumes may be had by the 15th inst. at \$2.25 prepaid by mail or express.

SOME SPECIMENS of the "Dew Seedling" strawberry sent us by H. F. Dew, Lansing, Mich., were of unusually large size and excellent flavor.

CONVENTION SUPPLEMENT advertisements should be mailed to reach us by August 7 at latest, and as much earlier as possible.

IT PAYS to have a few things extra well grown, that your neighbors do not have. They will attract attention and make sales. B.

The Seed Trade.

SEED TRADE ASSOCIATION.

H. W. JOHNSON, Philadelphia, president; ALBERT M. McCULLOUGH, Cincinnati, secretary and treasurer. The eighth annual meeting at Saratoga Springs, N. Y., June, 1890.

CARL SCHMIDT succeeds Haage & Schmidt in the well known firm of that name at Erfurt, Germany.

TORONTO, ONT.—Steele Bros. & Co., the seedsmen, have opened a new retail store, 120x44 feet, on King street with an elevated conservatory 16x12.

RICHMOND, VA.—T. W. Wood & Sons have enlarged their seed warehouse by putting in five floors 75x25 with an elevator suitable to carry heavy seeds and bulbs.

ROCHESTER, N. Y.—Morehouse & Annis are making contracts for a new store, corner North A and Main street, with four floors 84x25 with steam elevator, to be completed October 1.

C. A. REESER in a personal card in his catalogue complains bitterly of competitors who have stolen his list of names valued at \$20,000 and cautions the public that the firm of ——— & ——— C ——— C ——— is the one referred to.

LATEST cable advices from Holland report tulips a short crop and scarce. This is contrary to the expectations of American growers and dealers who have generally reduced their orders. The week of hot weather early in May hurt the foliage and has caused most bulbs to ripen early.

NEW YORK.—The A. C. Nellis Company, seeds, at 64 Cortlandt street, is in the hands of Deputy Sheriff McGinnis, on two judgments for \$1,082, which President A. C. Nellis confessed to his attorneys and wife, the result of a quarrel between the president and some of the stockholders. The latter have elected another president in place of Mr. Nellis, and will try to have the judgments vacated. Mr. Nellis claims that these stockholders are trying to get possession of the company, to the detriment of the creditors. It is said the merchandise debts are only \$2,000. The company was incorporated in July, 1884, with a capital stock of \$50,000, succeeding A. C. Nellis Co., who had been in business at Canajoharie, N. Y., where the company's gardens have since been located. The Peroxide Silicate Company, at 422 West street, was sold out by Deputy Sheriff Anderson yesterday under two judgments aggregating \$1,345, realizing about \$750. The liabilities are reported to be about \$17,000, of which \$12,000 is due the treasurer, H. B. Farrington, for money advanced. The business has been established several years, and was incorporated January 13, 1888, with a capital stock of \$50,000. The company manufactured a preparation for destroying insects on plants. It is expected that the company will be reorganized.—*New York Times*, July 19.

NOW IS THE TIME to send in advertisements for the Convention Supplement, which we shall publish with next issue.

P. H. MEEHAN, the well known rose grower, is now located in Richmond, Va. Mr. Meehan has had good success in several large places in Illinois and ought to do still better where the climate is so well adapted for roses.

GERANIUM BRUANTI.—When I first got this geranium I set it down for Heteranthe (Double Gen. Grant), though I could hardly believe that the firm I bought of would knowingly send out an old plant under a new name. There is a great similarity, one could be easily sold for the other, yet there is a difference. In Bruanti the truss is more compact and a deeper scarlet. Both are good sorts, but Bruanti is the best with me.

Kansas City, Mo. ROBT. S. BROWN.

News Notes.

IONIA, MICH.—The Ionia Pottery Co. is manufacturing standard pots.

MEADVILLE, PA.—August Krueger sailed July 10 for an European trip.

DENVER, COLO.—C. R. Gallup lost nearly 5,000 feet of glass by hail during the last storm.

GRAND RAPIDS, MICH.—T. R. Renwick & Co. are building a new greenhouse 150x20.

SYRACUSE, N. Y.—I. E. Marquise has built three new houses, 50x18, 50x10 and 110x17½ respectively. Also an office 20x16.

MANHATTAN, KANS.—The Kansas State Agricultural College is arranging to build three greenhouses 70x11 each, to be heated by hot water.

WEST GROVE, PA.—Mr. Conard, of Dinee & Conard Co., is making a trip to Paris with Mrs. Conard. G. H. Leahy, of the same firm, was married July 1.

GREAT BEND, KANS.—Hail smashed 300 feet of glass on the greenhouses of Mrs. J. E. Patton June 15. The loss was promptly paid by the Hail Association, in which she held a policy.

WORCESTER, MASS.—H. F. A. Lange is building three new houses which will take 5000 feet of glass to cover. They will be devoted to roses. With this addition Mr. Lange has a total of 30,000 feet of glass.

NEW BRITAIN, CONN.—The horticultural society organized here last April has now on its rolls seventy-three names and applications are coming in at each meeting. The last meeting was held July 2.

NEW YORK.—At the annual meeting of the New York Florists' Club held July 10, the following officers were elected for the coming year: John H. Taylor, president; Julius Roehrs, vice-president; Chas. B. Weathered, treasurer; Wm. S. Allen, secretary.

NORMAL, ILL.—The Home Nursery company and Fruit-growers exchange, to grow and sell nursery stock, has been incorporated with headquarters here. The capital stock is \$75,000; incorporators, W. H. Schuman, Geo. A. Griggs, H. M. McKnight, J. I. Guthrie and J. E. Baker.

SAN FRANCISCO.—Spring plant trade was about 10 per cent larger than last year; no change in prices; increased demand for roses and palms; less call for

coleus and soft wooded plants; collections about as usual. In our semi-tropical climate many people propagate their own geraniums and other bedding plants, but something new and choice will always find a buyer.

LOUISVILLE, KY.—Jacob Schulz is rebuilding three houses 20x70 each with cedar and cypress. Ed. Morat is building eight more new houses 25x80 each for roses for winter flowers. George Morat has bought a new place next to Ed. Morat's and is preparing to build thirty new houses. Wm. Mann has just completed three new houses. Business here is dead at present.

NEW YORK.—The first orchid auction sale at August Rolker & Sons drew together quite a goodly company of both growers and amateur orchid men and very fair prices were realized. Mr. August Rolker, the senior member of the firm, was the auctioneer and he is not only efficient but seems anxious to be very fair in every way and courteous in his manner. If this auction business is to be continued, as in all probability it will be, it is well that there is at least some competition, and it is indeed surprising that another plant auction house was not opened before this.

BALTIMORE.—The Lutherville Nursery and Florist Company, of Baltimore county, was incorporated July 12. The capital stock of the company is \$50,000. The incorporators are: William H. Baldwin, Jr., Andrew L. Black, Chas. McRae, Lemuel T. Appold and E. J. Codd. The directors for the first year are: Charles Markell, Andrew L. Black, Alfred J. Carr, Charles McRae, David Abercrombie, George J. Storck and Lemuel T. Appold. Work has been commenced on the construction of three greenhouses on Seminary lane, in Lutherville, two of which will be 18x200 feet and one 18x150 feet. The houses will be heated by steam.

BUFFALO.—The Buffalo Florists' Club met July 12 to make further arrangements for the coming florists' convention. The following local committees were decided on: Reception committee, Thos. Clayton, chairman, and 16 assistants; committee on ball game, E. J. Mepstead, chairman, and two assistants; committee on entertainment of ladies, R. F. Lawrence, chairman, and four assistants; committee on printing and badges, E. J. Nolan, chairman, and three assistants; committee on excursion, lunch and entertainment, William Scott, chairman, and two assistants; bureau of information, J. W. Constantine, chairman, and three assistants; committee on decoration of convention hall, C. F. Christensen, chairman, and three assistants; committee on decoration of club rooms, W. A. Adams and three assistants.

THE WEST SHORE RAILROAD

TO THE BUFFALO CONVENTION.

THE WEST SHORE RAILROAD offers the direct and most popular route between NEW YORK and BUFFALO to the florists who contemplate visiting Buffalo at the time of the next convention, August 20 to 24, 1889, inclusive.

As a scenic route the "West Shore" is unsurpassed, passing as it does through the magnificent scenery on the west bank of the world famed HUDSON RIVER and the picturesque MOHAWK VALLEY. A view of these scenes alone is worth many times the cost of the journey.

The equipment in luxurious appointments and elegance of finish is unsurpassed. Magnificent Drawing Room and Sleeping Cars on all through express trains between NEW YORK and BUFFALO. No extra fare charged on any through fast express trains. The lowest rates of fare authorized will be granted to florists purchasing their tickets to Buffalo and return via West Shore Railroad.

Florists from BOSTON and NEW ENGLAND POINTS can secure through Sleeping Car accommodations to Buffalo via Fitchburg (Hoosac Tunnel Route) and West Shore Railroads. The Fitchburg Railroad is the only line running Sleeping Cars through between Boston and Buffalo in connection with the West Shore Railroad.

The following condensed time table shows departure of West Shore Trains from New York and intermediate points, and the arrival of these trains at Buffalo:

	P.M.	P.M.	A.M.	A.M.
Leave New York (H. Jay St., N. Y.)	5.00	8.00	9.40	1.40
" New York (H. W. 4th St.)	5.15	8.15	9.55	1.55
" Weehawken (West Shore Station)	5.30	8.30	10.10	2.10
" Cratons	5.45	8.45	10.25	2.25
" West Point	5.49	8.49	10.31	2.31

Address **THE STORRS & HARRISON CO.,** Painesville, Lake Co., Ohio.

Are You Going to the Convention?

"Are you going to the convention?" asked a live florist of another who was not quite alive.

"I don't think I will," was the reply. "What good will it do me, going there, spending money and losing time?"

"What good? Why, man, you don't know what good it will do you until you go yourself, but I will tell you what good it has done me. While attending these conventions for the last three years I have learned more than I had before in twenty years. I have made money and I have saved money through the Society of American Florists, and the AMERICAN FLORIST paper has been a regular good partner to me. You come and see my place now, you know how it used to look. Will you go this time?"

"Well, yes, I'll go this time, and if it does me any good I will join the society and stick to it. I don't suppose the loss of the amount the trip will cost would hurt me very bad for once."

"If you don't say afterward that you are glad you went and thank me for urging you I'll pay your expenses."

Both are now making preparations to attend the Buffalo convention. There are hundreds more that need a similar stirring up. H. A. S.

High Express Charges.

I have been paying high express charges on plants received right along without a murmur until now comes a case of plants from New York without a cover, with double former charges, \$5. Yes, I paid it, but I will buy no more orchids until—I thank you, I have just read your remarks page 550, and it occurs to me, suppose that plants packed with

dry moss in tightly covered case, billed "dead fern roots, moss and broken pottery" i. e. bill the other end of the plant, or simply as "plant roots." No reflection on the florist or live plants, and I don't blame the express company for exacting high charges for live plants standing upright in an open case or basket.

Chicago.

JOHN LANE.

Narcissus Poeticus Double.

Replying to your note on this variety, there are two sorts, one a great deal more lovely and valuable than the other. *Narcissus poeticus patellaris plenus* is one variety in which the seed organs are not entirely suppressed and which seeds freely with me; the red rim is always visible and the bloom much smaller. *Narcissus poeticus grandiflorum plenus* is quite a different plant. The flowers and bulbs are extra large, the latter flat at the base and the bloom snow white, very double and not a trace of seed organs or rim, the latter so thoroughly suppressed. The former is plentiful in England, the latter scarce unless in some Dutch gardens.

CONVENTION * SUPPLEMENT.

Our Annual Convention Supplement
will be published with the

AUGUST 15 ISSUE.

It will contain a sketch map of the city of Buffalo, give locations of Buffalo Hotels, with rates at each one, directions to reach points of interest, and other notes of value to visiting members.

— ADVERTISEMENTS —

for the Supplement should be received by **August 7 at latest**, and as much earlier as possible. **Rates** same as in the body of the paper: 10 cents per agate line; page \$42; half page \$21; column \$14; half column \$7; inch \$1.40.

Being mailed with the August 15 issue it will reach members before they start for the convention, and will be their friend, philosopher and guide on the way to and during the meeting. Extra copies will be distributed at the convention.

SEND IN YOUR ADVERTISEMENTS EARLY.

AMERICAN FLORIST CO.,

54 La Salle Street, CHICAGO.

St. Joseph, Mo.

After reading the rather conflicting report of spring sales from this city, which appeared in the last number of the *FLORIST*, I feel like making some explanation as to my part of it.

I keep a daily account of plant and cut flower sales, but separate; these are footed up at the end of each month, so that at a glance I can compare the month's sales with the corresponding month of other years. Now while this season our sales apparently run lighter, yet when I came to foot up the gross receipts from plants for the months of April and May I found there was an increase of a little over 19 per cent over the corresponding months of last year, which in my report I put in round numbers.

In geraniums I increased my stock fully one third over last year and as the season turned out I had that increase left on my hands. Finding there was an overstock of geraniums on the market and learning that my neighbors were cutting, I put the price down from \$2 per dozen to \$1.50 for 4 inch, which I consider is as low as this size can be profitably grown. I doubled my stock of alternantheras and other small bedding plants and sold out clean.

D. M. REICHARD.

500,000
CELERY
PLANTS

Extra strong well grown plants **WHITE PLUME**, **KALAMAZOO**, **GOLDEN DWARF**, **GOLDEN SELF-BLANCHING**, \$2.50 per 1000; \$2.00 in 5,000 or 10,000 lots.

THE EVERBLOOMING PRIMROSE OBSCURA.

Strong plants out of small pots, by mail or express, \$5.00 per 100; \$50.00 per 1000. Larger plants, out of 3 inch pots, by express, \$8.00 per 100.

NOTICE.—Every order is packed with the greatest of care, with my own personal attention, in the lightest possible way. I study to please all.

JAS. BACKHOUSE & SON

THE NURSERIES, YORK, ENGLAND,

invite the attention of the American trade to the following **SPECIAL STOCKS**, for which they have long been famous:

ORCHIDS.

Comprising Cattleyas, Lælias, Odontoglossums, etc., which they offer in established plants by the dozen, hundred or thousand. Disas (the finest stock of flowering plants in Europe), and other popular genera in choice leading kinds together with many rare and unique varieties.

FERNS.

These have long been a specialty, and our stock of Tree Ferns, Filmy Ferns, Gleichenias, Maidenhairs, and other popular kinds, is unsurpassed. Very moderate quotations can be given for grand specimen Tree Ferns; and for other kinds by the dozen, hundred or thousand.

Stove and Greenhouse Plants.

The leading kinds in large quantities. Special stocks of Red and White Lappagerias; specimen Camellias in all sizes, including large plants of Double Whites; Imantophyllums (Clivias), Bucharis, Azalea rosæflora and other fine varieties, Rhododendrons, etc.; together with extra strong plants of stove and greenhouse Climbers.

Alpine and Herbaceous Plants.

For many years we have given special attention to gathering together an extensive collection of the most popular plants of Old English gardens; whilst our collectors and correspondents in the Alps, Pyrenees, Tyrol and other mountainous districts of Europe; as well as in Asia Minor, the Caucasus, Turkestan and Siberia, India, Japan, Australia and New Zealand, have enriched our stock, which for extent and variety is unsurpassed in the Trade. Of Auriculas, Campanulas, Delphiniums, Fritillarias, Narcissi, Phloxes, Primulas, Pyrethrums, Spireas, Iris, Hellebores, etc., etc. We cultivate the choicest kinds in large quantities.

Evergreen & Flowering Trees & Shrubs

in the best and hardiest varieties are extensively cultivated, including North American, Japanese and other CONIFERAE which our soil and climate admirably suit. Also Hardy Climbers in great variety.

FRUIT TREES

are also largely grown in the best and most productive sorts.

VEGETABLE SEEDS.

Peas, Broccoli, Cabbage, etc., of the newest and best varieties.

Our representative, MR. S. MARSHALL, expects to visit the States, arriving about end of July, and will be happy to wait upon purchasers, or send special quotations on application. Address, GRAND CENTRAL HOTEL, NEW YORK CITY.

A Correction.

ED. AM. FLORIST;—A mistake occurred in my article in last issue which may mislead some readers. Like most florists I sometimes get mixed up in names and I wrote alopecurus instead of stenotaphrum, which latter I should have written. Therefore for Alopecurus aureus marginatus read Stenotaphrum Americanus variegatum. JOHN. B. KELLER.
Rochester, N. Y.

PANSY SEED. NEW CROP.

Orders booked now for prompt delivery at the following special rates:

TRIMARDEAU, choicest French mixed, unsurpassed in brilliancy of color and size of flowers, some measuring from 3 to 4 inches across. Price, per lb. \$55.00, oz. \$2.50, $\frac{1}{2}$ oz. \$1.50, $\frac{1}{4}$ oz. \$1.00.

Trimardeau, golden yellow, $\frac{1}{2}$ oz. \$1.50, 1-lb. oz. \$1.00, purple, $\frac{1}{2}$ oz. \$1.50, 1-lb. oz. \$1.00.

BUGNOT'S NEW, spotted, large, flowering show Pansies, somewhat smaller than Trimardeau, but of even more exquisite markings and richer colors, pronounced by many the finest strain produced yet. This variety produces few seeds and is yet very scarce. Per lb. \$60.00, oz. \$6.00, $\frac{1}{2}$ oz. \$4.50, $\frac{1}{4}$ oz. \$3.00, $\frac{1}{8}$ oz. \$2.00.

CASSIER'S 3 and 5 blotched Giant, extra fine. Per $\frac{1}{4}$ ounce \$3.00, $\frac{1}{8}$ oz. \$2.00.

FAUST, King of the Blacks, fine for bedding. Per ounce \$1.00.

White and Yellow, fine strain. Per ounce 75c.

Emperor William (blue); Lord Beaconsfield (purple). Per oz. \$1. Fine German mixed, lb. \$5, oz. 50c.

Improved, large flowering mixed, lb. \$10, oz. \$1.

We have a very fine lot of

Latania Borbonica

in 2 1/2-inch pots, two to three leaves, and until August 15th, we offer them to the trade at \$10 per 100; \$90 per 1000.

This is a good chance for florists to stock up for winter trade, with strong, thrifty plants at a low price.

HUGHES' SOLUBLE FIR TREE OIL.

FLORISTS AND NURSERYMEN SHOULD
NOT BE WITHOUT IT.

Unsurpassed as an insecticide, it kills effectually all parasites and insects which infest plants whether at the roots or on the foliage, without injury to tender plants; such as ferns, etc., it used as directed. Used as a WASII it imparts the gloss and lustre to the foliage which is so desirable on exhibition specimens.

It kills insect life on man, animal, or plant, without injury to the skin, wherever parasites may appear.
